## 1.1. What is NPP ?

NVIDIA NPP is a library of functions for performing CUDA accelerated 2D image and signal processing. The primary set of functionality in the library focuses on image processing and is widely applicable for developers in these areas. NPP will evolve over time to encompass more of the compute heavy tasks in a variety of problem domains. The NPP library is written to maximize flexibility, while maintaining high performance.

NPP can be used in one of two ways:

- ▶ A stand-alone library for adding GPU acceleration to an application with minimal effort. Using this route allows developers to add GPU acceleration to their applications in a matter of hours.
- ▶ A cooperative library for interoperating with a developer's GPU code efficiently.

Either route allows developers to harness the massive compute resources of NVIDIA GPUs, while simultaneously reducing development times. After reading this Main Page it is recommended that you read the [General API Conventions](#) page below and either the [Image-Processing Specific API Conventions](#) page or [Signal-Processing Specific API Conventions](#) page depending on the kind of processing you expect to do. Finally, if you select the [Modules](#) tab at the top of this page you can find the kinds of functions available for the NPP operations that support your needs.

*What is NPP? [general\\_conventions\\_lb](#) [nppi\\_conventions\\_lb](#) [npps\\_conventions\\_lb](#)*

### 1.1.1. Files

NPP API is defined in the following files:

### 1.1.1.1 Header Files

- ▶ npp.h
- ▶ nppdefs.h
- ▶ nppcore.h
- ▶ nppi.h
- ▶ npps.h

All those header files are located in the following CUDA Toolkit's directory:

```
/include/
```

### 1.1.1.2 Library Files

NPP's functionality is split up into 3 distinct library groups:

- ▶ A core library (NPPC) containing basic functionality from the npp.h header file as well as common functionality used by the other two libraries.
- ▶ The image processing library NPPI. Any functions from the nppi.h header file or the various header files named "nppi\_xxx.h" are bundled into the NPPI library.
- ▶ The signal processing library NPPS. Any function from the npps.h header file or the various header files named "npps\_xxx.h" are bundled into the NPPS library.

On the Windows platform the NPP stub libraries are found in the CUDA Toolkit's library directory:

```
/lib/nppc.lib
```

```
/lib/nppial.lib
```

```
/lib/nppicc.lib
```

```
/lib/nppidei.lib
```

```
/lib/nppif.lib
```

```
/lib/nppig.lib
```

```
/lib/nppim.lib
```

```
/lib/nppist.lib
```

```
/lib/nppisu.lib
```

```
/lib/nppitc.lib
```

```
/lib/npps.lib
```

The matching DLLs are located in the CUDA Toolkit's binary directory. Example

```
* /bin/nppial64_111_<build_no>.dll // Dynamic image-processing library for 64-bit
↳Windows.
```

On Linux platforms the dynamic libraries are located in the lib directory and the names include major and minor version numbers along with build numbers

```
* /lib/libnppc.so.11.1.<build_no> // NPP dynamic core library for Linux
```

## 1.1.2. Library Organization

Note: The static NPP libraries depend on a common thread abstraction layer library called cuLIBOS (`libcutilibos.a`) that is now distributed as a part of the toolkit. Consequently, cuLIBOS must be provided to the linker when the static library is being linked against. To minimize library loading and CUDA runtime startup times it is recommended to use the static library(s) whenever possible. To improve loading and runtime performance when using dynamic libraries, NPP provides a full set of NPPI sub-libraries. Linking to only the sub-libraries that contain functions that your application uses can significantly improve load time and runtime startup performance. Some NPPI functions make calls to other NPPI and/or NPPS functions internally so you may need to link to a few extra libraries depending on what function calls your application makes. The NPPI sub-libraries are split into sections corresponding to the way that NPPI header files are split. This list of sub-libraries is as follows:

- ▶ NPPC, NPP core library which MUST be included when linking any application, functions are listed in `nppCore.h`,
- ▶ NPPIAL, arithmetic and logical operation functions in `nppi_arithmetic_and_logical_operations.h`,
- ▶ NPPICC, color conversion and sampling functions in `nppi_color_conversion.h`,
- ▶ NPPIDEI, data exchange and initialization functions in `nppi_data_exchange_and_initialization.h`,
- ▶ NPPIF, filtering and computer vision functions in `nppi_filtering_functions.h`,
- ▶ NPPIG, geometry transformation functions found in `nppi_geometry_transforms.h`,
- ▶ NPPIM, morphological operation functions found in `nppi_morphological_operations.h`,
- ▶ NPPIST, statistics and linear transform in `nppi_statistics_functions.h` and `nppi_linear_transforms.h`,
- ▶ NPPISU, memory support functions in `nppi_support_functions.h`,
- ▶ NPPITC, threshold and compare operation functions in `nppi_threshold_and_compare_operations.h`,

For example, on Linux, to compile a small color conversion application `foo` using NPP against the dynamic library, the following command can be used:

```
nvcc foo.c -lnppc -lnppicc -o foo
```

Whereas to compile against the static NPP library, the following command has to be used:

```
nvcc foo.c -lnppc_static -lnppicc_static -lcutilibos -o foo
```

It is also possible to use the native host C++ compiler. Depending on the host operating system, some additional libraries like `pthread` or `dl` might be needed on the linking line. The following command on Linux is suggested:

```
g++ foo.c -lnppc_static -lnppicc_static -lcutilibos -lcudart_static -lpthread -ldl
-I <cuda-toolkit-path>/include -L <cuda-toolkit-path>/lib64 -o foo
```

NPP is a stateless API, as of NPP 6.5 the ONLY state that NPP remembers between function calls is the current stream ID, i.e. the stream ID that was set in the most recent *nppSetStream()* call and a few bits of device specific information about that stream. The default stream ID is 0. If an application intends to use NPP with multiple streams then it is the responsibility of the application to use the fully stateless application managed stream context interface described below or call *nppSetStream()* whenever it wishes to change stream IDs. Any NPP function call which does not use an application managed stream context will use the stream set by the most recent call to *nppSetStream()* and *nppGetStream()* and other “nppGet” type function calls which do not contain an application managed stream context parameter will also always use that stream.

All NPP functions should be thread safe.

Note: NPP 12.1 is the last release of NPP which will support NPP API calls that do not contain NPP stream context parameters. Also NPP will soon release an API variant that provides collapsed combined parameter versions of many API calls. For example a call like *nppiAdd\_8u\_C3R\_Ctx(pSrc1, nSrc1Step, pSrc2, nSrc2Step, pDst, nDstStep, oSizeROI, nppStreamCtx)* will become *nppiAdd\_Ctx(NPP\_8U, NPP\_CH\_3, pSrc1, nSrc1Step, pSrc2, nSrcStep2, pDst, nDstStep, oSizeROI, nppStreamCtx)*. This makes adding support for new data types and number of channels simpler as well as significantly reducing redundant documentation.

Note: New to NPP 11.6 are

```
nppiContoursImageMarchingSquaresInterpolation_32f_C1R_Ctx
```

```
nppiContoursImageMarchingSquaresInterpolation_64f_C1R_Ctx
```

Note: New to NPP 10.1 is support for the fp16 (`__half`) data type in GPU architectures of Volta and beyond in some NPP image processing functions. NPP image functions that support pixels of `__half` data types have function names of type 16f and pointers to pixels of that data type need to be passed to NPP as NPP data type `Npp16f`. Here is an example of how to pass image pointers of type `__half` to an NPP 16f function that should work on all compilers including Armv7.

```
nppiAdd_16f_C3R(reinterpret_cast<const Npp16f *>((const void *) (pSrc1Data)),
↪ nSrc1Pitch,
               reinterpret_cast<const Npp16f *>((const void *) (pSrc2Data)),
↪ nSrc2Pitch,
               reinterpret_cast<Npp16f *>((void *) (pDstData)), nDstPitch,
               oDstROI);
```

Application Managed Stream Context Application Managed Stream Context

Note: Also new to NPP 10.1 is support for application managed stream contexts. Application managed stream contexts make NPP truly stateless internally allowing for rapid, no overhead, stream context switching. While it is recommended that all new NPP application code use application managed stream contexts, existing application code can continue to use *nppSetStream()* and *nppGetStream()* to manage stream contexts (also with no overhead now) but over time NPP will likely deprecate the older non-application managed stream context API. Both the new and old stream management techniques can be intermixed in applications but any NPP calls using the old API will use the stream set by the most recent call to *nppSetStream()* and *nppGetStream()* calls will also return that stream ID. All NPP function names ending in `_Ctx` expect application managed stream contexts to be passed as a parameter to that function. The new `NppStreamContext` application managed stream context structure is defined in `nppdefs.h` and should be initialized by the application to the Cuda device ID and values associated with a particular stream. Applications can use multiple fixed stream contexts or change the values in a particular stream context on the fly whenever a different stream is to be used.

Note: NPP 10.2 and beyond contain an additional element in the `NppStreamContext` structure named `nStreamFlags` which MUST also be initialized by the application. Failure to do so could unnecessarily reduce NPP performance in some functions.

Note: NPP does not support non blocking streams on Windows for devices working in WDDM mode.

Note that some of the “GetBufferSize” style functions now have application managed stream contexts associated with them and should be used with the same stream context that the associated application managed stream context NPP function will use.

Note that NPP does minimal checking of the parameters in an application managed stream context structure so it is up to the application to assure that they are correct and valid when passed to NPP functions.

Note that NPP has deprecated the `nppicom` JPEG compression library as of NPP 11.0, use the `NVJPEG` library instead.

### 1.1.3. Supported NVIDIA Hardware

NPP runs on all CUDA capable NVIDIA hardware. For details please see [http://www.nvidia.com/object/cuda\\_learn\\_products.html](http://www.nvidia.com/object/cuda_learn_products.html)

## 1.2. General Conventions

### 1.2.1. Memory Management

The design of all the NPP functions follows the same guidelines as other NVIDIA CUDA libraries like `cuFFT` and `cuBLAS`. That is that all pointer arguments in those APIs are device pointers.

This convention enables the individual developer to make smart choices about memory management that minimize the number of memory transfers. It also allows the user the maximum flexibility regarding which of the various memory transfer mechanisms offered by the CUDA runtime is used, e.g. synchronous or asynchronous memory transfers, zero-copy and pinned memory, etc.

The most basic steps involved in using NPP for processing data is as follows:

1. Transfer input data from the host to device using

```
cudaMemcpy( . . . )
```

2. Process data using one or several NPP functions or custom CUDA kernels
3. Transfer the result data from the device to the host using

```
cudaMemcpy( . . . )
```

### 1.2.1.1 Scratch Buffer and Host Pointer

Some primitives of NPP require additional device memory buffers (scratch buffers) for calculations, e.g. signal and image reductions (Sum, Max, Min, MinMax, etc.). In order to give the NPP user maximum control regarding memory allocations and performance, it is the user's responsibility to allocate and delete those temporary buffers. For one this has the benefit that the library will not allocate memory unbeknownst to the user. It also allows developers who invoke the same primitive repeatedly to allocate the scratch only once, improving performance and potential device-memory fragmentation.

Scratch-buffer memory is unstructured and may be passed to the primitive in uninitialized form. This allows for reuse of the same scratch buffers with any primitive require scratch memory, as long as it is sufficiently sized.

The minimum scratch-buffer size for a given primitive (e.g. *nppsSum\_32f()*) can be obtained by a companion function (e.g. *nppsSumGetBufferSize\_32f()*). The buffer size is returned via a host pointer as allocation of the scratch-buffer is performed via CUDA runtime host code.

An example to invoke signal sum primitive and allocate and free the necessary scratch memory:

```
// pSrc, pSum, pDeviceBuffer are all device pointers.
Npp32f * pSrc;
Npp32f * pSum;
Npp8u * pDeviceBuffer;
int nLength = 1024;

// Allocate the device memroy.
cudaMalloc((void **)&pSrc, sizeof(Npp32f) * nLength);
nppsSet_32f(1.0f, pSrc, nLength);
cudaMalloc((void **)&pSum, sizeof(Npp32f) * 1);

// Compute the appropriate size of the scratch-memory buffer
int nBufferSize;
nppsSumGetBufferSize_32f(nLength, &nBufferSize);
// Allocate the scratch buffer
cudaMalloc((void **)&pDeviceBuffer, nBufferSize);

// Call the primitive with the scratch buffer
nppsSum_32f(pSrc, nLength, pSum, pDeviceBuffer);
Npp32f nSumHost;
cudaMemcpy(&nSumHost, pSum, sizeof(Npp32f) * 1, cudaMemcpyDeviceToHost);
printf("sum = %f\n", nSumHost); // nSumHost = 1024.0f;

// Free the device memory
cudaFree(pSrc);
cudaFree(pDeviceBuffer);
cudaFree(pSum);
```

## 1.2.2. Function Naming

Since NPP is a C API and therefore does not allow for function overloading for different data-types the NPP naming convention addresses the need to differentiate between different flavors of the same algorithm or primitive function but for various data types. This disambiguation of different flavors of a primitive is done via a suffix containing data type and other disambiguating information.

In addition to the flavor suffix, all NPP functions are prefixed with by the letters “npp”. Primitives belonging to NPP’s image-processing module add the letter “i” to the npp prefix, i.e. are prefixed by “nppi”. Similarly signal-processing primitives are prefixed with “npps”.

The general naming scheme is:

```
npp<module info><PrimitiveName>_<data-type info>[_<additional flavor info>](
↪<parameter list>)
```

The data-type information uses the same names as the Basic NPP Data Types. For example the data-type information “8u” would imply that the primitive operates on *Npp8u* data.

If a primitive consumes different type data from what it produces, both types will be listed in the order of consumed to produced data type.

Details about the “additional flavor information” is provided for each of the NPP modules, since each problem domain uses different flavor information suffixes.

## 1.2.3. Integer Result Scaling

NPP signal processing and imaging primitives often operate on integer data. This integer data is usually a fixed point fractional representation of some physical magnitue (e.g. luminance). Because of this fixed-point nature of the representation many numerical operations (e.g. addition or multiplication) tend to produce results exceeding the original fixed-point range if treated as regular integers.

In cases where the results exceed the original range, these functions clamp the result values back to the valid range. E.g. the maximum positive value for a 16-bit unsigned integer is 32767. A multiplication operation of  $4 * 10000 = 40000$  would exceed this range. The result would be clamped to be 32767.

To avoid the level of lost information due to clamping most integer primitives allow for result scaling. Primitives with result scaling have the “Sfs” suffix in their name and provide a parameter “nScaleFactor” that controls the amount of scaling. Before the results of an operation are clamped to the valid output-data range by multiplying them with  $2^{-nScaleFactor}$ .

Example: The primitive *nppsSqr\_8u\_Sfs()* computes the square of 8-bit unsigned sample values in a signal (1D array of values). The maximum value of a 8-bit value is 255. The square of  $255^2 = 65025$  which would be clamped to 255 if no result scaling is performed. In order to map the maximum value of 255 to 255 in the result, one would specify an integer result scaling factor of 8, i.e. multiply each result with  $2^{-8} = \frac{1}{2^8} = \frac{1}{256}$ . The final result for a signal value of 255 being squared and scaled would be:

$$255^2 \cdot 2^{-8} = 254.00390625$$

which would be rounded to a final result of 254.

A medium gray value of 128 would result in

$$128^2 * 2^{-8} = 64$$

## 1.2.4. Rounding Modes

Many NPP functions require converting floating-point values to integers. The *Rounding Modes* enum lists NPP's supported rounding modes. Not all primitives in NPP that perform rounding as part of their functionality allow the user to specify the round-mode used. Instead they use NPP's default rounding mode, which is `NPP_RND_FINANCIAL`.

### 1.2.4.1 Rounding Mode Parameter

A subset of NPP functions performing rounding as part of their functionality do allow the user to specify which rounding mode is used through a parameter of the *Rounding Modes* type.

## 1.3. Image Processing Conventions

### 1.3.1. Function Naming

Image processing related functions use a number of suffixes to indicate various different flavors of a primitive beyond just different data types. The flavor suffix uses the following abbreviations:

- ▶ "A" if the image is a 4 channel image this indicates the result alpha channel is not affected by the primitive.
- ▶ "Cn" the image consists of n channel packed pixels, where n can be 1, 2, 3 or 4.
- ▶ "Pn" the image consists of n separate image planes, where n can be 1, 2, 3 or 4.
- ▶ "C" (following the channel information) indicates that the primitive only operates on one of the color channels, the "channel-of-interest". All other output channels are not affected by the primitive.
- ▶ "I" indicates that the primitive works "in-place". In this case the image-data pointer is usually named `pSrcDst` to indicate that the image data serves as source and destination at the same time.
- ▶ "M" indicates "masked operation". These types of primitives have an additional "mask image" as input. Each pixel in the destination image corresponds to a pixel in the mask image. Only pixels with a corresponding non-zero mask pixel are being processed.
- ▶ "R" indicates the primitive operates only on a rectangular region\_of\_interest or "ROI". All ROI primitives take an additional input parameter of type `NppiSize`, which specifies the width and height of the rectangular region that the primitive should process. For details on how primitives operate on ROIs see: [:ref: 'roi\\_specification'](#).
- ▶ "Sfs" indicates the result values are processed by fixed scaling and saturation before they're written out.

The suffixes above always appear in alphabetical order. E.g. a 4 channel primitive not affecting the alpha channel with masked operation, in place and with scaling/saturation and ROI would have the postfix: “AC4IMRSfs”.

## 1.3.2. Image Data

Image data is passed to and from NPPI primitives via a pair of parameters:

1. A pointer to the image’s underlying data type.
2. A line step in bytes (also sometimes called line stride).

The general idea behind this fairly low-level way of passing image data is ease-of-adoption into existing software projects:

- ▶ Passing a raw pointer to the underlying pixel data type, rather than structured (by color) channel pixel data allows usage of the function in a wide variety of situations avoiding risky type cast or expensive image data copies.
- ▶ Passing the data pointer and line step individually rather than a higher-level image struct again allows for easy adoption by not requiring a specific image representation and thus avoiding awkward packing and unpacking of image data from the host application to an NPP specific image representation.

### 1.3.2.1 Line Step

The line step (also called “line stride” or “row step”) allows lines of oddly sized images to start on well-aligned addresses by adding a number of unused bytes at the ends of the lines. This type of line padding has been common practice in digital image processing for a long time and is not particular to GPU image processing.

The line step is the number of bytes in a line **including the padding**. An other way to interpret this number is to say that it is the number of bytes between the first pixels of successive rows in the image, or generally the number of bytes between two neighboring pixels in any column of pixels.

The general reason for the existence of the line step it is that uniformly aligned rows of pixel enable optimizations of memory-access patterns.

Even though all functions in NPP will work with arbitrarily aligned images, best performance can only be achieved with well aligned image data. Any image data allocated with the NPP image allocators or the 2D memory allocators in the CUDA runtime, is well aligned.

Particularly on older CUDA capable GPUs it is likely that the performance decrease for misaligned data is substantial (orders of magnitude).

All image data passed to NPPI primitives requires a line step to be provided. It is important to keep in mind that this line step is always specified in terms of bytes, not pixels.

### 1.3.2.2 Parameter Names for Image Data

There are three general cases of image-data passing throughout NPP detailed in the following sections.

#### 1.3.2.2.1 Passing Source-Image Data

Those are images consumed by the algorithm.

##### 1.3.2.2.2 Source-Image Pointer

The source image data is generally passed via a pointer named

```
pSrc
```

The source image pointer is generally defined constant, enforcing that the primitive does not change any image data pointed to by that pointer. E.g.

```
nppiPrimitive_32s_C1R(const Npp32s * pSrc, ...)
```

In case the primitive consumes multiple images as inputs the source pointers are numbered like this:

```
pSrc1, pSrc2, ...
```

##### 1.3.2.2.3 Source-Batch-Images Pointer

The batch of source images data is generally passed via a pointer of `NppiImageDescriptor` type named

```
pSrcBatchList
```

The source batch pointer is generally defined constant, enforcing that the primitive does not change any source data pointed to by that pointer. E.g.

```
nppiYUVToRGBBatch_8u_C3R(NppiSize oSizeROI, const NppiImageDescriptor* pSrcBatchList,  
↪...)
```

All primitives processing batch data require providing the size of the batch in a separate parameter.

##### 1.3.2.2.4 Source-Planar-Image Pointer Array

The planar source image data is generally passed via an array of pointers named

```
pSrc[]
```

The planar source image pointer array is generally defined a constant array of constant pointers, enforcing that the primitive does not change any image data pointed to by those pointers. E.g.

```
nppiPrimitive_8u_P3R(const Npp8u * const pSrc[3], ...)
```

Each pointer in the array points to a different image plane.

### 1.3.2.2.5 Source-Planar-Image Pointer

The multiple plane source image data is passed via a set of pointers named

```
pSrc1, pSrc2, ...
```

The planar source image pointer is generally defined as one of a set of constant pointers with each pointer pointing to a different input image plane.

### 1.3.2.2.6 Source-Image Line Step

The source image line step is the number of bytes between successive rows in the image. The source image line step parameter is

```
nSrcStep
```

or in the case of multiple source images

```
nSrcStep1, nSrcStep2, ...
```

### 1.3.2.2.7 Source-Planar-Image Line Step Array

The source planar image line step array is an array where each element of the array contains the number of bytes between successive rows for a particular plane in the input image. The source planar image line step array parameter is

```
rSrcStep[ ]
```

### 1.3.2.2.8 Source-Planar-Image Line Step

The source planar image line step is the number of bytes between successive rows in a particular plane of the multiplane input image. The source planar image line step parameter is

```
nSrcStep1, nSrcStep2, ...
```

### 1.3.2.2.9 Passing Destination-Image Data

Those are images produced by the algorithm.

#### 1.3.2.2.10 Destination-Image Pointer

The destination image data is generally passed via a pointer named

```
pDst
```

In case the primitive generates multiple images as outputs the destination pointers are numbered like this:

```
pDst1, pDst2, ...
```

#### 1.3.2.2.11 Destination-Batch-Images Pointer

The batch of destination images data is generally passed via a pointer of `NppImageDescriptor` type named

```
pDstBatchList
```

All primitives processing batch data require providing the size of the batch in a separate parameter.

#### 1.3.2.2.12 Destination-Planar-Image Pointer Array

The planar destination image data pointers are generally passed via an array of pointers named

```
pDst[ ]
```

Each pointer in the array points to a different image plane.

#### 1.3.2.2.13 Destination-Planar-Image Pointer

The destination planar image data is generally passed via a pointer to each plane of a multiplane output image named

```
pDst1, pDst2, ...
```

#### 1.3.2.2.14 Destination-Image Line Step

The destination image line step parameter is

```
nDstStep
```

or in the case of multiple destination images

```
nDstStep1, nDstStep2, ...
```

#### 1.3.2.2.15 Destination-Planar-Image Line Step

The destination planar image line step is the number of bytes between successive rows for a particular plane in a multiplane output image. The destination planar image line step parameter is

```
nDstStep1, nDstStep2, ...
```

#### 1.3.2.2.16 Passing In-Place Image Data

#### 1.3.2.2.17 In-Place Image Pointer

In the case of in-place processing, source and destination are served by the same pointer and thus pointers to in-place image data are called:

```
pSrcDst
```

#### 1.3.2.2.18 In-Place-Image Line Step

The in-place line step parameter is

```
nSrcDstStep
```

#### 1.3.2.2.19 Passing Mask-Image Data

Some image processing primitives have variants supporting `masked_operation`.

#### 1.3.2.2.20 Mask-Image Pointer

The mask-image data is generally passed via a pointer named

```
pMask
```

#### 1.3.2.2.21 Mask-Image Line Step

The mask-image line step parameter is

```
nMaskStep
```

### 1.3.2.2.22 Passing Channel-of-Interest Data

Some image processing primitives support `channel_of_interest`.

### 1.3.2.2.23 Channel\_of\_Interest Number

The channel-of-interest data is generally an integer (either 1, 2, or 3):

```
nCOI
```

### 1.3.2.3 Image Data Alignment Requirements

NPP requires pixel data to adhere to certain alignment constraints.

For 2 and 4 channel images the following alignment requirement holds:

```
data_pointer % (\#channels * sizeof(channel type)) == 0
```

E.g. a 4 channel image with underlying type *Npp8u* (8-bit unsigned) would require all pixels to fall on addresses that are multiples of 4 (4 channels \* 1 byte size).

As a logical consequence of all pixels being aligned to their natural size the image line steps of 2 and 4 channel images also need to be multiples of the pixel size.

For 1 and 3 channel images only require that pixel pointers are aligned to the underlying data type, i.e. `pData % sizeof(data type) == 0`. And consequentially line steps are also held to this requirement.

### 1.3.2.4 Image Data Related Error Codes

All NPPI primitives operating on image data validate the image-data pointer for proper alignment and test that the point is not null. They also validate the line stride for proper alignment and guard against the step being less or equal to 0. Failed validation results in one of the following error codes being returned and the primitive not being executed: `NPP_STEP_ERROR` is returned if the data step is 0 or negative. `NPP_NOT_EVEN_STEP_ERROR` is returned if the line step is not a multiple of the pixel size for 2 and 4 channel images. `NPP_NULL_POINTER_ERROR` is returned if the image-data pointer is 0 (NULL). `NPP_ALIGNMENT_ERROR` if the image-data pointer address is not a multiple of the pixel size for 2 and 4 channel images.

## 1.3.3. Region-Of-Interest (ROI)

In practice processing a rectangular sub-region of an image is often more common than processing complete images. The vast majority of NPP's image-processing primitives allow for processing of such sub regions also referred to as regions-of-interest or ROIs.

All primitives supporting ROI processing are marked by a "R" in their name suffix. In most cases the ROI is passed as a single `NppiSize` struct, which provides the width and height of the ROI. This raises the question how the primitive knows where in the image this rectangle of (width, height) is located. The "start pixel" of the ROI is implicitly given by the image-data pointer. I.e. instead of explicitly passing a pixel coordinate for the upper-left corner (lowest memory address), the user simply offsets the image-data pointers to point to the first pixel of the ROI.

In practice this means that for an image (`pSrc`, `nSrcStep`) and the start-pixel of the ROI being at location (`x`, `y`), one would pass

```
pSrcOffset = pSrc + y * nSrcStep + x * PixelSize;
```

as the image-data source to the primitive. `PixelSize` is typically computed as

```
PixelSize = NumberOfColorChannels * sizeof(PixelDataType).
```

E.g. for a primitive like `nppiSet_16s_C4R()` we would have

- ▶ `NumberOfColorChannels == 4;`
- ▶ `sizeof(Npp16s) == 2;`
- ▶ and thus `PixelSize = 4 * 2 = 8;`

### 1.3.3.1 ROI Related Error Codes

All NPPI primitives operating on ROIs of image data validate the ROI size and image's step size. Failed validation results in one of the following error codes being returned and the primitive not being executed: `NPP_SIZE_ERROR` is returned if either the ROI width or ROI height are negative. `NPP_STEP_ERROR` is returned if the ROI width exceeds the image's line step. In mathematical terms  $(\text{widthROI} * \text{PixelSize}) > \text{nLinStep}$  indicates an error.

## 1.3.4. Masked Operation

Some primitive support masked operation. An "M" in the suffix of those variants indicates masked operation. Primitives supporting masked operation consume an additional input image provided via a `mask_image_pointer` and `mask_image_line_step`. The mask image is interpreted by these primitives as a boolean image. The values of type `Npp8u` are interpreted as boolean values where a values of 0 indicates false, any non-zero values true.

Unless otherwise indicated the operation is only performed on pixels where its spatially corresponding mask pixel is true (non-zero). E.g. a masked copy operation would only copy those pixels in the ROI that have corresponding non-zero mask pixels.

## 1.3.5. Channel-of-Interest API

Some primitives allow restricting operations to a single channel of interest within a multi-channel image. These primitives are suffixed with the letter "C" (after the channel information, e.g. `nppi-Copy_8u_C3CR()`). The channel-of-interest is generally selected by offsetting the image-data pointer to point directly to the channel- of-interest rather than the base of the first pixel in the ROI. Some primitives also explicitly specify the selected channel number and pass it via an integer, e.g. `nppiMean_StdDev_8u_C3CR()`.

### 1.3.5.1 Select-Channel Source-Image Pointer

This is a pointer to the channel-of-interest within the first pixel of the source image. E.g. if `pSrc` is the pointer to the first pixel inside the ROI of a three channel image. Using the appropriate select-channel copy primitive one could copy the second channel of this source image into the first channel of a destination image given by `pDst` by offsetting the pointer by one:

```
nppiCopy_8u_C3CR(pSrc + 1, nSrcStep, pDst, nDstStep, oSizeROI);
```

### 1.3.5.2 Select-Channel Source-Image

Some primitives allow the user to select the channel-of-interest by specifying the channel number (`nCOI`). This approach is typically used in the image statistical functions. For example,

```
nppiMean_StdDev_8u_C3CR(pSrc, nSrcStep, oSizeROI, nCOI, pDeviceBuffer, pMean, pStdDev  
↪);
```

The channel-of-interest number can be either 1, 2, or 3.

### 1.3.5.3 Select-Channel Destination-Image Pointer

This is a pointer to the channel-of-interest within the first pixel of the destination image. E.g. if `pDst` is the pointer to the first pixel inside the ROI of a three channel image. Using the appropriate select-channel copy primitive one could copy data into the second channel of this destination image from the first channel of a source image given by `pSrc` by offsetting the destination pointer by one:

```
nppiCopy_8u_C3CR(pSrc, nSrcStep, pDst + 1, nDstStep, oSizeROI);
```

## 1.3.6. Source-Image Sampling

A large number of NPP image-processing functions consume at least one source image and produce an output image (e.g. `nppiAddC_8u_C1RSfs()` or `nppiFilterBox_8u_C1R()`). All NPP functions falling into this category also operate on ROIs (see :ref: `_roi_specification`) which for these functions should be considered to describe the destination ROI. In other words the ROI describes a rectangular region in the destination image and all pixels inside of this region are being written by the function in question.

In order to use such functions successfully it is important to understand how the user defined destination ROI affects which pixels in the input image(s) are being read by the algorithms. To simplify the discussion of ROI propagation (i.e. given a destination ROI, what are the ROIs in the source(s)), it makes sense to distinguish two major cases:

1. Point-Wise Operations: These are primitives like `nppiAddC_8u_C1RSfs()`. Each output pixel requires exactly one input pixel to be read.
2. Neighborhood Operations: These are primitives like `nppiFilterBox_8u_C1R()`, which require a group of pixels from the source image(s) to be read in order to produce a single output.

### 1.3.6.1 Point-Wise Operations

As mentioned above, point-wise operations consume a single pixel from the input image (or a single pixel from each input image, if the operation in question has more than one input image) in order to produce a single output pixel.

### 1.3.6.2 Neighborhood Operations

In the case of neighborhood operations a number of input pixels (a “neighborhood” of pixels) is read in the input image (or images) in order to compute a single output pixel. All of the functions for `image_filtering_functions` and `image_morphological_operations` are neighborhood operations.

Most of these functions have parameters that affect the size and relative location of the neighborhood: a mask-size structure and an anchor-point structure. Both parameters are described in more detail in the next subsections.

#### 1.3.6.2.1 Mask-Size Parameter

Many NPP neighborhood operations allow the user to specify the size of the neighborhood via a parameter usually named `oMaskSize` of type `NppiSize`. In those cases the neighborhood of pixels read from the source(s) is exactly the size of the mask. Assuming the mask is anchored at location (0, 0) (see `anchor_point_parameter` below) and has a size of (w, h), i.e.

```
assert(oMaskSize.w == w);
assert(oMaskSize.h == h);
assert(oAnchor.x == 0);
assert(oAnchor.y == 0);
```

a neighborhood operation would read the following source pixels in order to compute destination pixel  $D_{i,j}$ :

$$\begin{array}{cccc}
 S_{i,j} & S_{i,j+1} & \cdots & S_{i,j+w-1} \\
 S_{i+1,j} & S_{i+1,j+1} & \cdots & S_{i+1,j+w-1} \\
 \vdots & \vdots & \ddots & \vdots \\
 S_{i+h-1,j} & S_{i+h-1,j+1} & \cdots & S_{i+h-1,j+w-1}
 \end{array}$$

#### 1.3.6.2.2 Anchor-Point Parameter

Many NPP primitives performing neighborhood operations allow the user to specify the relative location of the neighborhood via a parameter usually named `oAnchor` of type `NppiPoint`. Using the anchor a developer can choose the position of the mask (see `mask_size_parameter`) relative to current pixel index.

Using the same example as in `mask_size_parameter`, but this time with an anchor position of (a, b):

```
assert(oMaskSize.w == w);
assert(oMaskSize.h == h);
assert(oAnchor.x == a);
assert(oAnchor.y == b);
```

the following pixels from the source image would be read:

$$\begin{array}{cccc} S_{i-a,j-b} & S_{i-a,j-b+1} & \cdots & S_{i-a,j-b+w-1} \\ S_{i-a+1,j-b} & S_{i-a+1,j-b+1} & \cdots & S_{i-a+1,j-b+w-1} \\ \vdots & \vdots & \ddots & \vdots \\ S_{i-a+h-1,j-b} & S_{i-a+h-1,j-b+1} & \cdots & S_{i-a+h-1,j-b+w-1} \end{array}$$

### 1.3.6.2.3 Sampling Beyond Image Boundaries

NPP primitives in general and NPP neighborhood operations in particular require that all pixel locations read and written are valid and within the boundaries of the respective images. Sampling outside of the defined image data regions results in undefined behavior and may lead to system instability.

This poses a problem in practice: when processing full-size images one cannot choose the destination ROI to be the same size as the source image. Because neighborhood operations read pixels from an enlarged source ROI, the destination ROI must be shrunk so that the expanded source ROI does not exceed the source image's size OR if the neighborhood operation function supports a Border version then this version can be used without ROI adjustment with the appropriate border protection mode selected.

For cases where this “shrinking” of the destination image size is unacceptable and a Border version of the function is not available, NPP provides a set of border-expanding Copy primitives. E.g. *nppiCopyConstBorder\_8u\_C1R()*, *nppiCopyReplicateBorder\_8u\_C1R()* and *nppiCopyWrapBorder\_8u\_C1R()*. The user can use these primitives to “expand” the source image's size using one of the three expansion modes. The expanded image can then be safely passed to a neighborhood operation producing a full-size result.

## 1.4. Signal Processing Conventions

### 1.4.1. Signal Data

Signal data is passed to and from NPPS primitives via a pointer to the signal's data type.

The general idea behind this fairly low-level way of passing signal data is ease-of-adoption into existing software projects:

- ▶ Passing the data pointer rather than a higher-level signal struct allows for easy adoption by not requiring a specific signal representation (that could include total signal size offset, or other additional information). This avoids awkward packing and unpacking of signal data from the host application to an NPP specific signal representation.

### 1.4.1.1 Parameter Names for Signal Data

There are three general cases of image-data passing throughout NPP detailed in the following sections.

Those are signals consumed by the algorithm.

#### 1.4.1.1.1 Source Signal Pointer

The source signal data is generally passed via a pointer named

```
pSrc
```

The source signal pointer is generally defined constant, enforcing that the primitive does not change any image data pointed to by that pointer. E.g.

```
nppsPrimitive_32s(const Npp32s * pSrc, ...)
```

In case the primitive consumes multiple signals as inputs the source pointers are numbered like this:

```
pSrc1, pSrc2, ...
```

#### 1.4.1.1.2 Destination Signal Pointer

The destination signal data is generally passed via a pointer named

```
pDst
```

In case the primitive consumes multiple signals as inputs the source pointers are numbered like this:

```
pDst1, pDst2, ...
```

#### 1.4.1.1.3 In-Place Signal Pointer

In the case of in-place processing, source and destination are served by the same pointer and thus pointers to in-place signal data are called:

```
pSrcDst
```

### 1.4.1.2 Signal Data Alignment Requirements

NPP requires signal sample data to be naturally aligned, i.e. any pointer

```
NppType * p;
```

to a sample in a signal needs to fulfill:

```
assert(p % sizeof(p) == 0);
```

### 1.4.1.3 Signal Data Related Error Codes

All NPPI primitives operating on signal data validate the signal-data pointer for proper alignment and test that the point is not null.

Failed validation results in one of the following error codes being returned and the primitive not being executed: `NPP_NULL_POINTER_ERROR` is returned if the image-data pointer is 0 (NULL). `NPP_ALIGNMENT_ERROR` if the signal-data pointer address is not a multiple of the signal's data-type size.

## 1.4.2. Signal Length

The vast majority of NPPS functions take a

`nLength`

parameter that tells the primitive how many of the signal's samples starting from the given data pointer are to be processed.

### 1.4.2.1 Length Related Error Codes

All NPPS primitives taking a length parameter validate this input.

Failed validation results in the following error code being returned and the primitive not being executed: `NPP_SIZE_ERROR` is returned if the length is negative.

## 1.5. Data Types, Structs, Enums, and Constants

struct **Npp16f**

Workarounds for `cuda_fp16.h` C incompatibility `Npp16f`.

### Public Members

short **fp16**

Original Cuda fp16 data size and format.

struct **Npp16f\_2**

`Npp16f_2`.

## Public Members

short **fp16\_0**

Original Cuda fp16 data size and format.

short **fp16\_1**

Original Cuda fp16 data size and format.

enum **NppiInterpolationMode**

Filtering methods.

*Values:*

enumerator **NPPI\_INTER\_UNDEFINED**

Undefined filtering interpolation mode.

enumerator **NPPI\_INTER\_NN**

Nearest neighbor filtering.

enumerator **NPPI\_INTER\_LINEAR**

Linear interpolation.

enumerator **NPPI\_INTER\_CUBIC**

Cubic interpolation.

enumerator **NPPI\_INTER\_CUBIC2P\_BSPLINE**

Two-parameter cubic filter (B=1, C=0)

enumerator **NPPI\_INTER\_CUBIC2P\_CATMULLROM**

Two-parameter cubic filter (B=0, C=1/2)

enumerator **NPPI\_INTER\_CUBIC2P\_B05C03**

Two-parameter cubic filter (B=1/2, C=3/10)

enumerator **NPPI\_INTER\_SUPER**

Super sampling.

enumerator **NPPI\_INTER\_LANCZOS**

Lanczos filtering.

enumerator **NPPI\_INTER\_LANCZOS3\_ADVANCED**

Generic Lanczos filtering with order 3.

enumerator **NPPI\_SMOOTH\_EDGE**

Smooth edge filtering.

enum **NppiBayerGridPosition**

Bayer Grid Position Registration.

*Values:*

enumerator **NPPI\_BAYER\_BGGR**

Default registration position BGGR.

enumerator **NPPI\_BAYER\_RGGB**

Registration position RGGB.

enumerator **NPPI\_BAYER\_GBRG**

Registration position GBRG.

enumerator **NPPI\_BAYER\_GRBG**

Registration position GRBG.

enum **NppiMaskSize**

Fixed filter-kernel sizes.

*Values:*

enumerator **NPP\_MASK\_SIZE\_1\_X\_3**

1 X 3 filter mask size.

enumerator **NPP\_MASK\_SIZE\_1\_X\_5**

1 X 5 filter mask size.

enumerator **NPP\_MASK\_SIZE\_3\_X\_1**

3 X 1 filter mask size, leaving space for more 1 X N type enum values.

enumerator **NPP\_MASK\_SIZE\_5\_X\_1**

5 X 1 filter mask size.

enumerator **NPP\_MASK\_SIZE\_3\_X\_3**

3 X 3 filter mask size, leaving space for more N X 1 type enum values.

enumerator **NPP\_MASK\_SIZE\_5\_X\_5**

5 X 5 filter mask size.

enumerator **NPP\_MASK\_SIZE\_7\_X\_7**

7 X 7 filter mask size.

enumerator **NPP\_MASK\_SIZE\_9\_X\_9**

9 X 9 filter mask size.

enumerator **NPP\_MASK\_SIZE\_11\_X\_11**

11 X 11 filter mask size.

enumerator **NPP\_MASK\_SIZE\_13\_X\_13**

13 X 13 filter mask size.

enumerator **NPP\_MASK\_SIZE\_15\_X\_15**

15 X 15 filter mask size.

enum **NppiDifferentialKernel**

Differential Filter types.

*Values:*

enumerator **NPP\_FILTER\_SOBEL**

Differential kernel filter type sobel.

enumerator **NPP\_FILTER\_SCHARR**

Differential kernel filter type scharr.

enum **NppStatus**

Error Status Codes.

Almost all NPP function return error-status information using these return codes. Negative return codes indicate errors, positive return codes indicate warnings, a return code of 0 indicates success.

*Values:*

enumerator **NPP\_NOT\_SUPPORTED\_MODE\_ERROR**

Not supported mode error.

enumerator **NPP\_INVALID\_HOST\_POINTER\_ERROR**

Invalid host memory pointer error.

enumerator **NPP\_INVALID\_DEVICE\_POINTER\_ERROR**

Invalid device memory pointer error.

enumerator **NPP\_LUT\_PALETTE\_BITSIZE\_ERROR**

Color look up table bitsize error.

enumerator **NPP\_ZC\_MODE\_NOT\_SUPPORTED\_ERROR**

ZeroCrossing mode not supported error.

enumerator **NPP\_NOT\_SUFFICIENT\_COMPUTE\_CAPABILITY**

Not sufficient Cuda compute capability error.

enumerator **NPP\_TEXTURE\_BIND\_ERROR**

Texture bind error.

enumerator **NPP\_WRONG\_INTERSECTION\_ROI\_ERROR**

Wrong intersection region of interest error.

enumerator **NPP\_HAAR\_CLASSIFIER\_PIXEL\_MATCH\_ERROR**

Haar classifier pixel match error.

enumerator **NPP\_MEMFREE\_ERROR**

Memory free request error.

enumerator **NPP\_MEMSET\_ERROR**

Memory set request error.

enumerator **NPP\_MEMCPY\_ERROR**

Memory copy request error.

enumerator **NPP\_ALIGNMENT\_ERROR**

Memory alignment error.

enumerator **NPP\_CUDA\_KERNEL\_EXECUTION\_ERROR**

Cuda kernel execution error, most commonly Cuda kernel launch error.

enumerator **NPP\_ROUND\_MODE\_NOT\_SUPPORTED\_ERROR**

Unsupported round mode.

enumerator **NPP\_QUALITY\_INDEX\_ERROR**

Image pixels are constant for quality index.

enumerator **NPP\_RESIZE\_NO\_OPERATION\_ERROR**

One of the output image dimensions is less than 1 pixel.

enumerator **NPP\_OVERFLOW\_ERROR**

Number overflows the upper or lower limit of the data type.

enumerator **NPP\_NOT\_EVEN\_STEP\_ERROR**

Step value is not pixel multiple.

enumerator **NPP\_HISTOGRAM\_NUMBER\_OF\_LEVELS\_ERROR**

Number of levels for histogram is less than 2.

enumerator **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR**

Number of levels for LUT is less than 2.

enumerator **NPP\_CORRUPTED\_DATA\_ERROR**

Processed data is corrupted,.

enumerator **NPP\_CHANNEL\_ORDER\_ERROR**

Wrong order of the destination channels,.

enumerator **NPP\_ZERO\_MASK\_VALUE\_ERROR**

All values of the mask are zero,.

enumerator **NPP\_QUADRANGLE\_ERROR**

The quadrangle is nonconvex or degenerates into triangle, line or point.

enumerator **NPP\_RECTANGLE\_ERROR**

Size of the rectangle region is less than or equal to 1.

enumerator **NPP\_COEFFICIENT\_ERROR**

Unallowable values of the transformation coefficients.

enumerator **NPP\_NUMBER\_OF\_CHANNELS\_ERROR**

Bad or unsupported number of channels.

enumerator **NPP\_COI\_ERROR**

Channel of interest is not 1, 2, or 3.

enumerator **NPP\_DIVISOR\_ERROR**

Divisor is equal to zero.

enumerator **NPP\_CHANNEL\_ERROR**

Illegal channel index.

enumerator **NPP\_STRIDE\_ERROR**

Stride is less than the row length.

enumerator **NPP\_ANCHOR\_ERROR**

Anchor point is outside mask.

enumerator **NPP\_MASK\_SIZE\_ERROR**

Lower bound is larger than upper bound.

enumerator **NPP\_RESIZE\_FACTOR\_ERROR**

enumerator **NPP\_INTERPOLATION\_ERROR**

enumerator **NPP\_MIRROR\_FLIP\_ERROR**

enumerator **NPP\_MOMENT\_00\_ZERO\_ERROR**

enumerator **NPP\_THRESHOLD\_NEGATIVE\_LEVEL\_ERROR**

enumerator **NPP\_THRESHOLD\_ERROR**

enumerator **NPP\_CONTEXT\_MATCH\_ERROR**

enumerator **NPP\_FFT\_FLAG\_ERROR**

enumerator **NPP\_FFT\_ORDER\_ERROR**

enumerator **NPP\_STEP\_ERROR**

Step is less or equal zero.

enumerator **NPP\_SCALE\_RANGE\_ERROR**

enumerator **NPP\_DATA\_TYPE\_ERROR**

enumerator **NPP\_OUT\_OFF\_RANGE\_ERROR**

enumerator **NPP\_DIVIDE\_BY\_ZERO\_ERROR**

enumerator **NPP\_MEMORY\_ALLOCATION\_ERR**

enumerator **NPP\_NULL\_POINTER\_ERROR**

enumerator **NPP\_RANGE\_ERROR**

enumerator **NPP\_SIZE\_ERROR**

enumerator **NPP\_BAD\_ARGUMENT\_ERROR**

enumerator **NPP\_NO\_MEMORY\_ERROR**

enumerator **NPP\_NOT\_IMPLEMENTED\_ERROR**

enumerator **NPP\_ERROR**

enumerator **NPP\_ERROR\_RESERVED**

enumerator **NPP\_NO\_ERROR**

Error free operation.

enumerator **NPP\_SUCCESS**

Successful operation (same as NPP\_NO\_ERROR)

enumerator **NPP\_NO\_OPERATION\_WARNING**

Indicates that no operation was performed.

enumerator **NPP\_DIVIDE\_BY\_ZERO\_WARNING**

Divisor is zero however does not terminate the execution.

enumerator **NPP\_AFFINE\_QUAD\_INCORRECT\_WARNING**

Indicates that the quadrangle passed to one of affine warping functions doesn't have necessary properties.

First 3 vertices are used, the fourth vertex discarded.

enumerator **NPP\_WRONG\_INTERSECTION\_ROI\_WARNING**

The given ROI has no intersection with either the source or destination ROI.

Thus no operation was performed.

enumerator **NPP\_WRONG\_INTERSECTION\_QUAD\_WARNING**

The given quadrangle has no intersection with either the source or destination ROI.

Thus no operation was performed.

enumerator **NPP\_DOUBLE\_SIZE\_WARNING**

Image size isn't multiple of two.

Indicates that in case of 422/411/420 sampling the ROI width/height was modified for proper processing.

enumerator **NPP\_MISALIGNED\_DST\_ROI\_WARNING**

Speed reduction due to uncoalesced memory accesses warning.

struct **NppLibraryVersion**

NPPLibraryVersion This struct contains the NPP Library Version information.

### Public Members

int **major**

Major version number.

int **minor**

Minor version number.

---

**enum NppDataType**

Data types for nppiPlus functions.

*Values:*

enumerator **NPP\_8U**

8-bit unsigned integer data type

enumerator **NPP\_8S**

8-bit signed integer data type

enumerator **NPP\_16U**

16-bit unsigned integer data type

enumerator **NPP\_16S**

16-bit signed integer data type

enumerator **NPP\_32U**

32-bit unsigned integer data type

enumerator **NPP\_32S**

32-bit signed integer data type

enumerator **NPP\_64U**

64-bit unsigned integer data type

enumerator **NPP\_64S**

64-bit signed integer data type

enumerator **NPP\_16F**

16-bit original Cuda floating point data type

enumerator **NPP\_32F**

32-bit floating point data type

enumerator **NPP\_64F**

64-bit double precision floating point data type

**enum NppiChannels**

Image channel counts for nppiPlus functions.

*Values:*

enumerator **NPP\_CH\_1**

Single channel per pixel data.

enumerator **NPP\_CH\_2**

Two channel per pixel data.

enumerator **NPP\_CH\_3**

Three channel per pixel data.

enumerator **NPP\_CH\_4**

Four channel per pixel data.

enumerator **NPP\_CH\_A4**

Four channel per pixel data with alpha.

enumerator **NPP\_CH\_P2**

Two channel single channel per plane pixel data.

enumerator **NPP\_CH\_P3**

Three channel single channel per plane pixel data.

enumerator **NPP\_CH\_P4**

Four channel single channel per plane pixel data.

**NPP\_MIN\_8U**

Minimum 8-bit unsigned integer.

**NPP\_MAX\_8U**

Maximum 8-bit unsigned integer.

**NPP\_MIN\_16U**

Minimum 16-bit unsigned integer.

**NPP\_MAX\_16U**

Maximum 16-bit unsigned integer.

**NPP\_MIN\_32U**

Minimum 32-bit unsigned integer.

**NPP\_MAX\_32U**

Maximum 32-bit unsigned integer.

**NPP\_MIN\_64U**

Minimum 64-bit unsigned integer.

**NPP\_MAX\_64U**

Maximum 64-bit unsigned integer.

**NPP\_MIN\_8S**

Minimum 8-bit signed integer.

**NPP\_MAX\_8S**

Maximum 8-bit signed integer.

**NPP\_MIN\_16S**

Minimum 16-bit signed integer.

**NPP\_MAX\_16S**

Maximum 16-bit signed integer.

**NPP\_MIN\_32S**

Minimum 32-bit signed integer.

**NPP\_MAX\_32S**

Maximum 32-bit signed integer.

**NPP\_MIN\_64S**

Minimum 64-bit signed integer.

**NPP\_MAX\_64S**

Minimum 64-bit signed integer.

**NPP\_MINABS\_32F**

Smallest positive 32-bit floating point value.

**NPP\_MAXABS\_32F**

Largest positive 32-bit floating point value.

**NPP\_MINABS\_64F**

Smallest positive 64-bit floating point value.

**NPP\_MAXABS\_64F**

Largest positive 64-bit floating point value.

struct **NppiPoint**

2D Point

### Public Members

int **x**  
x-coordinate.

int **y**  
y-coordinate.

struct **NppiPoint32f**  
2D Npp32f Point

### Public Members

*Npp32f* **x**  
x-coordinate.

*Npp32f* **y**  
y-coordinate.

struct **NppiPoint64f**  
2D Npp64f Point

### Public Members

*Npp64f* **x**  
x-coordinate.

*Npp64f* **y**  
y-coordinate.

struct **NppPointPolar**  
2D Polar Point

### Public Members

*Npp32f* **rho**  
Polar rho value.

*Npp32f* **theta**  
Polar theta value.

struct **NppiSize**  
2D Size This struct typically represents the size of a rectangular region in two space.

**Public Members**int **width**

Rectangle width.

int **height**

Rectangle height.

struct **NppiRect**

2D Rectangle This struct contains position and size information of a rectangle in two space.

The rectangle's position is usually signified by the coordinate of its upper-left corner.

**Public Members**int **x**

x-coordinate of upper left corner (lowest memory address).

int **y**

y-coordinate of upper left corner (lowest memory address).

int **width**

Rectangle width.

int **height**

Rectangle height.

enum **NppiAxis**

nppiMirror direction controls

*Values:*enumerator **NPP\_HORIZONTAL\_AXIS**

Flip around horizontal axis in mirror function.

enumerator **NPP\_VERTICAL\_AXIS**

Flip around vertical axis in mirror function.

enumerator **NPP\_BOTH\_AXIS**

Flip around both axes in mirror function.

enum **NppCmpOp**

Pixel comparison control values.

*Values:*

enumerator **NPP\_CMP\_LESS**

Threshold test for less than.

enumerator **NPP\_CMP\_LESS\_EQ**

Threshold test for less than or equal.

enumerator **NPP\_CMP\_EQ**

Threshold test for equal.

enumerator **NPP\_CMP\_GREATER\_EQ**

Threshold test for greater than or equal.

enumerator **NPP\_CMP\_GREATER**

Threshold test for greater than.

enum **NppRoundMode**

Rounding Modes.

The enumerated rounding modes are used by a large number of NPP primitives to allow the user to specify the method by which fractional values are converted to integer values. Also see *Rounding Modes*.

For NPP release 5.5 new names for the three rounding modes are introduced that are based on the naming conventions for rounding modes set forth in the IEEE-754 floating-point standard. Developers are encouraged to use the new, longer names to be future proof as the legacy names will be deprecated in subsequent NPP releases.

*Values:*

enumerator **NPP\_RND\_NEAR**

Round to the nearest even integer.

All fractional numbers are rounded to their nearest integer. The ambiguous cases (i.e.  $\langle \text{integer} \rangle .5$ ) are rounded to the closest even integer. E.g.

- ▶ `roundNear(0.5) = 0`
- ▶ `roundNear(0.6) = 1`
- ▶ `roundNear(1.5) = 2`
- ▶ `roundNear(-1.5) = -2`

enumerator **NPP\_ROUND\_NEAREST\_TIES\_TO\_EVEN**

Alias name for `NPP_RND_NEAR`.

enumerator **NPP\_RND\_FINANCIAL**

Round according to financial rule.

All fractional numbers are rounded to their nearest integer. The ambiguous cases (i.e.  $\langle \text{integer} \rangle .5$ ) are rounded away from zero. E.g.

- ▶ `roundFinancial(0.4) = 0`

- ▶ `roundFinancial(0.5) = 1`
- ▶ `roundFinancial(-1.5) = -2`

enumerator **NPP\_ROUND\_NEAREST\_TIES\_AWAY\_FROM\_ZERO**

Alias name for `NPP_RND_FINANCIAL`.

enumerator **NPP\_RND\_ZERO**

Round towards zero (truncation).

All fractional numbers of the form `<integer>.<decimals>` are truncated to `<integer>`.

- ▶ `roundZero(1.5) = 1`
- ▶ `roundZero(1.9) = 1`
- ▶ `roundZero(-2.5) = -2`

enumerator **NPP\_ROUND\_TOWARD\_ZERO**

Alias name for `NPP_RND_ZERO`.

enum **NppiBorderType**

Supported image border modes.

*Values:*

enumerator **NPP\_BORDER\_UNDEFINED**

Image border type undefined.

enumerator **NPP\_BORDER\_NONE**

Image border type none.

enumerator **NPP\_BORDER\_CONSTANT**

Image border type constant value.

enumerator **NPP\_BORDER\_REPLICATE**

Image border type replicate border pixels.

enumerator **NPP\_BORDER\_WRAP**

Image border type wrap border pixels.

enumerator **NPP\_BORDER\_MIRROR**

Image border type mirror border pixels.

enum **NppHintAlgorithm**

Hints.

*Values:*

enumerator **NPP\_ALG\_HINT\_NONE**

Hint none, currently these are all ignored.

enumerator **NPP\_ALG\_HINT\_FAST**

Hint fast, currently these are all ignored.

enumerator **NPP\_ALG\_HINT\_ACCURATE**

Hint accurate, currently these are all ignored.

enum **NppiAlphaOp**

Alpha composition mode controls.

*Values:*

enumerator **NPPI\_OP\_ALPHA\_OVER**

Alpha composition over operation.

enumerator **NPPI\_OP\_ALPHA\_IN**

Alpha composition in operation.

enumerator **NPPI\_OP\_ALPHA\_OUT**

Alpha composition out operation.

enumerator **NPPI\_OP\_ALPHA\_ATOP**

Alpha composition atop operation.

enumerator **NPPI\_OP\_ALPHA\_XOR**

Alpha composition xor operation.

enumerator **NPPI\_OP\_ALPHA\_PLUS**

Alpha composition plus operation.

enumerator **NPPI\_OP\_ALPHA\_OVER\_PREMUL**

Alpha composition over premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_IN\_PREMUL**

Alpha composition in premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_OUT\_PREMUL**

Alpha composition out premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_ATOP\_PREMUL**

Alpha composition atop premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_XOR\_PREMUL**

Alpha composition xor premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_PLUS\_PREMUL**

Alpha composition plus premultiply operation.

enumerator **NPPI\_OP\_ALPHA\_PREMUL**

Alpha composition premultiply operation.

struct **NppiHOGConfig**

The NppiHOGConfig structure defines the configuration parameters for the HOG descriptor:

### Public Members

int **cellSize**

square cell size (pixels).

int **histogramBlockSize**

square histogram block size (pixels).

int **nHistogramBins**

required number of histogram bins.

*NppiSize* **detectionWindowSize**

detection window size (pixels).

**NPP\_HOG\_MAX\_CELL\_SIZE**

HOG Cell controls.

max horizontal/vertical pixel size of cell.

**NPP\_HOG\_MAX\_BLOCK\_SIZE**

max horizontal/vertical pixel size of block.

**NPP\_HOG\_MAX\_BINS\_PER\_CELL**

max number of histogram bins.

**NPP\_HOG\_MAX\_CELLS\_PER\_DESCRIPTOR**

max number of cells in a descriptor window.

**NPP\_HOG\_MAX\_OVERLAPPING\_BLOCKS\_PER\_DESCRIPTOR**

max number of overlapping blocks in a descriptor window.

**NPP\_HOG\_MAX\_DESCRIPTOR\_LOCATIONS\_PER\_CALL**

max number of descriptor window locations per function call.

struct **NppiHaarClassifier\_32f**

Data structure for HaarClassifier\_32f.

### Public Members

int **numClassifiers**  
number of classifiers.

*Npp32s* \***classifiers**  
packed classifier data 40 bytes each.

size\_t **classifierStep**  
packed classifier byte step.

*NppiSize* **classifierSize**  
packed classifier size.

*Npp32s* \***counterDevice**  
counter device.

struct **NppiHaarBuffer**  
Data structure for Haar buffer.

### Public Members

int **haarBufferSize**  
size of the buffer

*Npp32s* \***haarBuffer**  
buffer

enum **NppsZCType**  
Signal sign operations.

*Values:*

enumerator **nppZCR**  
sign change

enumerator **nppZCXor**  
sign change XOR

enumerator **nppZCC**  
sign change count\_0

enum **NppiHuffmanTableType**  
HuffMan Table controls.

*Values:*

enumerator **nppiDCTable**  
DC Table.

enumerator **nppiACTable**  
AC Table.

enum **NppiNorm**  
Norm controls.  
*Values:*

enumerator **nppiNormInf**  
maximum

enumerator **nppiNormL1**  
sum

enumerator **nppiNormL2**  
square root of sum of squares

struct **NppiConnectedRegion**  
Data structure of connected pixel region information.

### Public Members

*NppiRect* **oBoundingBox**  
x, y, width, height == left, top, right, and bottom pixel coordinates

*Npp32u* **nConnectedPixelCount**  
total number of pixels in connected region

*Npp32u* **aSeedPixelValue[3]**  
original pixel value of seed pixel, 1 or 3 channel

struct **NppiImageDescriptor**  
General image descriptor.  
Defines the basic parameters of an image, including data pointer, step, and image size. This can be used by both source and destination images.

### Public Members

void \***pData**  
device memory pointer to the image

int **nStep**  
step size

*NppiSize* **oSize**  
width and height of the image

struct **NppiBufferDescriptor**  
struct NppiBufferDescriptor

### Public Members

void \***pData**  
per image device memory pointer to the corresponding buffer

int **nBufferSize**  
allocated buffer size

struct **NppiCompressedMarkerLabelsInfo**  
Provides details of uniquely labeled pixel regions of interest returned by CompressedLabelMarkersUF function.

### Public Members

*Npp32u* **nMarkerLabelPixelCount**  
total number of pixels in this connected pixel region

*Npp32u* **nContourPixelCount**  
total number of pixels in this connected pixel region contour

*Npp32u* **nContourPixelsFound**  
total number of pixels in this connected pixel region contour found during geometry search

*NppiPoint* **oContourFirstPixelLocation**  
image geometric x and y location of the first pixel in the contour

*NppiRect* **oMarkerLabelBoundingBox**  
bounding box of this connected pixel region

struct **NppiContourBlockSegment**  
Provides details of contour pixel grid map location and association.

**Public Members*****Npp32u* nMarkerLabelID**

this connected pixel region contour ID

***Npp32u* nContourPixelCount**

total number of pixels in this connected pixel region contour

***Npp32u* nContourStartingPixelOffset**

base offset of starting pixel in the overall contour pixel list

***Npp32u* nSegmentNum**

relative block segment number within this particular contour ID

struct **NppiContourPixelGeometryInfo**

Provides contour (boundary) geometry info of uniquely labeled pixel regions returned by nppi-CompressedMarkerLabelsUInfo function in host memory in counterclockwise order relative to contour interiors.

**Public Members*****NppiPoint* oContourOrderedGeometryLocation**

image geometry X and Y location in requested output order

***NppiPoint* oContourPrevPixelLocation**

image geometry X and Y location of previous contour pixel

***NppiPoint* oContourCenterPixelLocation**

image geometry X and Y location of center contour pixel

***NppiPoint* oContourNextPixelLocation**

image geometry X and Y location of next contour pixel

***Npp32s* nOrderIndex**

contour pixel counterclockwise order index in geometry list

***Npp32s* nReverseOrderIndex**

contour pixel clockwise order index in geometry list

***Npp32u* nFirstIndex**

index of first ordered contour pixel in this subgroup

***Npp32u* nLastIndex**

index of last ordered contour pixel in this subgroup

*Npp32u* **nNextContourPixelIndex**

index of next ordered contour pixel in NppiContourPixelGeometryInfo list

*Npp32u* **nPrevContourPixelIndex**

index of previous ordered contour pixel in NppiContourPixelGeometryInfo list

*Npp8u* **nPixelAlreadyUsed**

this test pixel is has already been used

*Npp8u* **nAlreadyLinked**

this test pixel is already linked to center pixel

*Npp8u* **nAlreadyOutput**

this pixel has already been output in geometry list

*Npp8u* **nContourInteriorDirection**

direction of contour region interior

**NPP\_CONTOUR\_DIRECTION\_SOUTH\_EAST**

Provides contour (boundary) direction info of uniquely labeled pixel regions returned by CompressedLabelMarkersUF function.

Contour direction south east

**NPP\_CONTOUR\_DIRECTION\_SOUTH**

Contour direction south.

**NPP\_CONTOUR\_DIRECTION\_SOUTH\_WEST**

Contour direction south west.

**NPP\_CONTOUR\_DIRECTION\_WEST**

Contour direction west.

**NPP\_CONTOUR\_DIRECTION\_EAST**

Contour direction east.

**NPP\_CONTOUR\_DIRECTION\_NORTH\_EAST**

Contour direction north east.

**NPP\_CONTOUR\_DIRECTION\_NORTH**

Contour direction north.

**NPP\_CONTOUR\_DIRECTION\_NORTH\_WEST**

Contour direction north west.

**NPP\_CONTOUR\_DIRECTION\_ANY\_NORTH**

Provides contour (boundary) diagonal direction info of uniquely labeled pixel regions returned by CompressedLabelMarkersUF function.

Contour direction any north

**NPP\_CONTOUR\_DIRECTION\_ANY\_WEST**

Contour direction any west.

**NPP\_CONTOUR\_DIRECTION\_ANY\_SOUTH**

Contour direction any south.

**NPP\_CONTOUR\_DIRECTION\_ANY\_EAST**

Contour direction any east.

**struct NppiContourPixelDirectionInfo**

Data structure for contour pixel direction information.

**Public Members***Npp32u* **nMarkerLabelID**

MarkerLabelID of contour interior connected region.

*Npp8u* **nContourDirectionCenterPixel**

provides current center contour pixel input and output direction info

*Npp8u* **nContourInteriorDirectionCenterPixel**

provides current center contour pixel region interior direction info

*Npp8u* **nConnected**

direction to directly connected contour pixels, 0 if not connected

*Npp8u* **nGeometryInfoIsValid**

direction to directly connected contour pixels, 0 if not connected

*NppiContourPixelGeometryInfo* **oContourPixelGeometryInfo**

Pixel geometry info structure.

*NppiPoint* **nEast1**

Pixel coordinate values in each direction.

*NppiPoint* **nNorthEast1**

Pixel coordinate values in each direction.

*NppiPoint* **nNorth1**

Pixel coordinate values in each direction.

*NppiPoint* **nNorthWest1**

Pixel coordinate values in each direction.

*NppiPoint* **nWest1**

Pixel coordinate values in each direction.

*NppiPoint* **nSouthWest1**

Pixel coordinate values in each direction.

*NppiPoint* **nSouth1**

Pixel coordinate values in each direction.

*NppiPoint* **nSouthEast1**

Pixel coordinate values in each direction.

*Npp8u* **nTest1EastConnected**

East connected flag.

*Npp8u* **nTest1NorthEastConnected**

North east connected flag.

*Npp8u* **nTest1NorthConnected**

North connected flag.

*Npp8u* **nTest1NorthWestConnected**

North west connected flag.

*Npp8u* **nTest1WestConnected**

West connected flag.

*Npp8u* **nTest1SouthWestConnected**

South west connected flag.

*Npp8u* **nTest1SouthConnected**

South connected flag.

*Npp8u* **nTest1SouthEastConnected**

South east connected flag.

struct **NppiContourTotalsInfo**

Data structure for contour total counts.

## Public Members

**Npp32u nTotalImagePixelContourCount**

total number of contour pixels in image

**Npp32u nLongestImageContourPixelCount**

longest per contour pixel count in image

enum **NppiWatershedSegmentBoundaryType**

Provides control of the type of segment boundaries, if any, added to the image generated by the watershed segmentation function.

*Values:*

enumerator **NPP\_WATERSHED\_SEGMENT\_BOUNDARIES\_NONE**

Image watershed segment boundary type none.

enumerator **NPP\_WATERSHED\_SEGMENT\_BOUNDARIES\_BLACK**

Image watershed segment boundary type black.

enumerator **NPP\_WATERSHED\_SEGMENT\_BOUNDARIES\_WHITE**

Image watershed segment boundary type white.

enumerator **NPP\_WATERSHED\_SEGMENT\_BOUNDARIES\_CONTRAST**

Image watershed segment boundary type contrasting intensity.

enumerator **NPP\_WATERSHED\_SEGMENT\_BOUNDARIES\_ONLY**

Image watershed segment boundary type render boundaries only.

struct **NppStreamContext**

## 1.5.1. Application Managed Stream Context

NPP stream context structure must be filled in by application. Application should not initialize or alter reserved fields.

## Public Members

**cudaStream\_t hStream**

From current Cuda stream ID.

**int nCudaDeviceId**

From `cudaGetDevice()`.

int **nMultiProcessorCount**

From cudaGetDeviceProperties().

int **nMaxThreadsPerMultiProcessor**

From cudaGetDeviceProperties().

int **nMaxThreadsPerBlock**

From cudaGetDeviceProperties().

size\_t **nSharedMemPerBlock**

From cudaGetDeviceProperties().

int **nCudaDevAttrComputeCapabilityMajor**

From cudaGetDeviceAttribute().

int **nCudaDevAttrComputeCapabilityMinor**

From cudaGetDeviceAttribute().

unsigned int **nStreamFlags**

From cudaStreamGetFlags().

int **nReserved0**

reserved, do not alter.

struct **NppiResizeBatchCXR**

NPP Batch Geometry Structure Definitions.

### Public Members

const void **\*pSrc**

source image device memory pointer.

int **nSrcStep**

source image byte count per row.

void **\*pDst**

destination image device memory pointer.

int **nDstStep**

device image byte count per row.

struct **NppiResizeBatchROI\_Advanced**

Data structure for variable ROI image batch resizing.

**Public Members***NppiRect* **oSrcRectROI**

per source image rectangle parameters.

*NppiRect* **oDstRectROI**

per destination image rectangle parameters.

struct **NppiMirrorBatchCXR**

Data structure for batched nppiMirrorBatch.

**Public Members**const void **\*pSrc**

source image device memory pointer, ignored for in-place versions.

int **nSrcStep**

source image byte count per row.

void **\*pDst**

destination image device memory pointer.

int **nDstStep**

device image byte count per row.

struct **NppiWarpAffineBatchCXR**

Data structure for batched nppiWarpAffineBatch.

**Public Members**const void **\*pSrc**

source image device memory pointer.

int **nSrcStep**

source image byte count per row.

void **\*pDst**

destination image device memory pointer.

int **nDstStep**

device image byte count per row.

*Npp64f* \*pCoeffs

device memory pointer to the transformation matrix with double precision floating-point coefficient values to be used for this image.

*Npp64f* aTransformedCoeffs[2][3]

FOR INTERNAL USE, DO NOT INITIALIZE.

struct **NppiWarpPerspectiveBatchCXR**

Data structure for batched nppiWarpPerspectiveBatch.

### Public Members

const void \*pSrc

source image device memory pointer.

int nSrcStep

source image byte count per row.

void \*pDst

destination image device memory pointer.

int nDstStep

device image byte count per row.

*Npp64f* \*pCoeffs

device memory pointer to the transformation matrix with double precision floating-point coefficient values to be used for this image.

*Npp64f* aTransformedCoeffs[3][3]

FOR INTERNAL USE, DO NOT INITIALIZE.

struct **NppiColorTwistBatchCXR**

Data structure for batched nppiColorTwistBatch.

### Public Members

const void \*pSrc

source image device memory pointer.

int nSrcStep

source image byte count per row.

void \*pDst

destination image device memory pointer.

int **nDstStep**

device image byte count per row.

*Npp32f* \***pTwist**

device memory pointer to the color twist matrix with floating-point coefficient values to be used for this image.

Basic functions for library management, in particular library version and device property query functions.

## Functions

const *NppLibraryVersion* \***nppGetLibVersion**(void)

Get the NPP library version.

**Returns** A struct containing separate values for major and minor revision and build number.

int **nppGetGpuNumSMs**(void)

Get the number of Streaming Multiprocessors (SM) on the active CUDA device.

**Returns** Number of SMs of the default CUDA device.

int **nppGetMaxThreadsPerBlock**(void)

Get the maximum number of threads per block on the active CUDA device.

**Returns** Maximum number of threads per block on the active CUDA device.

int **nppGetMaxThreadsPerSM**(void)

Get the maximum number of threads per SM for the active GPU.

**Returns** Maximum number of threads per SM for the active GPU

int **nppGetGpuDeviceProperties**(int \*pMaxThreadsPerSM, int \*pMaxThreadsPerBlock, int \*pNumberOfSMs)

Get the maximum number of threads per SM, maximum threads per block, and number of SMs for the active GPU.

**Returns** cudaSuccess for success, -1 for failure

const char \***nppGetGpuName**(void)

Get the name of the active CUDA device.

**Returns** Name string of the active graphics-card/compute device in a system.

cudaStream\_t **nppGetStream**(void)

Get the NPP CUDA stream.

NPP enables concurrent device tasks via a global stream state variable. The NPP stream by default is set to stream 0, i.e. non-concurrent mode. A user can set the NPP stream to any valid CUDA stream. All CUDA commands issued by NPP (e.g. kernels launched by the NPP library) are then issued to that NPP stream.

*NppStatus* **nppGetStreamContext**(*NppStreamContext* \*pNppStreamContext)

Get the current NPP managed CUDA stream context as set by calls to *nppSetStream()*.

NPP enables concurrent device tasks via an NPP maintained global stream state context. The NPP stream by default is set to stream 0, i.e. non-concurrent mode. A user can set the NPP

stream to any valid CUDA stream which will update the current NPP managed stream state context or supply application initialized stream contexts to NPP calls. All CUDA commands issued by NPP (e.g. kernels launched by the NPP library) are then issued to the current NPP managed stream or to application supplied stream contexts depending on whether the stream context is passed to the NPP function or not. NPP managed stream context calls (those without stream context parameters) can be intermixed with application managed stream context calls but any NPP managed stream context calls will always use the most recent stream set by *nppSetStream()* or the NULL stream if *nppSetStream()* has never been called.

unsigned int **nppGetStreamNumSMs**(void)

Get the number of SMs on the device associated with the current NPP CUDA stream.

NPP enables concurrent device tasks via a global stream state variable. The NPP stream by default is set to stream 0, i.e. non-concurrent mode. A user can set the NPP stream to any valid CUDA stream. All CUDA commands issued by NPP (e.g. kernels launched by the NPP library) are then issued to that NPP stream. This call avoids a *cudaGetDeviceProperties()* call.

unsigned int **nppGetStreamMaxThreadsPerSM**(void)

Get the maximum number of threads per SM on the device associated with the current NPP CUDA stream.

NPP enables concurrent device tasks via a global stream state variable. The NPP stream by default is set to stream 0, i.e. non-concurrent mode. A user can set the NPP stream to any valid CUDA stream. All CUDA commands issued by NPP (e.g. kernels launched by the NPP library) are then issued to that NPP stream. This call avoids a *cudaGetDeviceProperties()* call.

*NppStatus* **nppSetStream**(*cudaStream\_t* hStream)

Set the NPP CUDA stream.

This function now returns an error if a problem occurs with Cuda stream management. This function should only be called if a call to *nppGetStream()* returns a stream number which is different from the desired stream since unnecessarily flushing the current stream can significantly affect performance.

**See also:**

*nppGetStream()*

## 1.6. Image Arithmetic And Logical Operations

These functions can be found in the *nppial* library.

Linking to only the sub-libraries that you use can significantly save link time, application load time, and CUDA runtime startup time when using dynamic libraries.

## 1.6.1. Arithmetic Operations

### 1.6.1.1 Arithmetic Operations

The set of image processing arithmetic operations available in the library.

### 1.6.1.2 AddC

Adds a constant value to each pixel of an image.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

#### Functions

`NppStatus nppiAddC_8u_C1RSfs_Ctx`(const `Npp8u` \*pSrc1, int nSrc1Step, const `Npp8u` nConstant, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, int nScaleFactor, `NppStreamContext` nppStreamCtx)

One 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

`NppStatus nppiAddC_8u_C1RSfs`(const `Npp8u` \*pSrc1, int nSrc1Step, const `Npp8u` nConstant, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – pointer to device memory Constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C1IRSfs\_Ctx**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C1IRSfs**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_C1IRSfs\_Ctx**(const *Npp8u* \*pConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – pointer to device memory Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_8u\_C3IRSfs\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_8u\_C3IRSfs**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel 8-bit unsigned char in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_AC4IRSfs**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiAddDeviceC_8u_C4RSfs_Ctx( const Npp8u *pSrc1, int nSrc1Step, const Npp8u
                                         *pConstants, Npp8u *pDst, int nDstStep, NppiSize
                                         oSizeROI, int nScaleFactor, NppStreamContext
                                         nppStreamCtx )
```

Four 8-bit unsigned char channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiAddC_8u_C4IRSfs_Ctx( const Npp8u aConstants[4], Npp8u *pSrcDst, int
                                         nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                         NppStreamContext nppStreamCtx )
```

Four 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_8u\_C4IRSfs**( const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_8u\_C4IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C1RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C1IRSfs**( const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16u\_C1IRSfs\_Ctx**( const *Npp16u* \*pConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C3RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C3RSfs**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16u\_C3RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C3IRSfs\_Ctx**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C3IRSfs**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Three 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16u\_C3IRSfs\_Ctx**( const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Three 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_AC4RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 16-bit unsigned short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_AC4IRSfs\_Ctx**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_AC4IRSfs**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16u\_AC4IRSfs\_Ctx**( const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16u\_C4IRSfs**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C1IRSfs**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiAddC_16s_C3RSfs_Ctx(const Npp16s *pSrc1, int nSrc1Step, const Npp16s  
                                aConstants[3], Npp16s *pDst, int nDstStep, NppiSize  
                                oSizeROI, int nScaleFactor, NppStreamContext  
                                nppStreamCtx)
```

Three 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiAddC_16s_C3RSfs(const Npp16s *pSrc1, int nSrc1Step, const Npp16s  
                               aConstants[3], Npp16s *pDst, int nDstStep, NppiSize oSizeROI,  
                               int nScaleFactor)
```

Three 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiAddDeviceC_16s_C3RSfs_Ctx(const Npp16s *pSrc1, int nSrc1Step, const Npp16s  
                                          *pConstants, Npp16s *pDst, int nDstStep, NppiSize  
                                          oSizeROI, int nScaleFactor, NppStreamContext  
                                          nppStreamCtx)
```

Three 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C3IRSfs\_Ctx**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C3IRSfs**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_AC4IRSfs**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16s\_C4RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16s\_C4IRSfs\_Ctx**( const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16s\_C4IRSfs**( const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *host memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_C1IRSfs**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16sc\_C3RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16sc\_C3IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16sc\_C3IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_AC4RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16sc\_AC4RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16sc\_AC4IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16sc\_AC4IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32s\_C1RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32s\_C1RSfs**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *host memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32s\_C1RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – *device memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32s\_C1IRSfs\_Ctx**( const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32s\_C1IRSfs**( const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_32s\_C1IRSfs\_Ctx**( const *Npp32s* \*pConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32s\_C3RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32s\_C3RSfs**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_32s\_C3RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstants, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32s\_C3IRSfs\_Ctx**( const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32s\_C3IRSfs**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pConstants, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C1RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C1IRSfs\_Ctx**( const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C1IRSfs**( const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C3RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C3RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C3IRSfs\_Ctx**(const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_C3IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_AC4RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32sc\_AC4RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32sc\_AC4IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image add constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C1IR**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_16f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C3IR**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_16f\_C4IR**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_16f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image add constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddDeviceC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image add constant.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddC\_32f\_C1IR**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image add constant.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image add constant.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C3IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image add constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_AC4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit floating point channel with unmodified alpha image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_AC4R**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 32-bit floating point channel with unmodified alpha image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_AC4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit floating point channel with unmodified alpha image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_AC4IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_AC4IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image add constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image add constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C4IR\_Ctx**( const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32f\_C4IR**( const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddDeviceC\_32f\_C4IR\_Ctx**( const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image add constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C1R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C1IR\_Ctx**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C1IR**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C3R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C3R**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C3IR\_Ctx**( const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C3IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_AC4IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_AC4IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image add constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image add constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C4IR\_Ctx**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddC\_32fc\_C4IR**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image add constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.3 MulC

Multiplies each pixel of an image by a constant value.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

## Functions

*NppStatus* **nppiMulC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C1IRSfs\_Ctx**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C1IRSfs**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_8u\_C1IRSfs\_Ctx**( const *Npp8u* \*pConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_8u_C3IRSfs_Ctx(const Npp8u aConstants[3], Npp8u *pSrcDst, int
                                nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                NppStreamContext nppStreamCtx)
```

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_8u_C3IRSfs(const Npp8u aConstants[3], Npp8u *pSrcDst, int nSrcDstStep,
                               NppiSize oSizeROI, int nScaleFactor)
```

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulDeviceC_8u_C3IRSfs_Ctx(const Npp8u *pConstants, Npp8u *pSrcDst, int
                                          nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                          NppStreamContext nppStreamCtx)
```

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_8u_AC4IRSfs_Ctx(const Npp8u aConstants[3], Npp8u *pSrcDst, int  
nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,  
NppStreamContext nppStreamCtx)
```

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_8u_AC4IRSfs(const Npp8u aConstants[3], Npp8u *pSrcDst, int nSrcDstStep,  
NppiSize oSizeROI, int nScaleFactor)
```

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C4IRSfs\_Ctx**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_8u\_C4IRSfs**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *host memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – *device memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C1IRSfs**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C3IRSfs\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C3IRSfs**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Three 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_C3IRSfs\_Ctx**( const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Three 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_AC4RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16u\_AC4RSfs**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16u\_AC4RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16u\_AC4IRSfs\_Ctx**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_AC4IRSfs**( const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_AC4IRSfs\_Ctx**( const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C4RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16u\_C4RSfs**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16u\_C4RSfs\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16u\_C4IRSfs**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C1IRSfs**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_16s_C3IRSfs_Ctx(const Npp16s aConstants[3], Npp16s *pSrcDst, int
                                   nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                   NppStreamContext nppStreamCtx)
```

Three 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_16s_C3IRSfs(const Npp16s aConstants[3], Npp16s *pSrcDst, int
                                nSrcDstStep, NppiSize oSizeROI, int nScaleFactor)
```

Three 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulDeviceC_16s_C3IRSfs_Ctx(const Npp16s *pConstants, Npp16s *pSrcDst, int
                                           nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                           NppStreamContext nppStreamCtx)
```

Three 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_16s_AC4IRSfs_Ctx( const Npp16s aConstants[3], Npp16s *pSrcDst, int
                                     nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                     NppStreamContext nppStreamCtx)
```

Four 16-bit signed short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiMulC_16s_AC4IRSfs( const Npp16s aConstants[3], Npp16s *pSrcDst, int
                                   nSrcDstStep, NppiSize oSizeROI, int nScaleFactor)
```

Four 16-bit signed short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16s\_C4IRSfs**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C1IRSfs**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C3RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C3IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_C3IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16sc\_AC4RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16sc\_AC4RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_AC4IRSfs\_Ctx**(const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16sc\_AC4IRSfs**(const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32s\_C1RSfs**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32s\_C1RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32s\_C1RSfs\_Ctx**( const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32s\_C1IRSfs**( const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32s\_C1IRSfs\_Ctx**( const *Npp32s* \*pConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – *device memory constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32s\_C3RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel*.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32s\_C3RSfs**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_32s\_C3RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstants, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32s\_C3IRSfs\_Ctx**( const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32s\_C3IRSfs**( const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32s\_C3IRSfs\_Ctx**( const *Npp32s* \*pConstants, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_C1IRSfs\_Ctx**(const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32sc\_C1IRSfs**( const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32sc\_C3RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32sc\_C3RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image multiply by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_C3IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_C3IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_AC4RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_AC4RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32sc\_AC4IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiply by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – 32-bit floating point host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – 32-bit floating point host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – 32-bit floating point device memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **nConstant** – 32-bit floating point host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C1IR**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **nConstant** – 32-bit floating point host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **pConstant** – 32-bit floating point device memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16f\_C3IR**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_16f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_16f\_C4IR**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_16f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32f\_C1IR**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_C3R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit floating point channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C3IR\_Ctx**( const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C3IR**( const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Three 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_C3IR\_Ctx**( const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image multiply by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_AC4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_AC4R**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image multiply by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_AC4IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_AC4IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image multiply by constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32f\_C4IR**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceC\_32f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image multiply by constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C1R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C1R**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C1IR\_Ctx**( const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C1IR**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C3IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C3IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image multiply by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_AC4IR\_Ctx**( const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_AC4IR**( const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image multiply by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulC\_32fc\_C4R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image multiply by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32fc\_C4IR\_Ctx**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulC\_32fc\_C4IR**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image multiply by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

### 1.6.1.4 MulCScale

Multiplies each pixel of an image by a constant value then scales the result by the maximum value for the data bit width.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

#### Functions

`NppStatus nppiMulCScale_8u_C1R_Ctx`(const `Npp8u` \*pSrc1, int nSrc1Step, const `Npp8u` nConstant, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, `NppStreamContext` nppStreamCtx)

One 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

`NppStatus nppiMulCScale_8u_C1R`(const `Npp8u` \*pSrc1, int nSrc1Step, const `Npp8u` nConstant, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI)

One 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

`NppStatus nppiMulDeviceCScale_8u_C1R_Ctx`(const `Npp8u` \*pSrc1, int nSrc1Step, const `Npp8u` \*pConstant, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, `NppStreamContext` nppStreamCtx)

One 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C1IR\_Ctx**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C1IR**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_8u\_C1IR\_Ctx**(const *Npp8u* \*pConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C3IR\_Ctx**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C3IR**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_8u\_C3IR\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_AC4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiMulCScale_8u_AC4R(const Npp8u *pSrc1, int nSrc1Step, const Npp8u
                                aConstants[3], Npp8u *pDst, int nDstStep, NppiSize
                                oSizeROI)
```

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiMulDeviceCScale_8u_AC4R_Ctx(const Npp8u *pSrc1, int nSrc1Step, const Npp8u
                                           *pConstants, Npp8u *pDst, int nDstStep,
                                           NppiSize oSizeROI, NppStreamContext
                                           nppStreamCtx)
```

Four 8-bit unsigned char channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_AC4IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_AC4IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_8u\_AC4IR\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image multiply by constant, scale and scale by max bit width value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceCScale\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C4IR\_Ctx**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_8u\_C4IR**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_8u\_C4IR\_Ctx**(const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceCScale\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C1IR\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C1IR**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_16u\_C1IR\_Ctx**(const *Npp16u* \*pConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceCScale\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C3IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C3IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_16u\_C3IR\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiMulDeviceCScale_16u_AC4R_Ctx(const Npp16u *pSrc1, int nSrc1Step, const
                                             Npp16u *pConstants, Npp16u *pDst, int
                                             nDstStep, NppiSize oSizeROI,
                                             NppStreamContext nppStreamCtx)
```

Four 16-bit unsigned short channel with unmodified alpha image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiMulCScale_16u_AC4IR_Ctx(const Npp16u aConstants[3], Npp16u *pSrcDst, int
                                       nSrcDstStep, NppiSize oSizeROI, NppStreamContext
                                       nppStreamCtx)
```

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant and scale by max bit width value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_AC4IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_16u\_AC4IR\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulCScale\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulDeviceCScale\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C4IR\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulCScale\_16u\_C4IR**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulDeviceCScale\_16u\_C4IR\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiply by constant and scale by max bit width value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

**1.6.1.5 SubC**

Subtracts a constant value from each pixel of an image.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

**Functions**

*NppStatus* **nppiSubC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_8u\_C1RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_8u\_C1RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_8u\_C1IRSfs\_Ctx**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C1IRSfs**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – *host memory constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_8u\_C1IRSfs\_Ctx**( const *Npp8u* \*pConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – *device memory constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C3RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_8u\_C3RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_8u\_C3RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u*  
\*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize*  
oSizeROI, int nScaleFactor, *NppStreamContext*  
nppStreamCtx)

Three 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_8u\_C3IRSfs\_Ctx**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int  
nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor,  
*NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C3IRSfs**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel 8-bit unsigned char in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_8u\_C3IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_AC4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_AC4RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_8u\_AC4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_AC4IRSfs**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C4IRSfs\_Ctx**( const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_8u\_C4IRSfs**( const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_8u\_C4IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C1IRSfs**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C3IRSfs\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C3IRSfs**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_AC4IRSfs**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16u\_C4IRSfs**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16u\_C4IRSfs\_Ctx**( const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C1RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C1RSfs**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16s\_C1RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_C1IRSfs\_Ctx**( const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_C1IRSfs**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_C3IRSfs\_Ctx**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_C3IRSfs**( const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Three 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16s\_C3IRSfs\_Ctx**( const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Three 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_AC4RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 16-bit signed short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_AC4IRSfs**( const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16s\_AC4IRSfs\_Ctx**( const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C4RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiSubC_16s_C4RSfs(const Npp16s *pSrc1, int nSrc1Step, const Npp16s  
                             aConstants[4], Npp16s *pDst, int nDstStep, NppiSize oSizeROI,  
                             int nScaleFactor)
```

Four 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiSubDeviceC_16s_C4RSfs_Ctx(const Npp16s *pSrc1, int nSrc1Step, const Npp16s  
                                         *pConstants, Npp16s *pDst, int nDstStep, NppiSize  
                                         oSizeROI, int nScaleFactor, NppStreamContext  
                                         nppStreamCtx)
```

Four 16-bit signed short channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16s\_C4IRSfs**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_C1IRSfs**( const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_C3RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_C3RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_C3IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_C3IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_AC4RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_AC4RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_AC4IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16sc\_AC4IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32s\_C1RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *host memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32s\_C1RSfs\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32s\_C1IRSfs\_Ctx**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32s\_C1IRSfs**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

Three 32-bit signed integer channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size host memory array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstants, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiSubC_32s_C3IRSfs_Ctx(const Npp32s aConstants[3], Npp32s *pSrcDst, int
                                   nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                   NppStreamContext nppStreamCtx)
```

Three 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

```
NppStatus nppiSubC_32s_C3IRSfs(const Npp32s aConstants[3], Npp32s *pSrcDst, int
                                   nSrcDstStep, NppiSize oSizeROI, int nScaleFactor)
```

Three 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pConstants, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C1IRSfs\_Ctx**( const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C1IRSfs**( const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C3RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C3RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C3IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32sc\_C3IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image subtract constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_AC4RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_AC4RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32sc\_AC4IRSfs**(const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtract constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory 32-bit floating point constant.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_16f\_C1IR**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_16f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C3IR**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_16f\_C4IR**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_16f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstant** – *device memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C1IR\_Ctx**( const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C1IR**( const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_C1IR\_Ctx**( const *Npp32f* \*pConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C3R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3],  
*Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubDeviceC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f*  
\*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize*  
oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int  
nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext*  
nppStreamCtx)

Three 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C3IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_AC4IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_AC4IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image subtract constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.

- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32f\_C4IR**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubDeviceC\_32f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image subtract constant.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C1IR\_Ctx**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C1IR**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32fc\_C3IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32fc\_C3IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSubC\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_AC4IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_AC4IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C4R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C4R**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image subtract constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C4IR\_Ctx**( const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSubC\_32fc\_C4IR**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image subtract constant.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.6 DivC

Divides each pixel of an image by a constant value.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

### Functions

*NppStatus* **nppiDivC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_C1IRSfs\_Ctx**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_C1IRSfs**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_8u\_C1IRSfs\_Ctx**( const *Npp8u* \*pConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C3RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C3RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_8u\_C3RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u*  
*\*pConstants*, *Npp8u* \*pDst, int nDstStep, *NppiSize*  
oSizeROI, int nScaleFactor, *NppStreamContext*  
nppStreamCtx)

Three 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C3IRSfs\_Ctx**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int  
nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor,  
*NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C3IRSfs**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel 8-bit unsigned char in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_8u\_C3IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel 8-bit unsigned char in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_AC4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_AC4RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_8u\_AC4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_AC4IRSfs**( const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_C4RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_8u\_C4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u*  
\*pConstants, *Npp8u* \*pDst, int nDstStep, *NppiSize*  
oSizeROI, int nScaleFactor, *NppStreamContext*  
nppStreamCtx)

Four 8-bit unsigned char channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_8u\_C4IRSfs\_Ctx**( const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_8u\_C4IRSfs**( const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_8u\_C4IRSfs\_Ctx**( const *Npp8u* \*pConstants, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C1IRSfs**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C3IRSfs\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C3IRSfs**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_AC4IRSfs**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pConstants, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16u\_C4IRSfs**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pConstants, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16s\_C1RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_C1IRSfs\_Ctx**( const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_C1IRSfs**(const *Npp16s* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C3IRSfs\_Ctx**(const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C3IRSfs**( const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Three 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16s\_C3IRSfs\_Ctx**( const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Three 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_AC4RSfs\_Ctx**( const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 16-bit signed short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_AC4IRSfs\_Ctx**( const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_AC4IRSfs**( const *Npp16s* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16s\_AC4IRSfs\_Ctx**( const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pConstants, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16s\_C4IRSfs**(const *Npp16s* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pConstants, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* nConstant, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C1IRSfs**(const *Npp16sc* nConstant, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C3RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C3IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_C3IRSfs**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16sc\_AC4RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16sc\_AC4RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* aConstants[3], *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16sc\_AC4IRSfs\_Ctx**( const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16sc\_AC4IRSfs**(const *Npp16sc* aConstants[3], *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32s\_C1RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – *device memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32s\_C1RSfs\_Ctx**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32s\_C1RSfs**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **nConstant** – *host memory constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pConstants, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32s\_C3IRSfs\_Ctx**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32s\_C3IRSfs**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pConstants, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* nConstant, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C1IRSfs\_Ctx**(const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C1IRSfs**(const *Npp32sc* nConstant, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C3RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiDivC_32sc_C3RSfs( const Npp32sc *pSrc1, int nSrc1Step, const Npp32sc
                                aConstants[3], Npp32sc *pDst, int nDstStep, NppiSize
                                oSizeROI, int nScaleFactor)
```

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiDivC_32sc_C3IRSfs_Ctx( const Npp32sc aConstants[3], Npp32sc *pSrcDst, int
                                      nSrcDstStep, NppiSize oSizeROI, int nScaleFactor,
                                      NppStreamContext nppStreamCtx)
```

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_C3IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel in place image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_AC4RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_AC4RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* aConstants[3], *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha image divided by constant, scale, then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32sc\_AC4IRSfs**( const *Npp32sc* aConstants[3], *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed complex integer (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image divided by constant, scale, then clamp to saturated value.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C1R\_Ctx**( const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C1IR**(const *Npp32f* nConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **nConstant** – host memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstant** – device memory 32-bit floating point constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16f\_C3IR\_Ctx**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_16f\_C3IR**(const *Npp32f* aConstants[3], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16f\_C3IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_16f\_C4IR**(const *Npp32f* aConstants[4], *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_16f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of 32-bit floating point constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* nConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstant, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32f\_C1IR\_Ctx**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32f\_C1IR**(const *Npp32f* nConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivDeviceC\_32f\_C1IR\_Ctx**(const *Npp32f* \*pConstant, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstant** – device memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C3IR\_Ctx**( const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C3IR**( const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_C3IR\_Ctx**( const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_AC4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[3], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image divided by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image divided by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_AC4IR\_Ctx**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_AC4IR**(const *Npp32f* aConstants[3], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image divided by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image divided by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* aConstants[4], *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pConstants, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C4IR\_Ctx**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32f\_C4IR**(const *Npp32f* aConstants[4], *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **aConstants** – fixed size host memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivDeviceC\_32f\_C4IR\_Ctx**(const *Npp32f* \*pConstants, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image divided by constant.

**Parameters**

- ▶ **pConstants** – fixed size device memory array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* nConstant, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C1IR\_Ctx**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C1IR**(const *Npp32fc* nConstant, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **nConstant** – host memory constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C3IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_C3IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDivC\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[3], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha image divided by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_AC4IR\_Ctx**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_AC4IR**(const *Npp32fc* aConstants[3], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel with unmodified alpha in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* aConstants[4], *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel image divided by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C4IR\_Ctx**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDivC\_32fc\_C4IR**(const *Npp32fc* aConstants[4], *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit complex floating point (32-bit floating point real, 32-bit floating point imaginary) channel in place image divided by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of host memory constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.7 AbsDiffC

Determines absolute difference between each pixel of an image and a constant value.

Note: If you use one of the device constant versions of these functions and the function called immediately preceding that function generates that device constant you MUST either call `cudaStreamSynchronize()` or `cudaDeviceSynchronize()` before calling the device constant function.

#### Functions

*NppStatus* **nppiAbsDiffC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nConstant, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image absolute difference with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffC\_8u\_C1R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nConstant)

One 8-bit unsigned char channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffDeviceC\_8u\_C1R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* \*pConstant, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pConstant** – *device memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffC\_16u\_C1R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp16u* nConstant, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *host memory constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffC\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp16u* nConstant)

One 16-bit unsigned short channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffDeviceC\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp16u* \*pConstant, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – device memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp32f* nConstant, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – host memory constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp32f* nConstant)

One 32-bit floating point channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *host memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiffDeviceC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp32f* \*pConstant, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image absolute difference with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pConstant** – *device memory constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.8 Add

Pixel by pixel addition of two images.

### Functions

*NppStatus* **nppiAdd\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C1IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C3IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.

- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image addition, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image addition, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_AC4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_8u\_C4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.

- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image addition, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image addition, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C1IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C3IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_AC4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16u\_C4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16s\_C1IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C3IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_AC4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16s\_C4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C1IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C3RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C3IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_C3IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_AC4RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image addition, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_AC4RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_AC4IRSfs\_Ctx**( const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16sc\_AC4IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image add. Add the pixel values of corresponding pixels in the ROI and write them to the output image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image add. Add the pixel values of corresponding pixels in the ROI and write them to the output image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C1IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image addition, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image addition, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32s\_C3IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image addition, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_C1RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_C1RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_C1IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_C1IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_C3RSfs\_Ctx**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32sc\_C3RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32sc\_C3IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32sc\_C3IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_AC4RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_AC4RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image addition, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32sc\_AC4IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image addition, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C1R\_Ctx**( const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16f\_C1IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16f\_C1IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C3IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C3IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image addition.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image addition.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C4IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image addition.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_16f\_C4IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image addition.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image addition.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image addition.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C3IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C3IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_AC4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32f\_C4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32f\_C4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C1IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C1IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAdd\_32fc\_C3IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C3IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image addition.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image addition.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_AC4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_AC4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image addition.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image addition.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAdd\_32fc\_C4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image addition.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.9 AddSquare

Pixel by pixel addition of squared pixels from source image to floating point pixel values of destination image.

#### Functions

*NppStatus* **nppiAddSquare\_8u32f\_C1IMR\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_8u32f\_C1IMR**( const *Npp8u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_8u32f\_C1IR\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image squared then added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddSquare\_8u32f\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image squared then added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddSquare\_16u32f\_C1IMR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pMask** – *Mask-Image Pointer.*
- ▶ **nMaskStep** – *Mask-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddSquare\_16u32f\_C1IMR**(const *Npp16u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_16u32f\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image squared then added to in place floating point destination image.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_16u32f\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image squared then added to in place floating point destination image.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_32f\_C1IMR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_32f\_C1IMR**(const *Npp32f* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image squared then added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddSquare\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image squared then added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddSquare\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image squared then added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.10 AddProduct

Pixel by pixel addition of product of pixels from two source images to floating point pixel values of destination image.

#### Functions

*NppStatus* **nppiAddProduct\_8u32f\_C1IMR\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pMask** – *Mask-Image Pointer*.
- ▶ **nMaskStep** – *Mask-Image Line Step*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddProduct\_8u32f\_C1IMR**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pMask** – *Mask-Image Pointer.*
- ▶ **nMaskStep** – *Mask-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddProduct\_8u32f\_C1IR\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image product added to in place floating point destination image.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddProduct\_8u32f\_C1IR**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image product added to in place floating point destination image.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16u32f\_C1IMR\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16u32f\_C1IMR**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.

- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16u32f\_C1IR\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image product added to in place floating point destination image.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16u32f\_C1IR**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image product added to in place floating point destination image.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_32f\_C1IMR\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiAddProduct_32f_C1IMR(const Npp32f *pSrc1, int nSrc1Step, const Npp32f
    *pSrc2, int nSrc2Step, const Npp8u *pMask, int
    nMaskStep, Npp32f *pSrcDst, int nSrcDstStep, NppiSize
    oSizeROI)
```

One 32-bit floating point channel image product added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiAddProduct_32f_C1IR_Ctx(const Npp32f *pSrc1, int nSrc1Step, const Npp32f
    *pSrc2, int nSrc2Step, Npp32f *pSrcDst, int
    nSrcDstStep, NppiSize oSizeROI, NppStreamContext
    nppStreamCtx)
```

One 32-bit floating point channel image product added to in place floating point destination image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_32f\_C1IR**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image product added to in place floating point destination image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16f\_C1IR\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image product added to in place floating point destination image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddProduct\_16f\_C1IR**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image product added to in place floating point destination image.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

#### 1.6.1.11 AddWeighted

Pixel by pixel addition of alpha weighted pixel values from a source image to floating point pixel values of destination image.

#### Functions

*NppStatus* **nppiAddWeighted\_8u32f\_C1IMR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddWeighted\_8u32f\_C1IMR**(const *Npp8u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 8-bit unsigned char channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddWeighted\_8u32f\_C1IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel alpha weighted image added to in place floating point destination image.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddWeighted\_8u32f\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 8-bit unsigned char channel alpha weighted image added to in place floating point destination image.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_16u32f\_C1IMR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_16u32f\_C1IMR**(const *Npp16u* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 16-bit unsigned short channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_16u32f\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel alpha weighted image added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddWeighted\_16u32f\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 16-bit unsigned short channel alpha weighted image added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAddWeighted\_32f\_C1IMR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pMask** – Mask-Image Pointer.
- ▶ **nMaskStep** – Mask-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_32f\_C1IMR**(const *Npp32f* \*pSrc, int nSrcStep, const *Npp8u* \*pMask, int nMaskStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 32-bit floating point channel alpha weighted image added to in place floating point destination image using filter mask (updates destination when mask is non-zero).

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pMask** – *Mask-Image Pointer.*
- ▶ **nMaskStep** – *Mask-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel alpha weighted image added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAddWeighted\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *Npp32f* nAlpha)

One 32-bit floating point channel alpha weighted image added to in place floating point destination image.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*

- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nAlpha** – Alpha weight to be applied to source image pixels (0.0F to 1.0F)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.12 Mul

Pixel by pixel multiply of two images.

#### Functions

*NppStatus* **nppiMul\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C1IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C1IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C3IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_AC4IRSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_8u\_C4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_8u\_C4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*

- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C1IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16u\_C3IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image multiplication, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_AC4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16u\_C4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C1IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C3IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image multiplication, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image multiplication, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_AC4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16s\_C4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_C1IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16sc\_C3RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16sc\_C3IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16sc\_C3IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_AC4RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image multiplication, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_AC4RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image multiplication, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_AC4IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16sc\_AC4IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C1RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

1 channel 32-bit image multiplication. Multiply corresponding pixels in ROI.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

1 channel 32-bit image multiplication. Multiply corresponding pixels in ROI.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32s\_C1IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32s\_C3IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*

- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C1IRSfs\_Ctx**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C1IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C3RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C3RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C3IRSfs\_Ctx**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_C3IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_AC4RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_AC4RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiplication, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32sc\_AC4IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiplication, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image multiplication.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image multiplication.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_16f\_C1IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image multiplication.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C1IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_16f\_C3IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C3IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C4IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_16f\_C4IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMu1\_32f\_C3IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_C3IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image multiplication.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image multiplication.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image multiplication.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_AC4IR\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_AC4IR**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32f\_C4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image multiplication.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_C4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32f\_C4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C1IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C1IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C3IR\_Ctx**( const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_C3IR**( const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_AC4R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMul\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_AC4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_AC4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image multiplication.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_C4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMul\_32fc\_C4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image multiplication.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.13 MulScale

Pixel by pixel multiplies each pixel of two images then scales the result by the maximum value for the data bit width.

#### Functions

*NppStatus* **nppiMulScale\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C1IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C3R**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C3IR\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C3IR**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel with unmodified alpha image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_AC4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_AC4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel with unmodified alpha in place image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_8u\_C4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_8u\_C4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiMulScale\_16u\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C3IR\_Ctx**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C3IR**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_AC4R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel with unmodified alpha image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_AC4IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_AC4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel with unmodified alpha in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiMulScale\_16u\_C4IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

Four 16-bit unsigned short channel in place image multiplication then scale by maximum value for pixel bit width.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.14 Sub

Pixel by pixel subtraction of two images.

### Functions

*NppStatus* **nppiSub\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image subtraction, scale by  $2^{\langle nScaleFactor \rangle}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C1RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C3IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_AC4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_8u\_C4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C1RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C3IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_AC4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16u\_C4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image subtraction, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image subtraction, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C1RSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image subtraction, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C3IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_AC4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16s\_C4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C1RSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C1RSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C3RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C3IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_C3IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_AC4RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_AC4RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_AC4IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16sc\_AC4IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image subtraction, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image subtraction. Subtract pSrc1's pixels from corresponding pixels in pSrc2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image subtraction. Subtract pSrc1's pixels from corresponding pixels in pSrc2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image subtraction, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C1IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C3IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C4RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C4RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C4IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32s\_C4IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C1IRSfs\_Ctx**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C1IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C3RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C3RSfs**( const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor )

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C3IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx )

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_C3IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_AC4RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_AC4RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtraction, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_AC4IRSfs\_Ctx**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32sc\_AC4IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtraction, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.

- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image subtraction.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16f\_C1IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image subtraction.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16f\_C1IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image subtraction.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C3IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C3IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_16f\_C4IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_16f\_C4IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C3IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C3IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image subtraction.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image subtraction.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_AC4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image subtraction.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_AC4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32f\_C4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C1IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C1IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSub\_32fc\_C3IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C3IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_AC4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_AC4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_AC4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image subtraction.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSub\_32fc\_C4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image subtraction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.15 Div

Pixel by pixel division of two images.

#### Functions

*NppStatus* **nppiDiv\_8u\_C1RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C1RSfs**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C1IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_8u\_C1IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C3IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_AC4IRSfs\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_8u\_AC4IRSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_8u\_C4RSfs\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_8u\_C4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16u\_C1IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image division, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image division, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C3IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image division, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel with unmodified alpha in place image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_AC4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel with unmodified alpha in place image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16u\_C4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C1IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C1IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C3IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel with unmodified alpha in place image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_AC4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel with unmodified alpha in place image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16s\_C4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C1RSfs\_Ctx**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C1RSfs**( const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C1IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C1IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C3RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C3RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C3IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_C3IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_AC4RSfs\_Ctx**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_AC4RSfs**(const *Npp16sc* \*pSrc1, int nSrc1Step, const *Npp16sc* \*pSrc2, int nSrc2Step, *Npp16sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_AC4IRSfs\_Ctx**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16sc\_AC4IRSfs**(const *Npp16sc* \*pSrc, int nSrcStep, *Npp16sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short complex number (16-bit real, 16-bit imaginary) channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32s\_C1RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C1RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image division. Divide pixels in pSrc2 by pSrc1's pixels.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Note: This function is to be deprecated in future NPP releases, use the function above with a scale factor of 0 instead.

32-bit image division. Divide pixels in pSrc2 by pSrc1's pixels.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32s\_C1IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32s\_C1IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32s\_C3RSfs\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C3RSfs**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C3IRSfs\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32s\_C3IRSfs**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer channel in place image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32sc\_C1RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*

- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32sc\_C1RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C1IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C1IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C3RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C3RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C3IRSfs\_Ctx**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_C3IRSfs**(const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_AC4RSfs\_Ctx**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_AC4RSfs**(const *Npp32sc* \*pSrc1, int nSrc1Step, const *Npp32sc* \*pSrc2, int nSrc2Step, *Npp32sc* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_AC4IRSfs\_Ctx**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32sc\_AC4IRSfs**( const *Npp32sc* \*pSrc, int nSrcStep, *Npp32sc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 32-bit signed integer complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C1IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C1IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C3R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_16f\_C3IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C3IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C4R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C4IR\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_16f\_C4IR**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C1IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C1IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image division.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C3R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image division.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C3IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image division.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_C3IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha image division.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha image division.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_AC4IR\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel with unmodified alpha in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_AC4IR**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel with unmodified alpha in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32f\_C4R\_Ctx**( const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_C4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image division.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_C4IR\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32f\_C4IR**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image division.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C1R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_C1R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_C1IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_C1IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C3R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C3R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C3IR\_Ctx**( const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_C3IR**( const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_AC4R\_Ctx**( const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image division.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_32fc\_AC4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha image division.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_AC4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_AC4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel with unmodified alpha in place image division.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C4R\_Ctx**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C4R**(const *Npp32fc* \*pSrc1, int nSrc1Step, const *Npp32fc* \*pSrc2, int nSrc2Step, *Npp32fc* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel image division.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C4IR\_Ctx**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_32fc\_C4IR**(const *Npp32fc* \*pSrc, int nSrcStep, *Npp32fc* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point complex number (32-bit real, 32-bit imaginary) channel in place image division.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.16 Div\_Round

Pixel by pixel division of two images using result rounding modes.

#### Functions

*NppStatus* **nppiDiv\_Round\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – *Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C1RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

One 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C1RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

One 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – *Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – *Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C3RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_C3IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_C3IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_AC4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 8-bit unsigned char channel image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_AC4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_AC4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 8-bit unsigned char channel in place image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_C4RSfs**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 8-bit unsigned char channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_8u\_C4IRSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_8u\_C4IRSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 8-bit unsigned char channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C1RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

One 16-bit unsigned short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_C1IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_C1IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

One 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C3RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 16-bit unsigned short channel image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_C3IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_C3IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 16-bit unsigned short channel in place image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image division with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_AC4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit unsigned short channel image division with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_AC4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image division with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_AC4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit unsigned short channel in place image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image division, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C4RSfs**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit unsigned short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C4IRSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16u\_C4IRSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit unsigned short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C1RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

One 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiDiv_Round_16s_C1IRSfs_Ctx(const Npp16s *pSrc, int nSrcStep, Npp16s
                                         *pSrcDst, int nSrcDstStep, NppiSize oSizeROI,
                                         NppRoundMode rndMode, int nScaleFactor,
                                         NppStreamContext nppStreamCtx)
```

One 16-bit signed short channel in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

```
NppStatus nppiDiv_Round_16s_C1IRSfs(const Npp16s *pSrc, int nSrcStep, Npp16s *pSrcDst, int
                                     nSrcDstStep, NppiSize oSizeROI, NppRoundMode
                                     rndMode, int nScaleFactor)
```

One 16-bit signed short channel in place image division, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C3RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16s\_C3IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16s\_C3IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Three 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image division with unmodified alpha, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16s\_AC4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit signed short channel image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL)
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiDiv\_Round\_16s\_AC4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image division with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_AC4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit signed short channel in place image division with unmodified alpha, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C4RSfs\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image division, scale by  $2^{\lfloor -nScaleFactor \rfloor}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C4RSfs**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit signed short channel image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – *Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C4IRSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **rndMode** – *Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiDiv\_Round\_16s\_C4IRSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppRoundMode* rndMode, int nScaleFactor)

Four 16-bit signed short channel in place image division, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **rndMode** – Result Rounding mode to be used (NPP\_RND\_ZERO, NPP\_RND\_NEAR, or NP\_RND\_FINANCIAL).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

**1.6.1.17 Abs**

Absolute value of each pixel value in an image.

**Functions**

*NppStatus* **nppiAbs\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAbs\_16s\_C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAbs\_16s\_C1IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C1IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C3R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C3R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C3IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C3IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_AC4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_AC4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_AC4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel in place image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16s\_C4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C1R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C1IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_16f\_C1IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_16f\_C3R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_16f\_C3IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C3IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C4R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_16f\_C4IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_16f\_C4IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C1IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image absolute value with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image absolute value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbs\_32f\_C4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbs\_32f\_C4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image absolute value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

### 1.6.1.18 AbsDiff

Pixel by pixel absolute difference between two images.

#### Functions

*NppStatus* **nppiAbsDiff\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAbsDiff\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channels absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channels absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channels absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channels absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_16f\_C1R**(const *Npp16f* \*pSrc1, int nSrc1Step, const *Npp16f* \*pSrc2, int nSrc2Step, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAbsDiff\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel absolute difference of image1 minus image2.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.19 Sqr

Square each pixel in an image.

## Functions

*NppStatus* **nppiSqr\_8u\_C1RSfs\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C1RSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C1IRSfs\_Ctx**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C1IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C3RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C3IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_C3IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image squared with unmodified alpha, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_8u\_AC4RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image squared with unmodified alpha, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_AC4IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image squared with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_AC4IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image squared with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_C4RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image squared, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_C4RSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_C4IRSfs\_Ctx**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_8u\_C4IRSfs**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C1RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C1RSfs\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C1IRSfs**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image squared, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image squared, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C3RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image squared, scale by  $2^{\ell - nScaleFactor}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C3IRSfs\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_C3IRSfs**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel in place image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_AC4RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image squared with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16u\_AC4RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image squared with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_AC4IRSfs\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image squared with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_AC4IRSfs**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image squared with unmodified alpha, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_C4RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image squared, scale by  $2^{(nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_C4RSfs**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel image squared, scale by  $2^{\langle -nScaleFactor \rangle}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_C4IRSfs\_Ctx**( *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image squared, scale by  $2^{\langle -nScaleFactor \rangle}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16u\_C4IRSfs**( *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit unsigned short channel in place image squared, scale by  $2^{\langle -nScaleFactor \rangle}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16s\_C1RSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

One 16-bit signed short channel in place image squared, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16s\_C1IRSfs**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16s\_C3RSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqr\_16s\_C4IRSfs**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image squared, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C1R\_Ctx**( const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

One 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C1R**( const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

One 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C1IR\_Ctx**( *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

One 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C1IR**( *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

One 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C3R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C3IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C3IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C4R\_Ctx**( const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C4R**( const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 16-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C4IR\_Ctx**( *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_16f\_C4IR**( *Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Four 16-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C1R\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

One 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C1R**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

One 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C1IR\_Ctx**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

One 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C1IR**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

One 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C3R\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C3R**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Three 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C3IR\_Ctx**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C3IR**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Three 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image squared with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image squared with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image squared with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image squared with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C4R\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C4R**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 32-bit floating point channel image squared.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C4IR\_Ctx**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqr\_32f\_C4IR**( *Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Four 32-bit floating point channel in place image squared.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

### 1.6.1.20 Sqrt

Pixel by pixel square root of each pixel in an image.

#### Functions

*NppStatus* **nppiSqrt\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_8u\_C1RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_8u\_C1IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_C1IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_C3RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_C3IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_C3IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_AC4RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image square root with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_8u\_AC4RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel image square root with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_8u\_AC4IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image square root with unmodified alpha, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_8u\_AC4IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 8-bit unsigned char channel in place image square root with unmodified alpha, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16u\_C1RSfs**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16u\_C1RSfs\_Ctx**( *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16u\_C1RSfs**( *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_C1RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_C1RSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel image square root, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16s\_C1IRSfs\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image square root, scale by  $2^{\text{scaleFactor}}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16s\_C1IRSfs**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit signed short channel in place image square root, scale by  $2^{\text{scaleFactor}}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16s\_C3RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image square root, scale by  $2^{\text{scaleFactor}}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_C3RSfs**( const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_C3IRSfs\_Ctx**( *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_C3IRSfs**( *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit signed short channel in place image square root, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nScaleFactor** – *Integer Result Scaling*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_AC4RSfs\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image square root with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_AC4RSfs**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel image square root with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_AC4IRSfs\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image square root with unmodified alpha, scale by  $2^{( - nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16s\_AC4IRSfs**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Four 16-bit signed short channel in place image square root with unmodified alpha, scale by  $2^k$  ( $nScaleFactor$ ), then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16f\_C1R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiSqrt\_16f\_C1IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C1IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C3R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C3IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C3IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C4R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C4IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_16f\_C4IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C1IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image square root with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image square root with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image square root with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image square root with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel image square root.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiSqrt\_32f\_C4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit floating point channel in place image square root.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.1.21 Ln

Pixel by pixel natural logarithm of each pixel in an image.

### Functions

*NppStatus* **nppiLn\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_8u\_C1RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_8u\_C1IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_8u\_C1IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_8u\_C3RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nScaleFactor** – *Integer Result Scaling.*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_8u\_C3RSfs**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_8u\_C3IRSfs\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_8u\_C3IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C1RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C1RSfs\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C1RSfs**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C3RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_16u\_C3RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 16-bit unsigned short channel image natural logarithm, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

One 32-bit floating point channel image natural logarithm.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel image natural logarithm.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel in place image natural logarithm.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_32f\_C1IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit floating point channel in place image natural logarithm.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel image natural logarithm.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLn\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image natural logarithm.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image natural logarithm.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLn\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image natural logarithm.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

### 1.6.1.22 Exp

Exponential value of each pixel in an image.

### Functions

*NppStatus* **nppiExp\_8u\_C1RSfs\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C1RSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel image exponential, scale by  $2^{\text{nScaleFactor}}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C1RSfs\_Ctx**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image exponential, scale by  $2^{\text{nScaleFactor}}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C1RSfs**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 8-bit unsigned char channel in place image exponential, scale by  $2^{\text{nScaleFactor}}$ , then clamp to saturated value.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C3RSfs\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C3RSfs**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C3IRSfs\_Ctx**( *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_8u\_C3IRSfs**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

Three 8-bit unsigned char channel in place image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_16u\_C1RSfs\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_16u\_C1RSfs**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiExp\_16u\_C1IRSfs\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiExp\_16u\_C1IRSfs**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, int nScaleFactor)

One 16-bit unsigned short channel in place image exponential, scale by  $2^{(-nScaleFactor)}$ , then clamp to saturated value.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nScaleFactor** – Integer Result Scaling.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

Three 32-bit floating point channel image exponential.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiExp\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel image exponential.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiExp\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit floating point channel in place image exponential.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiExp\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit floating point channel in place image exponential.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

## 1.6.2. Logical Operations

### 1.6.2.1 Logical Operations

The set of image processing logical operations available in the library.

### 1.6.2.2 AndC

Pixel by pixel logical and of an image with a constant.

#### Functions

*NppStatus* **nppiAndC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_C1IR\_Ctx**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical and with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_C1IR**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical and with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical and with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_8u\_C3IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_8u\_C3IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical and with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_AC4IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical and with constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_AC4IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical and with constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI,  
*NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_8u\_C4IR\_Ctx**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_8u\_C4IR**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C1R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical and with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C1R**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical and with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C1IR\_Ctx**( const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical and with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C1IR**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical and with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C3IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C3IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical and with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical and with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical and with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_AC4IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_AC4IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_16u\_C4IR\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_16u\_C4IR**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – *Constant*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_C1IR\_Ctx**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical and with constant.

**Parameters**

- ▶ **nConstant** – *Constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_C1IR**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical and with constant.

**Parameters**

- ▶ **nConstant** – *Constant*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3],  
*Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical and with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_32s\_C3IR\_Ctx**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int  
nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext*  
nppStreamCtx)

Three 32-bit signed integer channel in place image logical and with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAndC\_32s\_C3IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical and with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_AC4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit signed integer channel image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_AC4R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 32-bit signed integer channel image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_AC4IR\_Ctx**( const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit signed integer channel in place image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_AC4IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical and with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_32s\_C4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical and with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiAndC\_32s\_C4IR\_Ctx**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAndC\_32s\_C4IR**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical and with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.3 OrC

Pixel by pixel logical or of an image with a constant.

#### Functions

*NppStatus* **nppiOrC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_8u\_C1IR\_Ctx**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

One 8-bit unsigned char channel in place image logical or with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_8u\_C1IR**( const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

One 8-bit unsigned char channel in place image logical or with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_8u\_C3R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 8-bit unsigned char channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C3IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C3IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI,  
*NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical or with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_AC4IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical or with constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_AC4IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical or with constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C4IR\_Ctx**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_8u\_C4IR**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C1R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C1R**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C1IR\_Ctx**( const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical or with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C1IR**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C3IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C3IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical or with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical or with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_AC4IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_AC4IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_16u\_C4IR\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_16u\_C4IR**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOrC\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C1IR\_Ctx**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical or with constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C1IR**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical or with constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C3IR\_Ctx**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C3IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_AC4IR\_Ctx**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_AC4IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical or with constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C4IR\_Ctx**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOrC\_32s\_C4IR**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.4 XorC

Pixel by pixel logical exclusive or of an image with a constant.

#### Functions

*NppStatus* **nppiXorC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_8u\_C1IR\_Ctx**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_8u\_C1IR**(const *Npp8u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C3IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C3IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_AC4IR\_Ctx**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_AC4IR**(const *Npp8u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* aConstants[4],  
*Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C4IR\_Ctx**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_8u\_C4IR**(const *Npp8u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep,  
*NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C1IR\_Ctx**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C1IR**(const *Npp16u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C3IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C3IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **aConstants** – *fixed size array of constant values, one per channel.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical exclusive or with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical exclusive or with constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – *fixed size array of constant values, one per channel.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_AC4IR\_Ctx**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_AC4IR**(const *Npp16u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C4IR\_Ctx**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_16u\_C4IR**(const *Npp16u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_32s\_C1R\_Ctx**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_32s\_C1IR**(const *Npp32s* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXorC\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical exclusive or with constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C3IR\_Ctx**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C3IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical exclusive or with constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_AC4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit signed integer channel image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_AC4R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 32-bit signed integer channel image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_AC4IR\_Ctx**( const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 32-bit signed integer channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.

- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_AC4IR**(const *Npp32s* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical exclusive or with constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical exclusive or with constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C4IR\_Ctx**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXorC\_32s\_C4IR**(const *Npp32s* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical exclusive or with constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.5 RShiftC

Pixel by pixel right shift of an image by a constant value.

### Functions

*NppStatus* **nppiRShiftC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C1IR**(const *Npp32u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C3IR**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_AC4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 8-bit unsigned char channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_AC4R**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Four 8-bit unsigned char channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_AC4IR\_Ctx**( const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Four 8-bit unsigned char channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_AC4IR**( const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Four 8-bit unsigned char channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8u\_C4IR**(const *Npp32u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C1R\_Ctx**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit signed char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C1R**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit signed char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit signed char channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C1IR**(const *Npp32u* nConstant, *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit signed char channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C3R\_Ctx**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit signed char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C3R**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit signed char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit signed char channel in place image right shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C3IR**(const *Npp32u* aConstants[3], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit signed char channel in place image right shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_AC4R\_Ctx**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit signed char channel image right shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_AC4R**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit signed char channel image right shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_8s\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit signed char channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_8s\_AC4IR**(const *Npp32u* aConstants[3], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit signed char channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_8s\_C4R\_Ctx**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit signed char channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C4R**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit signed char channel image right shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit signed char channel in place image right shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_8s\_C4IR**(const *Npp32u* aConstants[4], *Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit signed char channel in place image right shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image right shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16u\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16u\_C1IR**(const *Npp32u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16u\_C3R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 16-bit unsigned short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C3R**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI )

Three 16-bit unsigned short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C3IR\_Ctx**( const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx )

Three 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C3IR**( const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI )

Three 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_AC4IR**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16u\_C4IR**(const *Npp32u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C1R**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit signed short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel in place image right shift by constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_C1IR**(const *Npp32u* nConstant, *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit signed short channel in place image right shift by constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_C3R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel image right shift by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_C3R**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit signed short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit signed short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C3IR**(const *Npp32u* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit signed short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_AC4R**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel image right shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image right shift by constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_AC4IR**(const *Npp32u* aConstants[3], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel in place image right shift by constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_16s\_C4R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C4R**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit signed short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_16s\_C4IR**(const *Npp32u* aConstants[4], *Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit signed short channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image right shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image right shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image right shift by constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C1IR**(const *Npp32u* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image right shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C3IR**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_32s\_AC4IR\_Ctx**( const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_32s\_AC4IR**( const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image right shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_32s\_C4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiRShiftC\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image right shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiRShiftC\_32s\_C4IR**(const *Npp32u* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image right shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.6 LShiftC

Pixel by pixel left shift of an image by a constant value.

#### Functions

*NppStatus* **nppiLShiftC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image left shift by constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C1IR**(const *Npp32u* nConstant, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image left shift by constant.

#### Parameters

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C3IR**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_AC4IR**(const *Npp32u* aConstants[3], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_8u\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_8u\_C4IR**(const *Npp32u* aConstants[4], *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nConstant** – Constant
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_C1IR**(const *Npp32u* nConstant, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **nConstant** – *Constant.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_16u\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_16u\_C3IR**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiLShiftC\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_AC4IR**(const *Npp32u* aConstants[3], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiLShiftC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiLShiftC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*.

*NppStatus* **nppiLShiftC\_16u\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_16u\_C4IR**(const *Npp32u* aConstants[4], *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image left shift by constant.

**Parameters**

- ▶ **aConstants** – *fixed size array of constant values, one per channel.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* nConstant, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nConstant** – *Constant.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C1IR\_Ctx**(const *Npp32u* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image left shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C1IR**(const *Npp32u* nConstant, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image left shift by constant.

**Parameters**

- ▶ **nConstant** – Constant.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C3IR\_Ctx**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image left shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C3IR**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image left shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image left shift by constant with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[3], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_AC4IR\_Ctx**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_AC4IR**(const *Npp32u* aConstants[3], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image left shift by constant with unmodified alpha.

**Parameters**

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image left shift by constant.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32u* aConstants[4], *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image left shift by constant.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C4IR\_Ctx**(const *Npp32u* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image left shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiLShiftC\_32s\_C4IR**(const *Npp32u* aConstants[4], *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image left shift by constant.

#### Parameters

- ▶ **aConstants** – fixed size array of constant values, one per channel.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.7 And

Pixel by pixel logical and of images.

#### Functions

*NppStatus* **nppiAnd\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical and.

##### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical and.

##### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C1IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical and.

##### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical and.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical and.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical and.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C3IR\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C3IR**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_AC4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_AC4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_AC4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_8u\_C4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical and.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical and.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical and.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C3IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical and.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C3IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical and.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical and with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_16u\_AC4IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_16u\_AC4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_16u\_C4R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical and.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C4R**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical and.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C4IR\_Ctx**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical and.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_16u\_C4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_32s\_C1IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C1IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C3IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C3IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_AC4IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_AC4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical and with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C4R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical and.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAnd\_32s\_C4IR\_Ctx**( const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical and.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAnd\_32s\_C4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical and.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.8 Or

Pixel by pixel logical or of images.

#### Functions

*NppStatus* **nppiOr\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical or.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C1IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C3IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C3IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_AC4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_8u\_AC4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical or with unmodified alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical or.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical or.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_8u\_C4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_16u\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_16u\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C3IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C3IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical or with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical or with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_AC4IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical or with unmodified alpha.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_AC4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C4IR\_Ctx**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_16u\_C4IR**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_C1R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical or.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C1IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C1IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C3R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C3R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C3IR\_Ctx**( const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image logical or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_C3IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiOr\_32s\_AC4IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_AC4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_C4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_C4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_C4IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiOr\_32s\_C4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

### 1.6.2.9 Xor

Pixel by pixel logical exclusive or of images.

#### Functions

*NppStatus* **nppiXor\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C1IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical exclusive or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_C1IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C3IR\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical exclusive or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C3IR**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical exclusive or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_AC4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical exclusive or with unmodified alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_AC4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_AC4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C4IR\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_8u\_C4IR**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C1IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C1IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image logical exclusive or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C3IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C3IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_16u\_AC4IR\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_16u\_AC4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_16u\_C4R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C4R**( const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C4IR\_Ctx**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_16u\_C4IR**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_32s\_C1R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_32s\_C1R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_32s\_C1IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C1IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 32-bit signed integer channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C3R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C3R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel image logical exclusive or.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C3IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 32-bit signed integer channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C3IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 32-bit signed integer channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_AC4R\_Ctx**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_AC4IR\_Ctx**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_AC4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical exclusive or with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C4R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel image logical exclusive or.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiXor\_32s\_C4IR\_Ctx**( const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel in place image logical exclusive or.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiXor\_32s\_C4IR**(const *Npp32s* \*pSrc, int nSrcStep, *Npp32s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 32-bit signed integer channel in place image logical exclusive or.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.2.10 Not

Pixel by pixel logical not of image.

### Functions

*NppStatus* **nppiNot\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C1IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C1IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical not with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiNot\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical not with unmodified alpha.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical not with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical not with unmodified alpha.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_C4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image logical not.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_C4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiNot\_8u\_C4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image logical not.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

## 1.6.3. Image Alpha Composition Operations

### 1.6.3.1 AlphaCompC

Composite two images using constant alpha values.

#### Functions

*NppStatus* **nppiAlphaCompC\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image composition using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **nAlpha2** – *Image alpha opacity (0 - max channel pixel value).*

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_C1R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp )

One 8-bit unsigned char channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_C3R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx )

Three 8-bit unsigned char channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_C3R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Three 8-bit unsigned char channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_C4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_C4R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 8-bit unsigned char channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_AC4R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image composition with alpha using constant source alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_8u\_AC4R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 8-bit unsigned char channel image composition with alpha using constant source alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaCompC\_8s\_C1R\_Ctx**( const *Npp8s* \*pSrc1, int nSrc1Step, *Npp8s* nAlpha1, const *Npp8s* \*pSrc2, int nSrc2Step, *Npp8s* nAlpha2, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx )

One 8-bit signed char channel image composition using constant alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaCompC\_8s\_C1R**( const *Npp8s* \*pSrc1, int nSrc1Step, *Npp8s* nAlpha1, const *Npp8s* \*pSrc2, int nSrc2Step, *Npp8s* nAlpha2, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp )

One 8-bit signed char channel image composition using constant alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C1R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C1R**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.

- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Three 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 16-bit unsigned short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_AC4R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image composition with alpha using constant source alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16u\_AC4R**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* nAlpha2, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 16-bit unsigned short channel image composition with alpha using constant source alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, *Npp16s* nAlpha1, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* nAlpha2, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_16s\_C1R**(const *Npp16s* \*pSrc1, int nSrc1Step, *Npp16s* nAlpha1, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* nAlpha2, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 16-bit signed short channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32u\_C1R\_Ctx**( const *Npp32u* \*pSrc1, int nSrc1Step, *Npp32u* nAlpha1, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* nAlpha2, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit unsigned integer channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32u\_C1R**( const *Npp32u* \*pSrc1, int nSrc1Step, *Npp32u* nAlpha1, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* nAlpha2, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit unsigned integer channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32s\_C1R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, *Npp32s* nAlpha1, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* nAlpha2, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32s\_C1R**( const *Npp32s* \*pSrc1, int nSrc1Step, *Npp32s* nAlpha1, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* nAlpha2, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit signed integer channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, *Npp32f* nAlpha1, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* nAlpha2, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0.0 - 1.0).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0.0 - 1.0).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaCompC\_32f\_C1R**(const *Npp32f* \*pSrc1, int nSrc1Step, *Npp32f* nAlpha1, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* nAlpha2, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit floating point channel image composition using constant alpha.

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0.0 - 1.0).
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **nAlpha2** – Image alpha opacity (0.0 - 1.0).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

Premultiplies pixels of an image using a constant alpha value.

## Functions

*NppStatus* **nppiAlphaPremulC\_8u\_C1R\_Ctx**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image premultiplication using constant alpha.

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C1R**( const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel image premultiplication using constant alpha.

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C1IR\_Ctx**( *Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel in place image premultiplication using constant alpha.

### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C1IR**(*Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 8-bit unsigned char channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C3IR\_Ctx**(*Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 8-bit unsigned char channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_8u\_C3IR**(*Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 8-bit unsigned char channel in place image premultiplication using constant alpha.

#### Parameters

- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image premultiplication using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image premultiplication using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C4IR\_Ctx**(*Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_C4IR**(*Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image premultiplication with alpha using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image premultiplication with alpha using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_AC4IR\_Ctx**( *Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image premultiplication with alpha using constant alpha.

#### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_8u\_AC4IR**( *Npp8u* nAlpha1, *Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image premultiplication with alpha using constant alpha.

#### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_16u\_C1R\_Ctx**( const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image premultiplication using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_16u\_C1R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_16u\_C1IR\_Ctx**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_16u\_C1IR**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

One 16-bit unsigned short channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value).*
- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremulC\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C3R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel image premultiplication using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C3IR\_Ctx**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Three 16-bit unsigned short channel in place image premultiplication using constant alpha.

#### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C3IR**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Three 16-bit unsigned short channel in place image premultiplication using constant alpha.

#### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C4R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image premultiplication using constant alpha.

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C4IR\_Ctx**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_C4IR**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image premultiplication using constant alpha.

**Parameters**

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image premultiplication with alpha using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* nAlpha1, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image premultiplication with alpha using constant alpha.

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_AC4IR\_Ctx**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image premultiplication with alpha using constant alpha.

#### Parameters

- ▶ **nAlpha1** – Image alpha opacity (0 - max channel pixel value).
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremu1C\_16u\_AC4IR**(*Npp16u* nAlpha1, *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image premultiplication with alpha using constant alpha.

**Parameters**

- ▶ **nAlpha1** – *Image alpha opacity (0 - max channel pixel value)*.
- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

### 1.6.3.2 AlphaComp

Composite two images using alpha opacity values contained in each image.

#### Functions

*NppStatus* **nppiAlphaComp\_8u\_AC1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 8-bit unsigned char channel image composition using image alpha values (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer*.
- ▶ **nSrc1Step** – *Source-Image Line Step*.
- ▶ **pSrc2** – *Source-Image Pointer*.
- ▶ **nSrc2Step** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **eAlphaOp** – *alpha-blending operation*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_8u\_AC1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 8-bit unsigned char channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 8-bit unsigned char channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.

- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaComp\_8s\_AC1R\_Ctx**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp8s* \*pSrc2, int nSrc2Step, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 8-bit signed char channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaComp\_8s\_AC1R**(const *Npp8s* \*pSrc1, int nSrc1Step, const *Npp8s* \*pSrc2, int nSrc2Step, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 8-bit signed char channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaComp\_16u\_AC1R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 16-bit unsigned short channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_16u\_AC1R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 16-bit unsigned short channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.

- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, const *Npp16u* \*pSrc2, int nSrc2Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 16-bit unsigned short channel image composition using image alpha values (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_16s\_AC1R\_Ctx**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 16-bit signed short channel image composition using image alpha values (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_16s\_AC1R**(const *Npp16s* \*pSrc1, int nSrc1Step, const *Npp16s* \*pSrc2, int nSrc2Step, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 16-bit signed short channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32u\_AC1R\_Ctx**(const *Npp32u* \*pSrc1, int nSrc1Step, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit unsigned integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32u\_AC1R**(const *Npp32u* \*pSrc1, int nSrc1Step, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit unsigned integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaComp\_32u\_AC4R\_Ctx**( const *Npp32u* \*pSrc1, int nSrc1Step, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 32-bit unsigned integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaComp\_32u\_AC4R**( const *Npp32u* \*pSrc1, int nSrc1Step, const *Npp32u* \*pSrc2, int nSrc2Step, *Npp32u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 32-bit unsigned integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32s\_AC1R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit signed integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32s\_AC1R**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit signed integer channel image composition using image alpha values (0 - max channel pixel value).

#### Parameters

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pSrc2** – *Source-Image Pointer.*
- ▶ **nSrc2Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32s\_AC4R\_Ctx**( const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 32-bit signed integer channel image composition using image alpha values (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32s\_AC4R**(const *Npp32s* \*pSrc1, int nSrc1Step, const *Npp32s* \*pSrc2, int nSrc2Step, *Npp32s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 32-bit signed integer channel image composition using image alpha values (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32f\_AC1R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

One 32-bit floating point channel image composition using image alpha values (0.0 - 1.0).

**Parameters**

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.

- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32f\_AC1R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

One 32-bit floating point channel image composition using image alpha values (0.0 - 1.0).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp, *NppStreamContext* nppStreamCtx)

Four 32-bit floating point channel image composition using image alpha values (0.0 - 1.0).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaComp\_32f\_AC4R**(const *Npp32f* \*pSrc1, int nSrc1Step, const *Npp32f* \*pSrc2, int nSrc2Step, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiAlphaOp* eAlphaOp)

Four 32-bit floating point channel image composition using image alpha values (0.0 - 1.0).

#### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pSrc2** – Source-Image Pointer.
- ▶ **nSrc2Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eAlphaOp** – alpha-blending operation.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

Premultiplies image pixels by image alpha opacity values.

## Functions

*NppStatus* **nppiAlphaPremul\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel image premultiplication with pixel alpha (0 - max channel pixel value).

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaPremul\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel image premultiplication with pixel alpha (0 - max channel pixel value).

### Parameters

- ▶ **pSrc1** – Source-Image Pointer.
- ▶ **nSrc1Step** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaPremul\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 8-bit unsigned char channel in place image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremul\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 8-bit unsigned char channel in place image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremul\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes.*

*NppStatus* **nppiAlphaPremul\_16u\_AC4R**(const *Npp16u* \*pSrc1, int nSrc1Step, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrc1** – *Source-Image Pointer.*
- ▶ **nSrc1Step** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaPremul\_16u\_AC4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

Four 16-bit unsigned short channel in place image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

*NppStatus* **nppiAlphaPremul\_16u\_AC4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

Four 16-bit unsigned short channel in place image premultiplication with pixel alpha (0 - max channel pixel value).

**Parameters**

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes.

## 1.7. Image Color Conversion Functions

Routines manipulating an image's color model and sampling format.

These functions can be found in the nppicc library. Linking to only the sub-libraries that you use can significantly save link time, application load time, and CUDA runtime startup time when using dynamic libraries.

### 1.7.1. Color Processing Functions

Routines for performing image color manipulation.

## RGBToYUVColorTwist

Normally, color twist is a 3-channel operation that takes place on RGB data.

The following functions also perform the color twist operation, but while converting between image formats: RGBToYUV420, RGBToYUV422, and RGBToNV12.

To recap color twist pixel processing: Color twist consists of applying the following formula to each image pixel using coefficients from the user supplied color twist host matrix array as follows where  $dst[x]$  and  $src[x]$  represent destination pixel and source pixel channel or plane  $x$ . The full sized coefficient matrix should be sent for all pixel channel sizes, the function will process the appropriate coefficients and channels for the corresponding pixel size.

This is how the matrix works for a RGB->YUV420/YUV422/NV12 forward transform:

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3]
```

```
NppStatus nppiRGBToYUV420_8u_ColorTwist32f_P3R_Ctx(const Npp8u *const pSrc[3], int
aSrcStep[3], Npp8u *pDst[3], int
aDstStep[3], NppiSize oSizeROI,
const Npp32f aTwist[3][4],
NppStreamContext nppStreamCtx)
```

Three channel 8-bit unsigned planar RGB conversion to three channel 8-bit unsigned planar YUV 4:2:0, using a Color Twist to compute the exact color space arithmetic.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiRGBToYUV420_16u_ColorTwist32f_P3R_Ctx(const Npp16u *const pSrc[3], int
aSrcStep[3], Npp16u *pDst[3], int
aDstStep[3], NppiSize oSizeROI,
const Npp32f aTwist[3][4],
NppStreamContext nppStreamCtx)
```

Three channel 16-bit unsigned planar RGB conversion to three channel 16-bit unsigned planar YUV 4:2:0, using a Color Twist to compute the exact color space arithmetic.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiRGBToYUV420_8u_ColorTwist32f_C3P3R_Ctx(const Npp8u *pSrc, int nSrcStep,
                                                    Npp8u *pDst[3], int aDstStep[3],
                                                    NppiSize oSizeROI, const Npp32f
                                                    aTwist[3][4], NppStreamContext
                                                    nppStreamCtx)
```

Three channel 8-bit unsigned packed RGB conversion to three channel 8-bit unsigned planar YUV 4:2:0, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiRGBToYUV420_16u_ColorTwist32f_C3P3R_Ctx(const Npp16u *pSrc, int
                                                    nSrcStep, Npp16u *pDst[3], int
                                                    aDstStep[3], NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext
                                                    nppStreamCtx)
```

Three channel 16-bit unsigned packed RGB conversion to three channel 16-bit unsigned planar YUV 4:2:0, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToYUV422\_8u\_ColorTwist32f\_P3R\_Ctx**(const *Npp8u* \*const pSrc[3], int aSrcStep[3], *Npp8u* \*pDst[3], int aDstStep[3], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar RGB conversion to three channel 8-bit unsigned planar YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToYUV422\_16u\_ColorTwist32f\_P3R\_Ctx**(const *Npp16u* \*const pSrc[3], int aSrcStep[3], *Npp16u* \*pDst[3], int aDstStep[3], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned planar RGB conversion to three channel 16-bit unsigned planar YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToYUV422\_8u\_ColorTwist32f\_C3C2R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned packed RGB conversion to two channel 8-bit unsigned packed YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiRGBToYUV422_16u_ColorTwist32f_C3C2R_Ctx(const Npp16u *pSrc, int
                                                       nSrcStep, Npp16u *pDst, int
                                                       nDstStep, NppiSize oSizeROI,
                                                       const Npp32f aTwist[3][4],
                                                       NppStreamContext
                                                       nppStreamCtx)
```

Three channel 16-bit unsigned packed RGB conversion to two channel 16-bit unsigned packed YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiRGBToYUV422_8u_ColorTwist32f_C3P3R_Ctx(const Npp8u *pSrc, int nSrcStep,
                                                       Npp8u *pDst[3], int aDstStep[3],
                                                       NppiSize oSizeROI, const Npp32f
                                                       aTwist[3][4], NppStreamContext
                                                       nppStreamCtx)
```

Three channel 8-bit unsigned packed RGB conversion to three channel 8-bit unsigned planar YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToYUV422\_16u\_ColorTwist32f\_C3P3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst[3], int aDstStep[3], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned packed RGB conversion to three channel 16-bit unsigned planar YUV 4:2:2, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToNV12\_8u\_ColorTwist32f\_C3P2R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst[2], int aDstStep[2], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned packed RGB conversion to two channel 8-bit unsigned planar NV12, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToNV12\_16u\_ColorTwist32f\_C3P2R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst[2], int aDstStep[2], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned packed RGB conversion to two channel 16-bit unsigned planar NV12, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiRGBToNV12_8u_ColorTwist32f_P3P2R_Ctx(const Npp8u *const pSrc[3], int
                                                    aSrcStep[3], Npp8u *pDst[2], int
                                                    aDstStep[2], NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Three channel 8-bit unsigned planar RGB conversion to two channel 8-bit unsigned planar NV12, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiRGBToNV12_16u_ColorTwist32f_P3P2R_Ctx(const Npp16u *const pSrc[3], int
                                                    aSrcStep[3], Npp16u *pDst[2], int
                                                    aDstStep[2], NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Three channel 16-bit unsigned planar RGB conversion to two channel 16-bit unsigned planar NV12, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

## YUVToRGBColorTwist

This is the inverse color twist, a 3-channel operation that takes place on YUV/NV12 data to produce RGB data, supporting the following conversions: YUV420ToRGB, YUV422ToRGB, and NV12ToRGB.

The INVERSE Color twist consists of applying the following formula to each image pixel using coefficients from the user supplied color twist host matrix array as follows where `dst[x]` and `src[x]` represent destination pixel and source pixel channel or plane x. The full sized coefficient matrix should be sent for all pixel channel sizes, the function will process the appropriate coefficients and channels for the corresponding pixel size.

This is how the matrix works for the YUV420/YUV/422/NV12->RGB INVERSE transform:

(note- do the offsets first):

```
src[0]' = src[0] + aTwist[0][3]
src[1]' = src[1] + aTwist[1][3]
src[2]' = src[2] + aTwist[2][3]
```

And then the remaining 3x3 twist matrix is applied using those modified values:

```
dst[0] = aTwist[0][0] * src[0]' + aTwist[0][1] * src[1]' + aTwist[0][2] * src[2]'
dst[1] = aTwist[1][0] * src[0]' + aTwist[1][1] * src[1]' + aTwist[1][2] * src[2]'
dst[2] = aTwist[2][0] * src[0]' + aTwist[2][1] * src[1]' + aTwist[2][2] * src[2]'
```

Since the 4th column of the matrix is the offsets (either 0 or half-max to shift the values to be positive), as they're applied last in the forward transform (to YUV), they need to be applied FIRST in the inverse transform (back to RGB). This does mean that +-16384 has to be used for 16u images where there was a +-128 for 8u images in both forward and inverse cases.

```
NppStatus nppiYUV420ToRGB_8u_ColorTwist32f_P3R_Ctx(const Npp8u *const pSrc[3], int
                                                    aSrcStep[3], Npp8u *pDst[3], int
                                                    aDstStep[3], NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Three channel 8-bit unsigned planar YUV4:2:0 conversion to three channel 8-bit unsigned planar RGB, using a Color Twist to compute the exact color space arithmetic.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiYUV420ToRGB_16u_ColorTwist32f_P3R_Ctx(const Npp16u *const pSrc[3], int
                                                    aSrcStep[3], Npp16u *pDst[3], int
                                                    aDstStep[3], NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Three channel 16-bit unsigned planar YUV4:2:0 conversion to three channel 16-bit unsigned planar RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiYUV420ToRGB_8u_ColorTwist32f_P3C3R_Ctx(const Npp8u *const pSrc[3], int
                                                    aSrcStep[3], Npp8u *pDst, int
                                                    nDstStep, NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext
                                                    nppStreamCtx)
```

Three channel 8-bit unsigned planar YUV4:2:0 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiYUV420ToRGB_16u_ColorTwist32f_P3C3R_Ctx(const Npp16u *const pSrc[3], int
                                                    aSrcStep[3], Npp16u *pDst, int
                                                    nDstStep, NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext
                                                    nppStreamCtx)
```

Three channel 16-bit unsigned planar YUV4:2:0 conversion to three channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiYUV420ToRGB_8u_ColorTwist32f_P3C4R_Ctx(const Npp8u *const pSrc[3], int
                                                    aSrcStep[3], Npp8u *pDst, int
                                                    nDstStep, NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext
                                                    nppStreamCtx)
```

Three channel 8-bit unsigned planar YUV4:2:0 conversion to four channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with constant alpha (0xFF).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiYUV420ToRGB_16u_ColorTwist32f_P3C4R_Ctx(const Npp16u *const pSrc[3], int
                                                    aSrcStep[3], Npp16u *pDst, int
                                                    nDstStep, NppiSize oSizeROI,
                                                    const Npp32f aTwist[3][4],
                                                    NppStreamContext
                                                    nppStreamCtx)
```

Three channel 16-bit unsigned planar YUV4:2:0 conversion to four channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with constant alpha (0xFFFF).

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV420ToRGB\_8u\_ColorTwist32f\_P3AC4R\_Ctx**(const *Npp8u* \*const pSrc[3], int aSrcStep[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], const *Npp8u* nAlpha, *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar YUV4:2:0 conversion to four channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with user set alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **aSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nAlpha** – 8-bit unsigned alpha constant.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV420ToRGB\_16u\_ColorTwist32f\_P3AC4R\_Ctx**(const *Npp16u* \*const pSrc[3], int aSrcStep[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], const *Npp16u* nAlpha, *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned planar YUV4:2:0 conversion to four channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with user set alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **aSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nAlpha** – 16-bit unsigned alpha constant.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_8u\_ColorTwist32f\_C2C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Two channel 8-bit unsigned packed YUV4:2:2 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_16u\_ColorTwist32f\_C2C3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Two channel 16-bit unsigned packed YUV4:2:2 conversion to three channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_8u\_ColorTwist32f\_P3R\_Ctx**(const *Npp8u* \*const pSrc[3], int aSrcStep[3], *Npp8u* \*pDst[3], int aDstStep[3], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar YUV4:2:2 conversion to three channel 8-bit unsigned planar RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_16u\_ColorTwist32f\_P3R\_Ctx**( const *Npp16u* \*const pSrc[3], int aSrcStep[3], *Npp16u* \*pDst[3], int aDstStep[3], *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned planar YUV4:2:2 conversion to three channel 16-bit unsigned planar RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **aDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_8u\_ColorTwist32f\_P3C3R\_Ctx**( const *Npp8u* \*const pSrc[3], int aSrcStep[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar YUV4:2:2 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_16u\_ColorTwist32f\_P3C3R\_Ctx**(const *Npp16u* \*const pSrc[3], int aSrcStep[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar YUV4:2:2 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_8u\_ColorTwist32f\_P3AC4R\_Ctx**(const *Npp8u* \*const pSrc[3], int aSrcStep[3], *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], const *Npp8u* nAlpha, *NppStreamContext* nppStreamCtx)

Three channel 8-bit unsigned planar YUV4:2:2 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with user set alpha.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **aSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nAlpha** – 8-bit unsigned alpha constant.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiYUV422ToRGB\_16u\_ColorTwist32f\_P3AC4R\_Ctx**(const *Npp16u* \*const pSrc[3], int aSrcStep[3], *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], const *Npp16u* nAlpha, *NppStreamContext* nppStreamCtx)

Three channel 16-bit unsigned planar YUV4:2:2 conversion to three channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic, with user set alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **aSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nAlpha** – 16-bit unsigned alpha constant.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiNV12ToRGB_8u_ColorTwist32f_P2C3R_Ctx(const Npp8u *const pSrc[2], int
                                                    aSrcStep[2], Npp8u *pDst, int
                                                    nDstStep, NppiSize oSizeROI, const
                                                    Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Two channel 8-bit unsigned planar NV12 conversion to three channel 8-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **aSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiNV12ToRGB_16u_ColorTwist32f_P2C3R_Ctx(const Npp16u *const pSrc[2], int
                                                    aSrcStep[2], Npp16u *pDst, int
                                                    nDstStep, NppiSize oSizeROI, const
                                                    Npp32f aTwist[3][4],
                                                    NppStreamContext nppStreamCtx)
```

Two channel 16-bit unsigned planar NV12 conversion to three channel 16-bit unsigned packed RGB, using a Color Twist to compute the exact color space arithmetic.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **aSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

### 1.7.1.1 Color To Gray Conversion

Routines for converting color images to grayscale.

#### RGBToGray

RGB to CCIR601 Gray conversion.

Here is how NPP converts gamma corrected RGB to CCIR601 Gray.

```
nGray = 0.299F * R + 0.587F * G + 0.114F * B;
```

```
NppStatus nppiRGBToGray_8u_C3C1R_Ctx(const Npp8u *pSrc, int nSrcStep, Npp8u *pDst, int
                                     nDstStep, NppiSize oSizeROI, NppStreamContext
                                     nppStreamCtx)
```

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiRGBToGray_8u_C3C1R(const Npp8u *pSrc, int nSrcStep, Npp8u *pDst, int nDstStep,
                                  NppiSize oSizeROI)
```

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_8u\_AC4C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed RGB with alpha to 1 channel 8-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_8u\_AC4C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 8-bit unsigned packed RGB with alpha to 1 channel 8-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16u\_C3C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16u\_C3C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16u\_AC4C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned packed RGB with alpha to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16u\_AC4C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 16-bit unsigned packed RGB with alpha to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16s\_C3C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16s\_C3C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16s\_AC4C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed packed RGB with alpha to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_16s\_AC4C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 16-bit signed packed RGB with alpha to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiRGBToGray\_32f\_C3C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToGray\_32f\_C3C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToGray\_32f\_AC4C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point packed RGB with alpha to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiRGBToGray\_32f\_AC4C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 32-bit floating point packed RGB with alpha to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

### ColorToGray

RGB Color to Gray conversion using user supplied conversion coefficients.

Here is how NPP converts gamma corrected RGB Color to Gray using user supplied conversion coefficients.

```
nGray = aCoeffs[0] * R + aCoeffs[1] * G + aCoeffs[2] * B;
```

For the C4C1R versions of the functions the calculations are as follows.

For BGRA or other formats with alpha just rearrange the coefficients accordingly.

```
nGray = aCoeffs[0] * R + aCoeffs[1] * G + aCoeffs[2] * B + aCoeffs[3] * A;
```

*NppStatus* **nppiColorToGray\_8u\_C3C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_8u\_C3C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_8u\_AC4C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed RGB with alpha to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_8u\_AC4C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

4 channel 8-bit unsigned packed RGB with alpha to 1 channel 8-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_8u\_C4C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed RGBA to 1 channel 8-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_8u\_C4C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4])

4 channel 8-bit unsigned packed RGBA to 1 channel 8-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_C3C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_C3C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_AC4C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned packed RGB with alpha to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_AC4C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

4 channel 16-bit unsigned packed RGB with alpha to 1 channel 16-bit unsigned packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_C4C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned packed RGBA to 1 channel 16-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16u\_C4C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4])

4 channel 16-bit unsigned packed RGBA to 1 channel 16-bit unsigned packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_C3C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_C3C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_AC4C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed packed RGB with alpha to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_AC4C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

4 channel 16-bit signed packed RGB with alpha to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_C4C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed packed RGBA to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_16s\_C4C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4])

4 channel 16-bit signed packed RGBA to 1 channel 16-bit signed packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_C3C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.

- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_C3C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_AC4C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point packed RGB with alpha to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_AC4C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[3])

4 channel 32-bit floating point packed RGB with alpha to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_C4C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point packed RGBA to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorToGray\_32f\_C4C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aCoeffs[4])

4 channel 32-bit floating point packed RGBA to 1 channel 32-bit floating point packed Gray conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aCoeffs** – fixed size array of constant floating point conversion coefficient values, one per color channel.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

## GradientColorToGray

RGB Color to Gray Gradient conversion using user selected gradient distance method.

```
NppStatus nppiGradientColorToGray_8u_C3C1R_Ctx(const Npp8u *pSrc, int nSrcStep, Npp8u
*pDst, int nDstStep, NppiSize oSizeROI,
NppiNorm eNorm, NppStreamContext
nppStreamCtx)
```

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray Gradient conversion.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiGradientColorToGray_8u_C3C1R(const Npp8u *pSrc, int nSrcStep, Npp8u *pDst,
int nDstStep, NppiSize oSizeROI, NppiNorm
eNorm)
```

3 channel 8-bit unsigned packed RGB to 1 channel 8-bit unsigned packed Gray Gradient conversion.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

```
NppStatus nppiGradientColorToGray_16u_C3C1R_Ctx(const Npp16u *pSrc, int nSrcStep,
Npp16u *pDst, int nDstStep, NppiSize
oSizeROI, NppiNorm eNorm,
NppStreamContext nppStreamCtx)
```

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray Gradient conversion.

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGradientColorToGray\_16u\_C3C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiNorm* eNorm)

3 channel 16-bit unsigned packed RGB to 1 channel 16-bit unsigned packed Gray Gradient conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGradientColorToGray\_16s\_C3C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiNorm* eNorm, *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray Gradient conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGradientColorToGray\_16s\_C3C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiNorm* eNorm)

3 channel 16-bit signed packed RGB to 1 channel 16-bit signed packed Gray Gradient conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGradientColorToGray\_32f\_C3C1R\_Ctx**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiNorm* eNorm, *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray Gradient conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGradientColorToGray\_32f\_C3C1R**( const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppiNorm* eNorm)

3 channel 32-bit floating point packed RGB to 1 channel 32-bit floating point packed Gray Gradient conversion.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **eNorm** – Gradient distance method to use.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

### 1.7.1.2 Color Debayer

Grayscale Color Filter Array to RGB Color Debayer conversion.

Generates one RGB color pixel for every grayscale source pixel. Source and destination images must have even width and height. Missing pixel colors are generated using bilinear interpolation with chroma correlation of generated green values (eInterpolation MUST be set to 0). eGrid allows the user to specify the Bayer grid registration position at source image location oSrcROI.x, oSrcROI.y relative to pSrc. Possible registration positions are:

NPPI_BAYER_BGGR	NPPI_BAYER_RGGB	NPPI_BAYER_GBRG	NPPI_BAYER_GRBG
B G G R	R G G B	G B R G	G R B G

If it becomes necessary to access source pixels outside source image then the source image borders are mirrored.

Here is how the algorithm works. R, G, and B base pixels from the source image are used unmodified. To generate R values for those G pixels, the average of  $R(x - 1, y)$  and  $R(x + 1, y)$  or  $R(x, y - 1)$  and  $R(x, y + 1)$  is used depending on whether the left and right or top and bottom pixels are R base pixels. To generate B values for those G pixels, the same algorithm is used using nearest B values. For an R base pixel, if there are no B values in the upper, lower, left, or right adjacent pixels then B is the average of B values in the 4 diagonal (G base) pixels. The same algorithm is used using R values to generate the R value of a B base pixel. Chroma correlation is applied to generated G values only, for a B base pixel  $G(x - 1, y)$  and  $G(x + 1, y)$  are averaged or  $G(x, y - 1)$  and  $G(x, y + 1)$  are averaged depending on whether the absolute difference between  $B(x, y)$  and the average of  $B(x - 2, y)$  and  $B(x + 2, y)$  is smaller than the absolute difference between  $B(x, y)$  and the average of  $B(x, y - 2)$  and  $B(x, y + 2)$ . For an R base pixel the same algorithm is used testing against the surrounding R values at those offsets. If the horizontal and vertical differences are the same at one of those pixels then the average of the four left, right, upper and lower G values is used instead.

### Functions

*NppStatus* **nppiCFAToRGB\_8u\_C1C3R\_Ctx**( const *Npp8u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp8u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *NppStreamContext* nppStreamCtx )

1 channel 8-bit unsigned packed CFA grayscale Bayer pattern to 3 channel 8-bit unsigned packed RGB conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*

- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGB\_8u\_C1C3R**(const *Npp8u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp8u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation)

1 channel 8-bit unsigned packed CFA grayscale Bayer pattern to 3 channel 8-bit unsigned packed RGB conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGBA\_8u\_C1AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp8u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *Npp8u* nAlpha, *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned packed CFA grayscale Bayer pattern to 4 channel 8-bit unsigned packed RGB conversion with alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nAlpha** – constant alpha value to be written to each destination pixel

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGBA\_8u\_C1AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp8u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *Npp8u* nAlpha)

1 channel 8-bit unsigned packed CFA grayscale Bayer pattern to 4 channel 8-bit unsigned packed RGB conversion with alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nAlpha** – constant alpha value to be written to each destination pixel

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGB\_16u\_C1C3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp16u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *NppStreamContext* nppStreamCtx)

1 channel 16-bit unsigned packed CFA grayscale Bayer pattern to 3 channel 16-bit unsigned packed RGB conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGB\_16u\_C1C3R**(const *Npp16u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp16u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation)

1 channel 16-bit unsigned packed CFA grayscale Bayer pattern to 3 channel 16-bit unsigned packed RGB conversion.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGBA\_16u\_C1AC4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp16u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *Npp16u* nAlpha, *NppStreamContext* nppStreamCtx)

1 channel 16-bit unsigned packed CFA grayscale Bayer pattern to 4 channel 16-bit unsigned packed RGB conversion with alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nAlpha** – constant alpha value to be written to each destination pixel
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCFAToRGBA\_16u\_C1AC4R**(const *Npp16u* \*pSrc, int nSrcStep, *NppiSize* oSrcSize, *NppiRect* oSrcROI, *Npp16u* \*pDst, int nDstStep, *NppiBayerGridPosition* eGrid, *NppiInterpolationMode* eInterpolation, *Npp16u* nAlpha)

1 channel 16-bit unsigned packed CFA grayscale Bayer pattern to 4 channel 16-bit unsigned packed RGB conversion with alpha.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **oSrcSize** – full source image width and height relative to pSrc.
- ▶ **oSrcROI** – rectangle specifying starting source image pixel x and y location relative to pSrc and ROI width and height.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **eGrid** – enumeration value specifying bayer grid registration position at location oSrcROI.x, oSrcROI.y relative to pSrc.
- ▶ **eInterpolation** – MUST be NPPI\_INTER\_UNDEFINED
- ▶ **nAlpha** – constant alpha value to be written to each destination pixel

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

### 1.7.1.3 Color Gamma Correction

Routines for correcting image color gamma.

#### GammaFwd

Forward gamma correction.

*NppStatus* **nppiGammaFwd\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed color not in place forward gamma correction.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned packed color not in place forward gamma correction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGammaFwd\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed color in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGammaFwd\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned packed color in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGammaFwd\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color with alpha not in place forward gamma correction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** Image Data Related Error Codes, ROI Related Error Codes

*NppStatus* **nppiGammaFwd\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 8-bit unsigned packed color with alpha not in place forward gamma correction.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color with alpha in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

4 channel 8-bit unsigned packed color with alpha in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_P3R\_Ctx**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*pDst[3], int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar color not in place forward gamma correction.

**Parameters**

- ▶ **pSrc** – source planar pixel format image pointer array.
- ▶ **nSrcStep** – source planar pixel format image line step.
- ▶ **pDst** – destination planar pixel format image pointer array.
- ▶ **nDstStep** – destination planar pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_P3R**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*pDst[3], int nDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned planar color not in place forward gamma correction.

**Parameters**

- ▶ **pSrc** – source planar pixel format image pointer array.
- ▶ **nSrcStep** – source planar pixel format image line step.
- ▶ **pDst** – destination planar pixel format image pointer array.
- ▶ **nDstStep** – destination planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_IP3R\_Ctx**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar color in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaFwd\_8u\_IP3R**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned planar color in place forward gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

## GammaInv

Inverse gamma correction.

*NppStatus* **nppiGammaInv\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed color not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned packed color not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed color in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – *in place packed pixel format image pointer*.
- ▶ **nSrcDstStep** – *in place packed pixel format image line step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned packed color in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – *in place packed pixel format image pointer*.
- ▶ **nSrcDstStep** – *in place packed pixel format image line step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color with alpha not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI)

4 channel 8-bit unsigned packed color with alpha not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color with alpha in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI)

4 channel 8-bit unsigned packed color with alpha in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_P3R\_Ctx**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*pDst[3], int nDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar color not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – source planar pixel format image pointer array.
- ▶ **nSrcStep** – source planar pixel format image line step.
- ▶ **pDst** – destination planar pixel format image pointer array.
- ▶ **nDstStep** – destination planar pixel format image line step.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_P3R**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*pDst[3], int nDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned planar color not in place inverse gamma correction.

**Parameters**

- ▶ **pSrc** – source planar pixel format image pointer array.
- ▶ **nSrcStep** – source planar pixel format image line step.
- ▶ **pDst** – destination planar pixel format image pointer array.
- ▶ **nDstStep** – destination planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_IP3R\_Ctx**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar color in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiGammaInv\_8u\_IP3R**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI)

3 channel 8-bit unsigned planar color in place inverse gamma correction.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

#### 1.7.1.4 Complement Color Key

Routines for performing complement color key replacement.

## CompColorKey

Complement color key replacement.

*NppStatus* **nppiCompColorKey\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst, *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

### Parameters

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCompColorKey\_8u\_C1R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst)

1 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

### Parameters

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCompColorKey\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

**Parameters**

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant array
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCompColorKey\_8u\_C3R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[3])

3 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

**Parameters**

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant array

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCompColorKey\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

**Parameters**

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant array
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiCompColorKey\_8u\_C4R**(const *Npp8u* \*pSrc1, int nSrc1Step, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[4])

4 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2.

#### Parameters

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant array

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiAlphaCompColorKey\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[4], *NppiAlphaOp* nppiAlphaOp, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2 with alpha blending.

#### Parameters

- ▶ **pSrc1** – source1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source1 packed pixel format image line step.
- ▶ **nAlpha1** – source1 image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **nAlpha2** – source2 image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **nColorKeyConst** – color key constant array
- ▶ **nppiAlphaOp** – *NppiAlphaOp* alpha compositing operation selector (excluding premul ops).

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiAlphaCompColorKey\_8u\_AC4R**(const *Npp8u* \*pSrc1, int nSrc1Step, *Npp8u* nAlpha1, const *Npp8u* \*pSrc2, int nSrc2Step, *Npp8u* nAlpha2, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, *Npp8u* nColorKeyConst[4], *NppiAlphaOp* nppAlphaOp)

4 channel 8-bit unsigned packed color complement color key replacement of source image 1 by source image 2 with alpha blending.

#### Parameters

- ▶ **pSrc1** – source 1 packed pixel format image pointer.
- ▶ **nSrc1Step** – source 1 packed pixel format image line step.
- ▶ **nAlpha1** – source 1 image alpha opacity (0 - max channel pixel value).
- ▶ **pSrc2** – source2 packed pixel format image pointer.
- ▶ **nSrc2Step** – source2 packed pixel format image line step.
- ▶ **nAlpha2** – source2 image alpha opacity (0 - max channel pixel value).
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **nColorKeyConst** – color key constant array
- ▶ **nppAlphaOp** – *NppiAlphaOp* alpha compositing operation selector (excluding premul ops).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

### 1.7.1.5 ColorTwist

Routines for converting between various image color models using user supplied matrix coefficients.

#### ColorTwist

Perform color twist pixel processing.

Color twist consists of applying the following formula to each image pixel using coefficients from the user supplied color twist host matrix array as follows where dst[x] and src[x] represent destination pixel and source pixel channel or plane x. The full sized coefficient matrix should be sent for all pixel channel sizes, the function will process the appropriate coefficients and channels for the corresponding pixel size.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3]
```

*NppStatus* **nppiColorTwist32f\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C1IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C1IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C2R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C2R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C2IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C2IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit unsigned color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is unmodified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_C4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is unmodified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit unsigned color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

`NppStatus nppiColorTwist32f_8u_AC4IR_Ctx(Npp8u *pSrcDst, int nSrcDstStep, NppiSize oSizeROI, const Npp32f aTwist[3][4], NppStreamContext nppStreamCtx)`

4 channel 8-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

`NppStatus nppiColorTwist32f_8u_AC4IR(Npp8u *pSrcDst, int nSrcDstStep, NppiSize oSizeROI, const Npp32f aTwist[3][4])`

4 channel 8-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

`NppStatus nppiColorTwist32fC_8u_C4R_Ctx(const Npp8u *pSrc, int nSrcStep, Npp8u *pDst, int nDstStep, NppiSize oSizeROI, const Npp32f aTwist[4][4], const Npp32f aConstants[4], NppStreamContext nppStreamCtx)`

4 channel 8-bit unsigned color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aConstants[1]
```

(continues on next page)

(continued from previous page)

```

dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]

```

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fC\_8u\_C4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 8-bit unsigned color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```

dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]

```

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fC\_8u\_C4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fC\_8u\_C4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 8-bit unsigned in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_P3R\_Ctx**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_P3R**(const *Npp8u* \*const pSrc[3], int nSrcStep, *Npp8u* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit unsigned planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_IP3R\_Ctx**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8u\_IP3R**(*Npp8u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit unsigned planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C1R\_Ctx**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C1R**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C1IR\_Ctx**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C1IR**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C2R\_Ctx**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C2R**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C2IR\_Ctx**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C2IR**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C3R\_Ctx**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C3R**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C3IR\_Ctx**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C3IR**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C4R\_Ctx**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit signed color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C4R**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit signed color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C4IR\_Ctx**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is unmodified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_C4IR**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is unmodified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_AC4R\_Ctx**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit signed color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_AC4R**(const *Npp8s* \*pSrc, int nSrcStep, *Npp8s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit signed color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_AC4IR\_Ctx**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_AC4IR**(*Npp8s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 8-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_P3R\_Ctx**(const *Npp8s* \*const pSrc[3], int nSrcStep, *Npp8s* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit signed planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_P3R**(const *Npp8s* \*const pSrc[3], int nSrcStep, *Npp8s* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit signed planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_IP3R\_Ctx**(*Npp8s* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 8-bit signed planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_8s\_IP3R**(*Npp8s* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 8-bit signed planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C1IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C1IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C2R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C2R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C2IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C2IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C3R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit unsigned color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C3IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_C3IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit unsigned in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_AC4R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 16-bit unsigned color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_AC4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_AC4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 16-bit unsigned in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_P3R\_Ctx**(const *Npp16u* \*const pSrc[3], int nSrcStep, *Npp16u* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_P3R**(const *Npp16u* \*const pSrc[3], int nSrcStep, *Npp16u* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit unsigned planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_IP3R\_Ctx**(*Npp16u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16u\_IP3R**(*Npp16u* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit unsigned planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C1IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C1IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C2R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C2R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C2IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C2IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C3R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C3R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit signed color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C3IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_C3IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit signed in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiColorTwist32f_16s_AC4R(const Npp16s *pSrc, int nSrcStep, Npp16s *pDst, int nDstStep, NppiSize oSizeROI, const Npp32f aTwist[3][4])
```

4 channel 16-bit signed color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiColorTwist32f_16s_AC4IR_Ctx(Npp16s *pSrcDst, int nSrcDstStep, NppiSize oSizeROI, const Npp32f aTwist[3][4], NppStreamContext nppStreamCtx)
```

4 channel 16-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_AC4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 16-bit signed in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_P3R\_Ctx**(const *Npp16s* \*const pSrc[3], int nSrcStep, *Npp16s* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_P3R**(const *Npp16s* \*const pSrc[3], int nSrcStep, *Npp16s* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit signed planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_IP3R\_Ctx**(*Npp16s* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16s\_IP3R**(*Npp16s* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit signed planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C1R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C1R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C1IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C1IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C2R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiColorTwist32f_16f_C2R(const Npp16f *pSrc, int nSrcStep, Npp16f *pDst, int  
nDstStep, NppiSize oSizeROI, const Npp32f  
aTwist[3][4])
```

2 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

```
NppStatus nppiColorTwist32f_16f_C2IR_Ctx(Npp16f *pSrcDst, int nSrcDstStep, NppiSize  
oSizeROI, const Npp32f aTwist[3][4],  
NppStreamContext nppStreamCtx)
```

2 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C2IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C3R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C3R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit floating point color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C3IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C3IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 16-bit floating point in place color twist.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point color twist, with alpha copy.

An input color twist matrix with 32-bit floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C4R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 16-bit floating point color twist, with alpha copy.

An input color twist matrix with 32-bit floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C4IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with 32-bit floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not modified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32f\_16f\_C4IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 16-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with 32-bit floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not modified.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fc\_16f\_C4R\_Ctx**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with 32-bit floating-point coefficient values with an additional 32-bit floating point constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fc\_16f\_C4R**(const *Npp16f* \*pSrc, int nSrcStep, *Npp16f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 16-bit floating point color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with 32-bit floating-point coefficient values with an additional 32-bit floating point constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fC\_16f\_C4IR\_Ctx**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with 32-bit floating-point coefficient values with an additional 32-bit floating point constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist32fC\_16f\_C4IR**(*Npp16f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 16-bit floating point in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with 32-bit floating-point coefficient values with an additional 32-bit floating point constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]
```

### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.

- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

1 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C1IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

1 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C2R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).

- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C2R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C2IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

2 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C2IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

2 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 32-bit floating point color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

#### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 32-bit floating point in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 32-bit floating point color twist, with alpha copy.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is copied unmodified from the source pixel to the destination pixel.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not modified.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_C4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 32-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not modified.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 32-bit floating point color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

4 channel 32-bit floating point in place color twist, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied with in ROI. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32fC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aConstants[3]
```

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32fC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 32-bit floating point color twist with 4x4 matrix and constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aConstants[3]
```

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32fC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aConstants[3]
```

**Parameters**

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32fC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[4][4], const *Npp32f* aConstants[4])

4 channel 32-bit floating point in place color twist with 4x4 matrix and an additional constant vector addition.

An input 4x4 color twist matrix with floating-point coefficient values with an additional constant vector addition is applied within ROI. For this particular version of the function the result is generated as shown below.

```

dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aConstants[0]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aConstants[1]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aConstants[2]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aConstants[3]

```

### Parameters

- ▶ **pSrcDst** – in place packed pixel format image pointer.
- ▶ **nSrcDstStep** – in place packed pixel format image line step.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **aConstants** – fixed size array of constant values, one per channel..

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_P3R\_Ctx**(const *Npp32f* \*const pSrc[3], int nSrcStep, *Npp32f* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_P3R**(const *Npp32f* \*const pSrc[3], int nSrcStep, *Npp32f* \*const pDst[3], int nDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 32-bit floating point planar color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.

- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_IP3R\_Ctx**(*Npp32f* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwist\_32f\_IP3R**(*Npp32f* \*const pSrcDst[3], int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* aTwist[3][4])

3 channel 32-bit floating point planar in place color twist.

An input color twist matrix with floating-point coefficient values is applied within ROI.

**Parameters**

- ▶ **pSrcDst** – in place planar pixel format image pointer array, one pointer per plane.
- ▶ **nSrcDstStep** – in place planar pixel format image line step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **aTwist** – The color twist matrix with floating-point coefficient values.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

### 1.7.1.6 ColorTwistBatch

Routines for converting between various image color models using user supplied matrix coefficients on batches of images.

## ColorTwistBatch

Perform color twist pixel batch processing.

Color twist consists of applying the following formula to each image pixel using coefficients from one or more user supplied color twist device memory matrix arrays as follows where  $dst[x]$  and  $src[x]$  represent destination pixel and source pixel channel or plane  $x$ . The full sized coefficient matrix should be sent for all pixel channel sizes, the function will process the appropriate coefficients and channels for the corresponding pixel size. ColorTwistBatch generally takes the same parameter list as ColorTwist except that there is a list of  $N$  instances of those parameters ( $N > 1$ ) and that list is passed in device memory; The matrix pointers referenced for each image in the batch also need to point to device memory matrix values. A convenient data structure is provided that allows for easy initialization of the parameter lists. The only restriction on these functions is that there is one single ROI which is applied respectively to each image in the batch. The primary purpose of this function is to provide improved performance for batches of smaller images as long as GPU resources are available. Therefore it is recommended that the function not be used for very large images as there may not be resources available for processing several large images simultaneously.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3]
```

*NppStatus* **nppiColorTwistBatch32f\_8u\_C1R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C1R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

**Parameters**

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C1IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

**Parameters**

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C1IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

**Parameters**

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C3R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C3R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C3IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.

- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C3IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_AC4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_AC4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_AC4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer in place color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_8u\_AC4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer in place color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fc\_8u\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```

dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]

```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fc\_8u\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```

dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]

```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_8u\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned integer in place color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +

dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_8u\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 8-bit unsigned integer in place color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```

dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]

```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C1R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C1R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.

- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C1IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C1IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C3R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C3R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C3IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C3IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 32-bit floating point color twist batch.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 32-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.

- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_AC4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_AC4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 32-bit floating point color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_AC4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point in place color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

**Parameters**

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32f\_AC4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 32-bit floating point in place color twist batch, not affecting Alpha.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

**Parameters**

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32fC\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32fC\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 32-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32fC\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel in place 32-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch\_32fC\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel in place 32-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C1R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C1R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C1IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

1 channel 16-bit floating point in place color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C1IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

1 channel 16-bit floating point in place color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C3R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C3R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C3IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

3 channel 16-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C3IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

3 channel 16-bit floating point in place color twist batch.

An input color twist matrix with floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 16-bit floating point color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within the ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point in place color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of *NppiColorTwistBatchCXR* structures.
- ▶ **nBatchSize** – Number of *NppiColorTwistBatchCXR* structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32f\_16f\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 16-bit floating point in place color twist batch.

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_16f\_C4R\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel 16-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with 32-bit floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_16f\_C4R**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel 16-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with 32-bit floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_16f\_C4IR\_Ctx**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize, *NppStreamContext* nppStreamCtx)

4 channel in place 16-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with 32-bit floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

*NppStatus* **nppiColorTwistBatch32fC\_16f\_C4IR**(*Npp32f* nMin, *Npp32f* nMax, *NppiSize* oSizeROI, *NppiColorTwistBatchCXR* \*pBatchList, int nBatchSize)

4 channel in place 16-bit floating point color twist with 4x5 matrix including a constant vector (20 coefficients total).

An input 4x5 color twist matrix with 32-bit floating-point coefficient values including a constant (in the fourth column) vector is applied within ROI. For this particular version of the function the result is generated as shown below.

```
dst[0] = aTwist[0][0] * src[0] + aTwist[0][1] * src[1] + aTwist[0][2] * src[2] +
↪ aTwist[0][3] * src[3] + aTwist[0][4]
dst[1] = aTwist[1][0] * src[0] + aTwist[1][1] * src[1] + aTwist[1][2] * src[2] +
↪ aTwist[1][3] * src[3] + aTwist[1][4]
dst[2] = aTwist[2][0] * src[0] + aTwist[2][1] * src[1] + aTwist[2][2] * src[2] +
↪ aTwist[2][3] * src[3] + aTwist[2][4]
dst[3] = aTwist[3][0] * src[0] + aTwist[3][1] * src[1] + aTwist[3][2] * src[2] +
↪ aTwist[3][3] * src[3] + aTwist[3][4]
```

An input color twist matrix with 32-bit floating-point coefficient values is applied within ROI for each image in batch. Color twist matrix can vary per image. The same ROI is applied to each image.

#### Parameters

- ▶ **nMin** – Minimum clamp value.
- ▶ **nMax** – Maximum saturation and clamp value.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pBatchList** – Device memory pointer to nBatchSize list of NppiColorTwistBatchCXR structures.
- ▶ **nBatchSize** – Number of NppiColorTwistBatchCXR structures in this call (must be > 1).

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

### 1.7.1.7 ColorLUT

Perform image color processing using members of various types of color look up tables.

#### Functions

*NppStatus* **nppiLUT\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)

- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C1IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C1IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

```
NppStatus nppiLUT_8u_C4R(const Npp8u *pSrc, int nSrcStep, Npp8u *pDst, int nDstStep, NppiSize
                        oSizeROI, const Npp32s *pValues[4], const Npp32s *pLevels[4], int
                        nLevels[4])
```

4 channel 8-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_C4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 8-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 8-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 8-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C1IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C1IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C3R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C3IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C3IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C4R**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C4IR\_Ctx**( *Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_C4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*

- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_AC4R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_AC4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16u\_AC4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*

- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C1IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C1IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C3R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C3R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C3IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.

- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C3IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.

- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_C4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_AC4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_AC4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_16s\_AC4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C1IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels)

32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C3R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C3R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

3 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

3 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4])

4 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points with no interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_C4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4])

4 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context*.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

4 channel 32-bit floating point look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

4 channel 32-bit floating point look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 1024 (the current size limit).

#### 1.7.1.8 ColorLUTLinear

Perform image color processing using linear interpolation between members of various types of color look up tables.

#### Functions

*NppStatus* **nppiLUT\_Linear\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION <<<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be device memory pointers.

<<<<<<<

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is now a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is now a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION <<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be device memory pointers.

<<<<<<<

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is now a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is now a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C1IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C1IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C3R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION <<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

&lt;&lt;&lt;&lt;&lt;&lt;&lt;

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C3R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION &lt;&lt;&lt;&lt;&lt;&lt;&lt;

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

&lt;&lt;&lt;&lt;&lt;&lt;

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION <<<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

<<<<<<<<

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C4R**( const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 8-bit unsigned linear interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

ATTENTION ATTENTION <<<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

<<<<<<<<

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*

- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_C4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 8-bit unsigned linear interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_AC4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned linear interpolated look-up-table color conversion, not affecting Alpha. The LUT is derived from a set of user defined mapping points through linear interpolation. Alpha channel is the last channel and is not processed.

ATTENTION ATTENTION <<<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

<<<<<<<<

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_AC4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 8-bit unsigned linear interpolated look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through linear interpolation. Alpha channel is the last channel and is not processed.

ATTENTION ATTENTION <<<<<<<<

NOTE: As of the 5.0 release of NPP, the pValues and pLevels pointers need to be host memory pointers to arrays of device memory pointers.

<<<<<<<<

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned linear interpolated look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through linear interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – *Application Managed Stream Context.*

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 8-bit unsigned linear interpolated look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through linear interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.

- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Linear\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C1IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C1IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)

- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C3R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C3R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.

- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C3IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C3IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16u_C4R_Ctx`(const `Npp16u` \*pSrc, int nSrcStep, `Npp16u` \*pDst, int nDstStep, `NppiSize` oSizeROI, const `Npp32s` \*pValues[4], const `Npp32s` \*pLevels[4], int nLevels[4], `NppStreamContext` nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16u_C4R`(const `Npp16u` \*pSrc, int nSrcStep, `Npp16u` \*pDst, int nDstStep, `NppiSize` oSizeROI, const `Npp32s` \*pValues[4], const `Npp32s` \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_C4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_AC4R\_Ctx**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16u\_AC4R**( const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16u_AC4IR_Ctx`(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16u_AC4IR`(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16s_C1IR_Ctx`(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16s_C1IR`(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_16s_C3R_Ctx`(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C3R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C3IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C3IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_C4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_AC4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_AC4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_16s\_AC4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – In-Place Image Pointer.
- ▶ **nSrcDstStep** – In-Place-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_32f_C1IR_Ctx`( `Npp32f *pSrcDst`, `int nSrcDstStep`, `NppiSize oSizeROI`, `const Npp32f *pValues`, `const Npp32f *pLevels`, `int nLevels`, `NppStreamContext nppStreamCtx`)

32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_32f_C1IR`( `Npp32f *pSrcDst`, `int nSrcDstStep`, `NppiSize oSizeROI`, `const Npp32f *pValues`, `const Npp32f *pLevels`, `int nLevels`)

32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Linear_32f_C3R_Ctx`( `const Npp32f *pSrc`, `int nSrcStep`, `Npp32f *pDst`, `int nDstStep`, `NppiSize oSizeROI`, `const Npp32f *pValues[3]`, `const Npp32f *pLevels[3]`, `int nLevels[3]`, `NppStreamContext nppStreamCtx`)

3 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

```
NppStatus nppiLUT_Linear_32f_C3R(const Npp32f *pSrc, int nSrcStep, Npp32f *pDst, int nDstStep, NppiSize oSizeROI, const Npp32f *pValues[3], const Npp32f *pLevels[3], int nLevels[3])
```

3 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C3IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C3IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

3 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4])

4 channel 32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using linear interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_C4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[4], const *Npp32f* \*pLevels[4], int nLevels[4])

4 channel 32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_AC4R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_AC4R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

4 channel 32-bit floating point look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_AC4IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 32-bit floating point look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Linear\_32f\_AC4IR**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues[3], const *Npp32f* \*pLevels[3], int nLevels[3])

4 channel 32-bit floating point look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

### 1.7.1.9 ColorLUTCubic

Perform image color processing using linear interpolation between members of various types of color look up tables.

#### Functions

*NppStatus* **nppiLUT\_Cubic\_8u\_C1R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ **NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR** if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C1R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)

- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C1IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C1IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 256.

`NppStatus nppiLUT_Cubic_8u_C3R_Ctx`(const `Npp8u` \*pSrc, int nSrcStep, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, const `Npp32s` \*pValues[3], const `Npp32s` \*pLevels[3], int nLevels[3], `NppStreamContext` nppStreamCtx)

3 channel 8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 256.

`NppStatus nppiLUT_Cubic_8u_C3R`(const `Npp8u` \*pSrc, int nSrcStep, `Npp8u` \*pDst, int nDstStep, `NppiSize` oSizeROI, const `Npp32s` \*pValues[3], const `Npp32s` \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C3IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C3IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C4R\_Ctx**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_C4R**(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 8-bit unsigned cubic interpolated look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 256.

`NppStatus nppiLUT_Cubic_8u_C4IR_Ctx`(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 256.

`NppStatus nppiLUT_Cubic_8u_C4IR`(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 256.

`NppStatus nppiLUT_Cubic_8u_AC4R_Ctx`(const *Npp8u* \*pSrc, int nSrcStep, *Npp8u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned cubic interpolated look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through cubic interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

```
NppStatus nppiLUT_Cubic_8u_AC4R( const Npp8u *pSrc, int nSrcStep, Npp8u *pDst, int nDstStep,
                                NppiSize oSizeROI, const Npp32s *pValues[3], const Npp32s
                                *pLevels[3], int nLevels[3])
```

4 channel 8-bit unsigned cubic interpolated look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through cubic interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_AC4IR\_Ctx**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through cubic interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_8u\_AC4IR**(*Npp8u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 8-bit unsigned cubic interpolated look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points through cubic interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 256.

*NppStatus* **nppiLUT\_Cubic\_16u\_C1R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C1R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – Source-Image Pointer.
- ▶ **nSrcStep** – Source-Image Line Step.
- ▶ **pDst** – Destination-Image Pointer.
- ▶ **nDstStep** – Destination-Image Line Step.
- ▶ **oSizeROI** – Region-Of-Interest (ROI).
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Cubic_16u_C1IR_Ctx`(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Cubic_16u_C1IR`(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ `NPP_LUT_NUMBER_OF_LEVELS_ERROR` if the number of levels is less than 2 or greater than 1024 (the current size limit).

`NppStatus nppiLUT_Cubic_16u_C3R_Ctx`(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C3R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C3IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C3IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C4R**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_C4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit unsigned look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_AC4R\_Ctx**(const *Npp16u* \*pSrc, int nSrcStep, *Npp16u* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

```
NppStatus nppiLUT_Cubic_16u_AC4R(const Npp16u *pSrc, int nSrcStep, Npp16u *pDst, int
                                nDstStep, NppiSize oSizeROI, const Npp32s *pValues[3],
                                const Npp32s *pLevels[3], int nLevels[3])
```

4 channel 16-bit unsigned look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_AC4IR\_Ctx**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16u\_AC4IR**(*Npp16u* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit unsigned look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C1R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C1R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C1IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C1IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues, const *Npp32s* \*pLevels, int nLevels)

16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C3R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C3R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C3IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C3IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

3 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

**Parameters**

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*

- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*

- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_C4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[4], const *Npp32s* \*pLevels[4], int nLevels[4])

4 channel 16-bit signed look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points using no interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer*.
- ▶ **nSrcDstStep** – *In-Place-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.
- ▶ **pValues** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 4 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 4 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_AC4R\_Ctx**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer*.
- ▶ **nSrcStep** – *Source-Image Line Step*.
- ▶ **pDst** – *Destination-Image Pointer*.
- ▶ **nDstStep** – *Destination-Image Line Step*.
- ▶ **oSizeROI** – *Region-Of-Interest (ROI)*.

- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_AC4R**(const *Npp16s* \*pSrc, int nSrcStep, *Npp16s* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_AC4IR\_Ctx**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3], *NppStreamContext* nppStreamCtx)

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_16s\_AC4IR**(*Npp16s* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32s* \*pValues[3], const *Npp32s* \*pLevels[3], int nLevels[3])

4 channel 16-bit signed look-up-table in place color conversion, not affecting Alpha.

The LUT is derived from a set of user defined mapping points using no interpolation. Alpha channel is the last channel and is not processed.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined OUTPUT values.
- ▶ **pLevels** – Host pointer to an array of 3 device memory pointers, one per color CHANNEL, pointing to user defined INPUT values.
- ▶ **nLevels** – Host pointer to an array of 3 user defined number of input/output mapping points, one per color CHANNEL.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_32f\_C1R\_Ctx**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*

- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_32f\_C1R**(const *Npp32f* \*pSrc, int nSrcStep, *Npp32f* \*pDst, int nDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels)

32-bit floating point look-up-table color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrc** – *Source-Image Pointer.*
- ▶ **nSrcStep** – *Source-Image Line Step.*
- ▶ **pDst** – *Destination-Image Pointer.*
- ▶ **nDstStep** – *Destination-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)
- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)

**Returns** *Image Data Related Error Codes, ROI Related Error Codes*

- ▶ NPP\_LUT\_NUMBER\_OF\_LEVELS\_ERROR if the number of levels is less than 2 or greater than 1024 (the current size limit).

*NppStatus* **nppiLUT\_Cubic\_32f\_C1IR\_Ctx**(*Npp32f* \*pSrcDst, int nSrcDstStep, *NppiSize* oSizeROI, const *Npp32f* \*pValues, const *Npp32f* \*pLevels, int nLevels, *NppStreamContext* nppStreamCtx)

32-bit floating point look-up-table in place color conversion.

The LUT is derived from a set of user defined mapping points through cubic interpolation.

#### Parameters

- ▶ **pSrcDst** – *In-Place Image Pointer.*
- ▶ **nSrcDstStep** – *In-Place-Image Line Step.*
- ▶ **oSizeROI** – *Region-Of-Interest (ROI).*
- ▶ **pValues** – Pointer to an array of user defined OUTPUT values (this is a device memory pointer)

- ▶ **pLevels** – Pointer to an array of user defined INPUT values (this is a device memory pointer)
- ▶ **nLevels** – Number of user defined number of input/output mapping points (levels)
- ▶ **nppStreamCtx** – Application Managed Stream Context.
