Chapter 4. Medical Imaging Limitations	.7

Chapter 1. Introduction

ATTENTION: These guidelines are applicable to 3D convolution and deconvolution functions starting in NVIDIA[®] CUDA[®] Deep Neural Network library[™] (cuDNN) v7.6.3.

This document provides guidelines for setting the cuDNN library parameters to enhance the performance of 3D convolutions. Specifically, these guidelines are focused on settings such as filter sizes, padding and dilation settings. Additionally, an application-specific use-case, namely, medical imaging, is presented to demonstrate the performance enhancement of 3D convolutions with these recommended settings.

Specifically, these guidelines are applicable to the following functions and their associated data types:

- <u>cudnnConvolutionForward()</u>
- <u>cudnnConvolutionBackwardData()</u>
- <u>cudnnConvolutionBackwardFilter()</u>

For more information, see the <u>cuDNN Developer Guide</u> and <u>cuDNN API</u>.

Chapter 2. Best Practices For Medical Imaging

To optimize your performance in your model, ensure you meet the following general guidelines:

Layout

The layout is in NCHW format.

Filter size

The filter size is Tx1x1, Tx2x2, Tx3x3, Tx5x5, where T is a positive integer. There are additional limits for the value of T in wgrad and strided dgrad.

Stride

Arbitrary for forward and backward filter; dgrad/deconv: 1x1x1 or 2x2x2 with 2x2x2 filter.

Dilation

The dilation is 1x1x1.

Platform

The platform is Volta, Turing, and Ampere with input/output channels divisible by 8.

Batch/image size

cuDNN will fallback to non-Tensor Core kernel if it determines that the workspace required is larger than 256MB of GPU memory. The workspace required depends on many factors. For the Tensor Core kernels, the workspace size generally scales linearly with output tensor size. Therefore, this can be mitigated by using smaller image sizes or minibatch sizes.

2.1. Recommended Settings In cuDNN While Performing 3D Convolutions

The following tables show the specific improvements that were made in each release.

2.1.1. cuDNN 8.x.x

Recommended settings while performing 3D convolutions for cuDNN 8.x.x.

		8.0.3	8.0.0 and 8.0.1 Preview - 8.0.2	
Platform		NVIDIA Ampere GPU architecture		
		NVIDIA Turing GPU architecture		
		NVIDIA Volta GPU architecture		
Convolution (3D or 2D)	Convolution (3D or 2D)		nd 2D	
Convolution or deconvolution (fprop, dgrad, or wgrad)		fprop		
		dgrad		
		wgi	rad	
Grouped convolution	Yes or No	Yes		
	Group size	C_per_group == K_per_group == {4,8,16,32,64,128,256	C_per_group == K_per_group == }{4,8,16,32}	
Data layout format (NHW	с/мснw) ¹	NDHWC		
Input/output precision (FP16, FP32, or FP64)		FP16 and FP32 ²		
Accumulator (compute) precision (FP16, FP32, or FP64)		FP32		
Filter (kernel) sizes		No limitation		
Padding		No limitation		
Image sizes		2GB limitation for a tensor		
Number of channels	С	0 mod 8		
	К	0 mc	od 8	
Convolution mode		Cross-correlation and convolution		
Strides		dgrad: 1x1x1 or 2x2x2		
Dilation		No limitation		
Data pointer alignment		All data pointers are 16-bytes aligned.		

2.1.2. cuDNN 7.6.x

Recommended settings while performing 3D convolutions for cuDNN 7.6.x.

	7.6.5	7.6.4	7.6.2	7.6.1
Platform	Turing		Volta	
	Volta			
Convolution (3D or 2D)	3D and 2D		3D	
Convolution or deconvolution (fprop, dgrad, or wgrad)	fp	rop	fprop	fprop
~g~, og~,	dg	rad	dgrad	dgrad

¹ NHWC/NCHW corresponds to NDHWC/NCDHW in 3D convolution. ² With CUDNN_TENSOROP_MATH_ALLOW_CONVERSION pre-Ampere. Default TF32 math in Ampere.

		7.6.5	7.6.4	7.6.2	7.6.1
			wgrad		wgrad
Grouped	Yes or No	Yes		No	
convolution	Group size	C_per_group == K_per_group == {4,8,16,32}		NA	
Data layout fo	ormat (NHWC/NCHW) ³		NCDHW		NCDHW ⁴
Input/output FP64)	precision (FP16, FP32, or		FP16	FP16 or FP32	FP16 ⁵ or FP32 ⁶
Accumulator FP32, or FP64	(compute) precision (FP16, 4)		FP32	Better to be the same with input/ output precision.	FP32
Filter (kernel)	sizes		2x2x2		1x1x1
			T ⁷ x1x1		2x2x2
			Tx2x2		3x3x3
			Tx3x3		5x5x5
			Tx5x5		Tx1x1
					Tx2x2
					Tx3x3
					Tx5x5
					Tx1x1
					Tx2x2
					Tx3x3
					Tx5x5
Padding			No limitation		Filter // 2 ⁸
Image sizes		256 1	MB WS limit	No limitation	256 MB WS limit
Number of	С	Arbitrary			0 mod 8
channels K			Arbitrary		0 mod 8
Convolution mode		Cross-correlation for dgrad; otherwise, both modes		No lim	nitation
				Cross-correlatior	
Strides		1x1x	1 and 2x2x2 es for dgrad	2x2x2	1x1x1

³ NHWC/NCHW corresponds to NDHWC/NCDHW in 3D convolution. ⁴ With NCHW <> NH ⁵ FP16: CUDI

- With NCHW <> NHWC format transformation. FP16: CUDNN_TENSOROP_MATH FP32: CUDNN_TENSOROP_MATH_ALLOW_CONVERSION An arbitrary positive value.

6 7 8

	7.6.5	7.6.4	7.6.2	7.6.1
			Arbitrary stride	
Dilation	1x1x1			

Chapter 3. Medical Imaging Performance

The following table shows the average speed-up of **unique cuDNN 3D convolution calls** for each network that satisfies the conditions in <u>Best Practices For Medical Imaging</u>. The end-toend training performance will depend on a number of factors, such as framework overhead, kernel run time, and model architecture type.

Model	Batchsize	Avg. Speed-up of unique cuDNN 3D convolution API calls (7.6.3 vs. 7.5.1)
V-Net (3D-Image segmentation)	2	4.4x
	4	4.4x
	8	4x
	16	4x
	32	4x
	64	3.4x
	128	Зx
3D-UNet (3D-Image Segmentation)	2	4.4x
	4	4.1x
	8	4.4x
	16	4.3x
	32	4x
	64	4x
	128	4.2x

Chapter 4. Medical Imaging Limitations

Your application will be functional but slow if the model has:

- ▶ Channel counts lower than 32 (gets worse the lower it is)
- > Data gradients for convolutions with stride

If the above is in the network, use cuDNNFind to get the best option.

Notice

This document is provided for information purposes only and shall not be regarded as a warranty of a certain functionality, condition, or quality of a product. NVIDIA Corporation ("NVIDIA") makes no representations or warranties, expressed or implied, as to the accuracy or completeness of the information contained in this document and assumes no responsibility for any errors contained herein. NVIDIA shall have no liability for the consequences or use of such information or for any infringement of patents or other rights of third parties that may result from its use. This document is not a commitment to develop, release, or deliver any Material (defined below), code, or functionality.

NVIDIA reserves the right to make corrections, modifications, enhancements, improvements, and any other changes to this document, at any time without notice.

Customer should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

NVIDIA products are sold subject to the NVIDIA standard terms and conditions of sale supplied at the time of order acknowledgement, unless otherwise agreed in an individual sales agreement signed by authorized representatives of NVIDIA and customer ("Terms of Sale"). NVIDIA hereby expressly objects to applying any customer general terms and conditions with regards to the purchase of the NVIDIA product referenced in this document. No contractual obligations are formed either directly or indirectly by this document.

NVIDIA products are not designed, authorized, or warranted to be suitable for use in medical, military, aircraft, space, or life support equipment, nor in applications where failure or malfunction of the NVIDIA product can reasonably be expected to result in personal injury, death, or property or environmental damage. NVIDIA accepts no liability for inclusion and/or use is at customer's own risk.

NVIDIA makes no representation or warranty that products based on this document will be suitable for any specified use. Testing of all parameters of each product is not necessarily performed by NVIDIA. It is customer's sole responsibility to evaluate and determine the applicability of any information contained in this document, ensure the product is suitable and fit for the application planned by customer, and perform the necessary testing for the application in order to avoid a default of the application or the product. Weaknesses in customer's product designs may affect the quality and reliability of the NVIDIA product and may result in additional or different conditions and/or requirements beyond those contained in this document. NVIDIA accepts no liability related to any default, damage, costs, or problem which may be based on or attributable to: (i) the use of the NVIDIA product in any manner that is contrary to this document or (ii) customer product designs.

No license, either expressed or implied, is granted under any NVIDIA patent right, copyright, or other NVIDIA intellectual property right under this document. Information published by NVIDIA regarding third-party products or services does not constitute a license from NVIDIA to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property rights of the third party, or a license from NVIDIA under the patents or other intellectual property rights of NVIDIA.
