## Chapter 1. Layers and Features

The section lists the supported TensorRT layers and each of the features.

### Note:

- Supports broadcast indicates support for broadcast in this layer. This layer allows its two input tensors to be of dimensions [1, 5, 4, 3] and [1, 5, 1, 1], and its output is [1, 5, 4, 3]. The second input tensor has been broadcast in the innermost two dimensions.
- Supports broadcast across batch indicates support for broadcast across the batch dimension. "NA" in this column means it is not allowed in networks with an implicit batch dimension.

### Chapter 2. Layers and Precision

The section lists the TensorRT layers and the precision modes that each layer supports. It also lists the ability of the layer to run on Deep Learning Accelerator (DLA).

For more information about additional constraints, see <u>DLA Supported Layers</u>.

## Chapter 3. Layers for Flow-Control Constructs

The following table lists the TensorRT layers that can be used as interior layers in TensorRT flow-control constructs.

Currently, TensorRT supports loop constructs (using ILoopLayer) and ternary conditional constructs (using IIfConditionalLayer). Interior layers are layers that include the body of a loop or one of the two branches of an if-conditional.

An ILoopLayer interior layer may contain other loops and if-conditionals. An IIfConditionalLayer branch may contain other if-conditionals and loops.

Flow-control constructs do not support INT8 calibration and interior-layers cannot employ implicit-quantization (INT8 is supported only in explicit-quantization mode).

# Table 3.List of TensorRT Layers that are Supported as Interior Layers<br/>of Flow-control Constructs

Layer	Supported
<u>IActivationLayer</u>	Yes, when the operation is one of: kRELU,
	kSIGMOID, KTANH, KELU
<u>IAssertionLayer</u>	Yes
<u>IConcatenationLayer</u>	Yes
<u>IConstantLayer</u>	Yes
IConvolutionLayer > 2D Convolution	singleton channel and spatial dims, that are, the
	dimensions must be static or have a single value

IShapeLayer	Yes
<u>IShuffleLayer</u>	Yes
ISliceLayer	Yes
ISoftMaxLayer	Yes
ITopKLayer	No
<u>IUnaryLayer</u>	Yes, when the operation is one of: kABS, kCEIL, kERF, kEXP, kFLOOR, kLOG, kNEG, kNOT, kRECIP, kROUND, kSIGN, kSQRT, kSIN, kCOS, kATAN

## Chapter 4. Operators

To view the operators, refer to the <u>TensorRT Operators</u>.

TensorRT can optimize performance by fusing layers. For information about how to enable layer fusion optimizations, refer to <u>Types of Fusions</u>. For information about optimizing individual layer performance, refer to <u>Optimizing Layer Performance</u>.
