Chapter 1. Introduction

The NVIDIA DGX™ A100 system is the universal system purpose-built for all AI infrastructure and workloads, from analytics to training to inference. The system is built on eight NVIDIA A100 Tensor Core GPUs.

This document is for users and administrators of the DGX A100 system.
1.1 Hardware Overview

1.1.1 DGX A100 Models and Component Descriptions

There are two models of the NVIDIA DGX A100 system: the NVIDIA DGX A100 640GB system and the NVIDIA DGX A100 320GB system.

Model Differentiation

### 1.1.2 Mechanical Specifications

<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Form Factor</td>
<td>6U Rackmount</td>
</tr>
<tr>
<td>Height</td>
<td>10.4” (264 mm)</td>
</tr>
<tr>
<td>Width</td>
<td>19” (482.3 mm) max</td>
</tr>
<tr>
<td>Depth</td>
<td>35.3” (897.1 mm) max</td>
</tr>
<tr>
<td>System Weight</td>
<td>271.5 lbs (123.16 kg) max</td>
</tr>
</tbody>
</table>
1.1.3 Power Specifications

The DGX A100 system contains six power supplies with balanced distribution of the power load.

<table>
<thead>
<tr>
<th>Input</th>
<th>Specification for Each Power Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>200-240 volts AC</td>
<td>6.5 kW max. 3000 W @ 200-240 V, 16 A, 50-60 Hz</td>
</tr>
</tbody>
</table>

1.1.3.1 Support for N+N Redundancy

The DGX A100 includes six power supply units (PSU) configured for 3+3 redundancy. If three PSUs fail, the system will continue to operate at full power with the remaining three PSUs.

Note:
- If only two PSUs are working, the GPUs will not be available but the server will still boot. This is to allow you to gather debug or system logs or other data from the cache SSDs.
- If only one PSU is working, troubleshoot the cause for the loss of power from the other PSUs and correct. If faulty PSUs need to be replaced, shut the system down and install working PSUs.

1.1.3.2 DGX A100 Locking Power Cord Specification

The DGX A100 is shipped with a set of six (6) locking power cords that have been qualified for use with the DGX A100 to ensure regulatory compliance. Two locking power cord types are approved - switch-locking for the PSU side and twist-locking for the PSU side.

WARNING: To avoid electric shock or fire, only use the NVIDIA-provided power cords to connect power to the DGX A100. For more details, see “Electrical Precautions”

Power Cord Specification

<table>
<thead>
<tr>
<th>Power Cord Feature</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Electrical</td>
<td>250VAC, 16A</td>
</tr>
<tr>
<td>Plug Standard</td>
<td>C19/C20</td>
</tr>
<tr>
<td>Dimension</td>
<td>1200mm length</td>
</tr>
<tr>
<td>Compliance</td>
<td>Cord: UL62, IEC60227</td>
</tr>
<tr>
<td></td>
<td>Connector/Plug: IEC60320-1</td>
</tr>
</tbody>
</table>
1.1.3.3 Using the Locking Power Cords

Follow these instructions for using the locking power cords.

**Locking/Unlocking the PDU Side**

*Power Distribution Unit side*
- To INSERT, push the cable into the PDU socket
- To REMOVE, press the clips together and pull the cord out of the socket

**Locking/Unlocking the PSU Side (Cords with Switch-Lock Mechanism)**

*Power Supply (System) side - Switch locking*
- To INSERT or REMOVE make sure the cable is UNLOCKED and push/pull into/out of the socket

- To UNLOCK the power cord, move the switch to the unlocked position [indicator will show GREEN]

- To LOCK the power cord, move the switch to the locked position [indicator should show only RED]
Locking/Unlocking the PSU Side (Cords with Twist-Lock Mechanism)

Power Supply (System) side - Twist locking
To INSERT or REMOVE make sure the cable is UNLOCKED and push/pull into/out of the socket

To UNLOCK the power cord, twist the gray locking ring to the unlocked (indicator will show an unlocked padlock)

To LOCK the power cord, twist the gray locking ring to the locked position (indicator should show a locked padlock)
1.1.4 Environmental Specifications

<table>
<thead>
<tr>
<th>Feature</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating Temperature</td>
<td>5°C to 30°C (41°F to 86°F)</td>
</tr>
<tr>
<td>Relative Humidity</td>
<td>20% to 80% non-condensing</td>
</tr>
<tr>
<td>Airflow</td>
<td>840 CFM @ 80% fan PWM</td>
</tr>
<tr>
<td>Heat Output</td>
<td>22,179 BTU/hr</td>

1.2.2 Supported Network Cables and Adaptors

The DGX A100 system is not shipped with network cables or adaptors. You will need to purchase supported cables or adaptors for your network.

The ConnectX-6 firmware determines which cables and adaptors are supported. For a list of cables and adaptors compatible with the Mellanox ConnectX-6 VPI cards installed in the DGX A100 system,

1. Visit the Mellanox Firmware Release page.
2. From the left navigation menu, select the ConnectX model and corresponding firmware included in the DGX A100.
3. Select Firmware Compatible Products.
1.3 DGX A100 System Topology

1.4 DGX OS Software

The DGX A100 system comes pre-installed with a DGX software stack incorporating:

- An Ubuntu server distribution with supporting packages
- The following system management and monitoring software:
  - NVIDIA System Management (NVSM)
    Provides active health monitoring and system alerts for NVIDIA DGX nodes in a data center. It also provides simple commands for checking the health of the DGX A100 system from the command line.
  - Data Center GPU Management (DCGM)
    This software enables node-wide administration of GPUs and can be used for cluster and data-center level management.
- DGX A100 system support packages
- The NVIDIA GPU driver
- Docker Engine
- NVIDIA Container Toolkit
- Mellanox OpenFabrics Enterprise Distribution for Linux (MOFED)
- Mellanox Software Tools (MST)
- cachefilesd (daemon for managing cache data storage)
1.5 Additional Documentation

- **MIG User Guide**
  The new Multi-Instance GPU (MIG) feature allows the NVIDIA A100 GPU to be securely partitioned into up to seven separate GPU Instances for CUDA applications.

- **NGC Container Registry for DGX**
  How to access the NGC container registry for using containerized deep learning GPU-accelerated applications on your DGX A100 system.

- **NVSM Software User Guide**
  Contains instructions for using the NVIDIA System Management software.

- **DCGM Software User Guide**
  Contains instructions for using the Data Center GPU Manager software.

1.6 Customer Support

Contact NVIDIA Enterprise Support for assistance in reporting, troubleshooting, or diagnosing problems with your **DGX A100 system**. Also contact NVIDIA Enterprise Support for assistance in installing or moving the DGX A100 system.

- For contracted Enterprise Support questions, you can send an email: enterprisesupport@nvidia.com

- For additional details on how to obtain support, visit the NVIDIA Enterprise Support web site [https://www.nvidia.com/en-us/support/enterprise/](https://www.nvidia.com/en-us/support/enterprise/)

Our support team can help collect appropriate information about your issue and involve internal resources as needed.
Chapter 2. Connecting to the DGX A100

2.1 Connecting to the Console

Connect to the DGX A100 console using either a direct connection or a remote connection through the BMC.

CAUTION: Connect directly to the DGX A100 console if the DGX A100 system is connected to a 172.17.xx.xx subnet.

DGX OS Server software installs Docker Engine which uses the 172.17.xx.xx subnet by default for Docker containers. If the DGX A100 system is on the same subnet, you will not be able to establish a network connection to the DGX A100 system.

Refer to the section “Configuring Docker IP Addresses” for instructions on how to change the default Docker network settings.

2.1.1 Direct Connection

At either the front or the back of the DGX A100 system, connect a display to the VGA connector, and a keyboard to any of the USB ports.

Note: The display resolution must be 1440x900 or lower.
2.1.2 Remote Connection through the BMC

Note: BMC Security

NVIDIA recommends that customers follow best security practices for BMC management (IPMI port). These include, but are not limited to, such measures as:

- Restricting the DGX A100 IPMI port to an isolated, dedicated, management network
- Using a separate, firewalled subnet
- Configuring a separate VLAN for BMC traffic if a dedicated network is not available

See the section “Configuring Static IP Address for the BMC” if you need to configure a static IP address for the BMC.

This method requires that you have the BMC login credentials. These credentials depend on the following conditions:

**Prior to first-boot setup:** The default credentials are

- **Username:** admin
- **Password:** dgxluna.admin

**After first-boot setup:** During the first-boot procedure, you were prompted to configure an administrator username and password, and also a password for the BMC. The BMC username is the same as the administrator username

- **Username:** <administrator-username>
- **Password:** <bmc-password>

1. Make sure you have connected the BMC port on the DGX A100 system to your LAN.
2. Open a browser within your LAN and go to:
   https://<bmc-ip-address>/
   Make sure popups are allowed for the BMC address.
3. Log in.

4. From the left-side navigation menu, click Remote Control.

   The Remote Control page allows you to open a virtual Keyboard/Video/Mouse (KVM) on the DGX A100 system, as if you were using a physical monitor and keyboard connected to the front of the system.

5. Click Launch KVM.

   The DGX A100 console appears in your browser.
2.2 SSH Connection to the OS

After the system has been configured, you can also establish an SSH connection to the DGX A100 OS through the network port. See the section “Network Ports” to identify the port to use, and the section “Configuring Static IP Addresses for the Network Ports” if you need to configure a static IP address.
Chapter 3. First-Boot Setup

While NVIDIA partner network personnel or NVIDIA field service engineers will install the DGX A100 system at the site and perform the first boot setup, the first boot setup instructions are provided here for reference and to support any re-imaging of the server.

3.1 System Setup

These instructions describe the setup process that occurs the first time the DGX A100 system is powered on after delivery or after the server is re-imaged.

Be prepared to accept all End User License Agreements (EULAs) and to set up your username and password. To preview the EULA, visit https://www.nvidia.com/en-us/data-center/dgx-systems/support/ and click the DGX EULA link.

1. Connect to the DGX A100 console as explained in “Connecting to the Console”
2. Power on the DGX A100 system.
   • Using the physical power button
Chapter 3 First-Boot Setup

- Using the Remote BMC

The system will take a few minutes to boot.

1. If the DGX OS was installed with an encrypted root filesystem, you will be prompted to unlock the drive.

   Enter “nvidia3d” at the crypt: prompt.

2. You are presented with end user license agreements (EULAs) for the NVIDIA software.

   Accept the EULA to proceed with the installation.

3. Perform the steps to configure the DGX A100 software.
   a. Select your language and locale preferences.
   b. Select the country for your keyboard.
   c. Select your time zone.
   d. Confirm the UTC clock setting.
   e. Create an administrative user account with your name, username, and password.

      The administrator username is used also for the BMC login username and GRUB username.

      Note: The BMC software will not accept “sysadmin” for a user name. If you create this user name for the system log in, “sysadmin” will not be available for logging in to the BMC.

   f. Create a BMC admin password.
Chapter 3. First-Boot Setup

The BMC password must consist of a minimum of 13 characters.

---

**CAUTION:** Once you create your login credentials, the default admin/dgx-luna.admin credentials will no longer work.

---

g. *(Available starting with DGX OS 5.0)* Create a GRUB password.

> Your GRUB password must have at least 8 characters.

If it has less than 8 characters, you will not be able to continue.

> You can select OK without entering a password which will disable this step, but NVIDIA recommends setting the GRUB password for security hardening.

h. *(Available starting with DGX OS 5.0)* Create a root filesystem passphrase.

You will need the new passphrase to unlock the root filesystem when the system boots.

This step appears only if you installed the system with an encrypted root filesystem during DGX OS installation.

i. Choose a primary network interface for the DGX A100 system; for example, `enp226s0`.

This should typically be the interface that you will use for subsequent system configuration or in-band management. Do not select `enp37s0f3u1u3c2` (or `bmc_redfish0` or similar), as this is intended only for out-of-band management or future support of in-band tools accessing the Redfish APIs.

After you select the primary network interface, the system attempts to configure the interface for DHCP and then asks you to enter the name server addresses.

> If no DHCP is available, then click OK at the Network autoconfiguration failed dialog and configure the network manually.

> If you want to configure a static address, then click Cancel at the dialog after the DHCP configuration completes to restart the network configuration steps.

> If you need to select a different network interface, then click Cancel at the dialog after the DHCP configuration completes to restart the network configuration steps.

j. If prompted, fill in requested networking information, such as name server or domain name.

k. Choose a host name for the DGX A100 system.

After completing the setup process, the DGX A100 system reboots automatically and then presents the login prompt.
3.2 Post Setup Tasks

This section explains recommended tasks to perform after the initial system first-boot setup.

Note: RAID 1 Rebuild May Temporarily Affect System Performance - When the system is booted after restoring the image and running the first-boot setup, software RAID begins the process of rebuilding the RAID 1 array - creating a mirror of [or resynchronizing] the drive containing the software. System performance may be affected during the RAID 1 rebuild process, which can take an hour to complete.

During this time, the command “nvsm show health” will report a warning that the RAID volume is resyncing.

You can check the status of the RAID 1 rebuild process using “sudo nvsm show volumes”, and then inspecting the output under /systems/localhost/storage/volumes/md0/rebuild.

3.2.1 Obtain Software Updates

Update the software to ensure you are running the latest version.

Updating the software ensures your DGX A100 system contains important updates, including security updates. The Ubuntu Security Notice site [https://usn.ubuntu.com/] lists known Common Vulnerabilities and Exposures (CVEs), including those that can be resolved by updating the DGX OS software.

1. Run the package manager.

```bash
sudo apt update
```

2. Upgrade to the latest version.

```bash
sudo apt full-upgrade
```

3.2.2 Enabling the srp_daemon

The srp_daemon comes with the Mellanox drivers and is disabled by default. It is needed only if you are using RDMA over Infiniband [see SRP - SCSI RDMA Protocol]. If necessary, you can enable the srp_daemon by issuing the following.

```bash
sudo systemctl enable srp_daemon.service

sudo systemctl enable srptools.service
```
Chapter 4. Quick Start and Basic Operation

This chapter provides basic requirements and instructions for using the DGX A100 system, including how to perform a preliminary health check and how to prepare for running containers. Be sure to visit the DGX documentation website at https://docs.nvidia.com/dgx/ for additional product documentation.

4.1 Installation and Configuration

IMPORTANT: It is mandatory that your DGX A100 System be installed by NVIDIA partner network personnel or NVIDIA field service engineers. If not performed accordingly, your DGX A100 hardware warranty will be voided.

Before installation, make sure you have given all relevant site information to your Installation Partner.

4.2 Registration

To obtain support for your DGX A100 system, follow the instructions for registration in the Entitlement Certification email that was sent as part of the purchase.

Registration allows you access to the NVIDIA Enterprise Support Portal, technical support, software updates and access to set up an NGC for DGX account.

If you did not receive the information, open a case with the NVIDIA Enterprise Support Team by going to the NVIDIA Enterprise Support Portal. The site provides ways of contacting the NVIDIA Enterprise Services team for support without requiring an NVIDIA Enterprise Support account. See “Customer Support” on page 14.
4.3 Obtaining an NGC Account

NVIDIA GPU Cloud (NGC) provides simple access to GPU-optimized software for deep learning, machine learning and high-performance computing (HPC). An NGC account grants you access to these tools as well as the ability to set up a private registry to manage your customized software.

Work with NVIDIA Enterprise Support to set up an NGC enterprise account if you are the organization administrator for your DGX A100 purchase. See the NGC Container Registry for DGX User Guide (https://docs.nvidia.com/ngc/ngc-private-registry-user-guide/) for detailed instructions on getting an NGC enterprise account.

4.4 Turning DGX A100 On and Off

DGX A100 is a complex system, integrating a large number of cutting-edge components with specific startup and shutdown sequences. Observe the following startup and shutdown instructions.

4.4.1 Startup Considerations

In order to keep your DGX A100 running smoothly, allow up to a minute of idle time after reaching the login prompt. This ensures that all components are able to complete their initialization.

4.4.2 Shutdown Considerations

WARNING: Risk of Danger - Removing power cables or using Power Distribution Units (PDUs) to shut off the system while the Operating System is running may cause damage to sensitive components in the DGX A100 server.

When shutting down DGX A100, always initiate the shutdown from the operating system, momentary press of the power button, or by using Graceful Shutdown from the BMC, and wait until the system enters a powered-off state before performing any maintenance.
4.5 Verifying Functionality - Quick Health Check

NVIDIA provides customers a diagnostics and management tool called NVIDIA System Management, or NVSM. The nvsm command can be used to determine the system’s health, identify component issues and alerts, or run a stress test to make sure all components are in working order while under load. The use of Docker is key to getting the most performance out of the system since NVIDIA has optimized containers for all the major frameworks and workloads used on DGX systems.

The following are the steps for performing a health check on the DGX A100 System, and verifying the Docker and NVIDIA driver installation.

1. Establish an SSH connection to the DGX A100 System.
2. Run a basic system check.

$$
sudo nvsm show health
$$

Verify that the output summary shows that all checks are Healthy and that the overall system status is Healthy.

3. Verify that Docker is installed by viewing the installed Docker version.

$$
sudo docker --version
$$

This should return the version as “Docker version 19.03.5-ce”, where the actual version may differ depending on the specific release of the DGX OS Server software.

4. Verify connection to the NVIDIA repository and that the NVIDIA Driver is installed.

$$
sudo docker run --gpus all --rm nvcr.io/nvidia/cuda:11.0-base nvidia-smi
$$

Docker pulls the nvidia/cuda container image layer by layer, then runs nvidia-smi.

When completed, the output should show the NVIDIA Driver version and a description of each installed GPU.

See the NVIDIA Containers and Deep Learning Frameworks User Guide at https://docs.nvidia.com/deeplearning/dgx/user-guide/index.html for further instructions, including an example of logging into the NGC container registry and launching a deep learning container.
4.6 Running a “Pre-Flight” Stress Test

NVIDIA recommends running the pre-flight stress test before putting a system into a production environment or after servicing. You can specify running the test on the GPUs, CPU, memory, and storage, and also specify the duration of the tests.

To run the tests, use NVSM.

Syntax:

```
$sudo nvsm stress-test [--usage] [--force] [--no-prompt] [<test>...] [DURATION]
```

Getting Help

For help on running the test, issue the following.

```
$sudo nvsm stress-test --usage
```

Recommended Test to Run:

The following command tests all components (GPU, CPU, memory, storage) and takes about 20 minutes to complete:

```
$sudo nvsm stress-test --force
```
### 4.7 Running NGC Containers with GPU Support

To obtain the best performance when running NGC containers on DGX A100 systems, two methods of providing GPU support for Docker containers have been developed:

- Native GPU support (included in Docker 19.03 and later)
- NVIDIA Container Runtime for Docker (nvidia-docker2 package)

The method implemented in your system depends on the DGX OS version installed.

<table>
<thead>
<tr>
<th>DGX OS Release</th>
<th>Method included</th>
</tr>
</thead>
</table>
| 5.0           | Native GPU support  
NVIDIA Container Runtime for Docker (deprecated - availability to be removed in a future DGX OS release) |
| 4.99          | Native GPU support  
NVIDIA Container Runtime for Docker (deprecated - availability to be removed in a future DGX OS release) |

Each method is invoked by using specific Docker commands, described as follows.

#### 4.7.1 Using Native GPU Support

Use `docker run --gpus` to run GPU-enabled containers.

- **Example using all GPUs**

  ```
  $ sudo docker run --gpus all ...
  ```

- **Example using two GPUs**

  ```
  $ sudo docker run --gpus 2 ...
  ```

- **Examples using specific GPUs**

  ```
  $ sudo docker run --gpus "device=1,2" ...
  $ sudo docker run --gpus "device=UUID-ABCDEF,1" ...
  ```
4.7.2 Using the NVIDIA Container Runtime for Docker

Note: The NVIDIA Container Runtime for Docker is deprecated and will be removed from the DGX OS in a future release.

Currently, the DGX OS also includes the NVIDIA Container Runtime for Docker (nvidia-docker2) which lets you run GPU-accelerated containers in one of the following ways.

► Use `docker run` and specify `runtime=nvidia`.

```
$ docker run --runtime=nvidia ...
```

► Use `nvidia-docker run`.

```
$ nvidia-docker run ...
```

The `nvidia-docker2` package provides backward compatibility with the previous `nvidia-docker` package, so you can run GPU-accelerated containers using this command and the new runtime will be used.

► Use `docker run` with `nvidia` as the default runtime.

You can set `nvidia` as the default runtime, for example, by adding the following line to the `/etc/docker/daemon.json` configuration file as the first entry.

```json
"default-runtime": "nvidia",
```

The following is an example of how the added line appears in the JSON file. Do not remove any pre-existing content when making this change.

```json
{
 "default-runtime": "nvidia",
 "runtimes": {
  "nvidia": {
   "path": "/usr/bin/nvidia-container-runtime",
   "runtimeArgs": []
  }
 }
}
```

You can then use `docker run` to run GPU-accelerated containers.
$ docker run ... 

**CAUTION:** If you build Docker images while `nvidia` is set as the default runtime, make sure the build scripts executed by the Dockerfile specify the GPU architectures that the container will need. Failure to do so may result in the container being optimized only for the GPU architecture on which it was built. Instructions for specifying the GPU architecture depend on the application and are beyond the scope of this document. Consult the specific application build process for guidance.
4.8 Managing CPU Mitigations

DGX OS Server includes security updates to mitigate CPU speculative side-channel vulnerabilities. These mitigations can decrease the performance of deep learning and machine learning workloads.

If your installation of DGX systems incorporates other measures to mitigate these vulnerabilities, such as measures at the cluster level, you can disable the CPU mitigations for individual DGX nodes and thereby increase performance.

4.8.1 Determining the CPU Mitigation State of the DGX System

If you do not know whether CPU mitigations are enabled or disabled, issue the following.

```
cat /sys/devices/system/cpu/vulnerabilities/*
```

- CPU mitigations are enabled if the output consists of multiple lines prefixed with `Mitigation`.
  
  Example

  ```
  KVM: Mitigation: Split huge pages
  Mitigation: PTE Inversion; VMX: conditional cache flushes, SMT vulnerable
  Mitigation: Clear CPU buffers; SMT vulnerable
  Mitigation: PTI
  Mitigation: Speculative Store Bypass disabled via prctl and seccomp
  Mitigation: usercopy/swapgs barriers and __user pointer sanitization
  Mitigation: Full generic retpoline, IBPB: Conditional, IBRS_FW, STIBP: conditional, RSB filling
  Mitigation: Clear CPU buffers; SMT vulnerable
  ```

- CPU mitigations are disabled if the output consists of multiple lines prefixed with `Vulnerable`.
  
  Example

  ```
  KVM: Vulnerable
  Mitigation: PTE Inversion; VMX: vulnerable
  Vulnerable; SMT vulnerable
  Vulnerable
  Vulnerable
  Vulnerable; __user pointer sanitization and usercopy barriers only; no swapgs barriers
  Vulnerable, IBPB: disabled, STIBP: disabled
  Vulnerable
  ```
### 4.8.2 Disabling CPU Mitigations

CAUTION: Performing the following instructions will disable the CPU mitigations provided by the DGX OS Server software.

1. Install the `nv-mitigations-off` package.
   
   ```bash
   sudo apt install nv-mitigations-off -y
   ```

2. Reboot the system.

3. Verify CPU mitigations are disabled.
   
   ```bash
   cat /sys/devices/system/cpu/vulnerabilities/*
   ```
   
   The output should include several Vulnerable lines. See “Determining the CPU Mitigation State of the DGX System” for example output.

### 4.8.3 Re-enabling CPU Mitigations

1. Remove the `nv-mitigations-off` package.
   
   ```bash
   sudo apt purge nv-mitigations-off
   ```

2. Reboot the system.

3. Verify CPU mitigations are enabled.
   
   ```bash
   cat /sys/devices/system/cpu/vulnerabilities/*
   ```
   
   The output should include several Mitigations lines. See “Determining the CPU Mitigation State of the DGX System” for example output.
Chapter 5.  Additional Features and Instructions

This chapter describes specific features of the DGX A100 server to consider during setup and operation.

5.1 Managing the DGX Crash Dump Feature

The DGX OS includes a script to manage this feature.

5.1.1 Using the Script

To enable only dmesg crash dumps, enter

```
$ /usr/sbin/dgx-kdump-config enable-dmesg-dump
```

This option reserves memory for the crash kernel.

To enable both dmesg and vmcore crash dumps, enter

```
$ /usr/sbin/dgx-kdump-config enable-vmcore-dump
```

This option reserves memory for the crash kernel.

To disable crash dumps, enter

```
$ /usr/sbin/dgx-kdump-config disable
```

This option disables the use of kdump and make sure no memory is reserved for the crash kernel.
5.1.2 Connecting to Serial Over LAN to View the Console

While dumping vmcore, the BMC screen console goes blank approximately 11 minutes after the crash dump is started. To view the console output during the crash dump, connect to serial over LAN as follows:

```
$ ipmitool -I lanplus -H <bmc-ip-address> -U <BMC-USERNAME> -P <BMC-PASSWORD> sol activate
```
Chapter 6. Managing the DGX A100 Self-Encrypting Drives

The NVIDIA DGX™ OS software supports the ability to manage self-encrypting drives (SEDs), including setting an Authentication Key for locking and unlocking the drives on NVIDIA DGX™ A100 systems. You can manage only the SED data drives. The software cannot be used to manage OS drives even if they are SED-capable.

6.1 Overview

The self-encrypting drive (SED) management software is provided in the `nv-disk-encrypt` package.

The software supports the following configurations.

- NVIDIA DGX A100 systems where all data drives are self-encrypting drives.
- Only SEDs used as data drives are supported. The software will not manage SEDs that are OS drives.

The software provides the following functionality.

- Identifies eligible drives on the system.
- Lets you assign Authentication Keys (passwords) for each SED as part of the initialization process.
  - Alternatively, the software can generate random passwords for each drive.
  - The passwords are stored in a password-protected vault on the system.
- Once initialized, SEDs are locked upon power loss, such as a system shutdown or drive removal.
  Locked drives get unlocked after power is restored and the root file system is mounted.
- Provides functionality to export the vault.
- Provides functionality for erasing the drives.
- Provides the ability to revert the initialization.
6.2 Installing the Software

Use the package manager to install the `nv-disk-encrypt` package (and, optionally, the TPM2 tools package) and then reboot the system. The TPM tools package is needed if you intend to use the TPM2 for storage of security keys.

1. Update the packages

   ```
   $ sudo apt update
   ```

2. Install `nv-disk-encrypt`.

   ```
   $ sudo apt install -y nv-disk-encrypt
   ```

3. [Optional] Install `tpm2-tools`.

   ```
   $ sudo apt install -y tpm2-tools
   ```

4. Reboot

   ```
   $ sudo reboot
   ```

If you will use TPM2, be sure to enable it. See the instructions at “Enabling the TPM”.

6.3 Initializing the System for Drive Encryption

Initialize the system for drive encryption using the `nv-disk-encrypt` command.

**Syntax**

```
$ sudo nv-disk-encrypt init [-k <your-vault-password>] [-f <path/to/json-file>] [-g] [-r]
```

**Options:**

Note: Before initializing drive encryption, review the information in the section “Configuring Trusted Computing” and then follow the configuration instructions if needed.
• `-k`: Lets you create the vault password within the command. Otherwise, the software will prompt you to create a password before proceeding.

• `-f`: Lets you specify a JSON file that contains a mapping of passwords to drives. See “Example 1: Passing in the JSON File” for further instructions.

• `-g`: Generates random salt values (stored in `/etc/nv-disk-encrypt/.dgxenc.salt`) for each drive password. NVIDIA strongly recommends using this option for best security, otherwise the software will use a default salt value instead of a randomly generated one.

• `-r`: Generates random passwords for each drive. This avoids the need to create a JSON file or the need to enter a password one by one during the initialization.

### 6.4 Enabling Drive Locking

After initializing the system for SED management, use the `nv-disk-encrypt` command to enable drive locking by issuing the following.

```
sudo nv-disk-encrypt lock
```

After initializing the system and enabling drive locking, the drives will become locked when they lose power. The system will automatically unlock each drive when power is restored to the system and the system is rebooted.

### 6.5 Initialization Examples

#### 6.5.1 Example 1: Passing in the JSON File

The following instructions describe a method for specifying the drive/password mapping ahead of time. This method is useful for initializing several drives at a time and avoids the need to enter the password for each drive after issuing the initialization command, or if you want control of the passwords.

#### 6.5.1.1 Determining Which Drives Can be Managed as Self-Encrypting

Review the storage layout of the DGX system to determine which drives are eligible to be managed as SEDs.

```
sudo nv-disk-encrypt info
```
The default output shows which drives can be used for encryption and which drives cannot. The following status information is provided:

- SED capable: Is this a self-encrypting drive?
- Boot disk: Is this drive currently being used as a boot drive? Does it contain the root filesystem?
- Locked: Is this drive currently in the locked state? Is it able to accept I/O? It can only be in this state after
  - locking has been enabled (nv-disk-encrypt init, followed by nv-disk-encrypt lock)
  - the drive is coming back from power-off
  - the user queries this state prior to it being (automatically) unlocked
- Lock Enabled: Are locks enabled on this drive? It will be in this state after initialization (nv-disk-encrypt init).
- MBR done: This setting is only relevant for drives that support MBR shadowing. On drives that support this feature, this will report 'Y' after initialization (nv-disk-encrypt init).

The following example output snippet shows drives than can be used for encryption. Notice SED capable = Y and Boot disk = N.

<table>
<thead>
<tr>
<th>Name</th>
<th>Serial</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>/dev/nvme3n1</td>
<td>xxxxx1</td>
<td>SED capable = Y, Boot disk = N, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
<tr>
<td>/dev/nvme6n1</td>
<td>xxxxx2</td>
<td>SED capable = Y, Boot disk = N, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
<tr>
<td>/dev/nvme9n1</td>
<td>xxxxx3</td>
<td>SED capable = Y, Boot disk = N, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
</tbody>
</table>

The following example output snippet shows drives than cannot be used for encryption. Notice SED capable = Y and Boot disk = Y, or SED capable = N.

<table>
<thead>
<tr>
<th>Name</th>
<th>Serial</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>/dev/nvme0n1</td>
<td>xxxxx1</td>
<td>SED capable = Y, Boot disk = Y, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
<tr>
<td>/dev/sr0</td>
<td>xxxxx2</td>
<td>SED capable = N, Boot disk = N, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
<tr>
<td>/dev/nvme1n1</td>
<td>xxxxx3</td>
<td>SED capable = Y, Boot disk = Y, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
<tr>
<td>/dev/sda</td>
<td>unknown</td>
<td>SED capable = N, Boot disk = N, Locked = N, Lock Enabled = N, MBR done = N</td>
</tr>
</tbody>
</table>

Alternatively, you can specify the output be presented in JSON format by using the -j option.

```bash
$ sudo nv-disk-encrypt info -j
```

In this case, drives that can be used for encryption are indicate by

```
"sed_capable": true,
"used_for_boot": false
```

And drives that cannot be used for encryption are indicated by either
“sed_capable”: true,
“used_for_boot”: true

Or

“sed_capable”: false,

6.5.1.2 Creating the Drive/Password Mapping JSON File and Using it to Initialize the System

1. Create a JSON file that lists all the eligible SED-capable drives that you want to manage.

   These are the list of drives that you obtained from the section “Determining Which Drives Can be Managed as Self-Encrypting”.

   The following example shows the format of the JSON file.

   ```json
   {
     "/dev/nvme2n1": "<your-password>",
     "/dev/nvme3n1": "<your-password>",
     "/dev/nvme4n1": "<your-password>",
     "/dev/nvme5n1": "<your-password>",
   }
   ```

   • Be sure to follow the syntax exactly.

   • Passwords must consist of only upper-case letters, lower-case letters, digits, and/or the following special-characters: ~ : @ % ^ + = _ ,

2. Initialize the system and then enable locking.

   The following command assumes you have placed the JSON file in the /tmp directory.

   ```sh
   sudo nv-disk-encrypt init -f /tmp/<your-file>.json -g
   sudo nv-disk-encrypt lock
   ```

   Provide a password for the vault when prompted.

   Passwords must consist of only upper-case letters, lower-case letters, digits, and/or the following special-characters: ~ : @ % ^ + = _ ,

3. Delete the JSON file in the temporary location for security.

6.5.2 Example 2: Generating Random Passwords

The following commands uses the -k and -r options so that you are not prompted to enter passwords. You pass the vault password into the command and then the command instructs the tool to generate random passwords for each drive.

The vault password must consist of only upper-case letters, lower-case letters, digits, and/or the following special-characters: ~ : @ % ^ + = _ ,

```sh
sudo nv-disk-encrypt init -k <your-vault-password> -g -r
```
6.5.3 Example 3: Specifying Passwords One at a Time When Prompted

If there are a small number of drives or you don't want to create a JSON file, issue the following.

```
$ sudo nv-disk-encrypt init -g
$ sudo nv-disk-encrypt lock
```

The software prompts you to enter a password for the vault, and then a password for each eligible SED.

Passwords must consist of only upper-case letters, lower-case letters, digits, and/or the following special-characters: `~ : @ % ^ + = _ ,`

6.6 Disabling Drive Locking

You can disable drive locking at any time after initialization by issuing the following.

```
$ sudo nv-disk-encrypt disable
```

- This command disables locking on all drives.
- You can re-run the initial setup at any time after this.

6.7 Exporting the Vault

To export all drive keys out to a file, use the export function. This requires that you pass in the vault password.

```
$ sudo nv-disk-encrypt export -k <your-vault-password>
```

Writing vault data to `/tmp/secrets.out`

The `/tmp/secrets.out` file will contain the mapping of disk serial numbers to drive passwords.
6.8 Erasing your Data

After initializing the system for SED management, use the `nv-disk-encrypt` command to erase data on your drives after stopping cachefilesd and unmounting the RAID array as follows.

1. Fully stop the RAID.

```
$ systemctl stop cachefilesd
```

```
$ sudo umount /raid
```

```
$ sudo mdadm --stop /dev/md1
```

2. Perform the erase.

```
$ sudo nv-disk-encrypt erase
```

This command
- Sets the drives in an unlocked state
- Disables locking on the drives
- Removes the RAID 0 array configuration

To rebuild the RAID array, issue the following.

```
$ sudo /usr/bin/configure_raid_array.py -c -f
```

6.9 Configuring Trusted Computing

The DGX A100 system BIOS provides setup controls for configuring the following Trusted Computing (TC) features:

- **Trusted Platform Module**
  The NVIDIA DGX A100 incorporates Trusted Platform Module 2.0 (TPM 2.0) which can be enabled from the system BIOS. Once enabled, the `nv-disk-encrypt` tool uses the module for encryption and storage of the vault and SED authentication keys. Using the TPM is preferred because that allows the vault data to persist even if the system gets re-imaged.
6.9.1 Enabling the TPM

This section provided instructions for enabling the TPM.

1. Reboot the DGX A100, then press [Del] or [F2] at the NVIDIA splash screen to enter the BIOS Setup.
2. Navigate to the Advanced tab on the top menu, then scroll to Trusted Computing and press [Enter].
   • To enable TPM, scroll to Security Device and switch the setting to Enabled.
3. Save and exit the BIOS Setup to continue the boot process.

After the system boots you can proceed to initialize drive encryption.

6.9.2 Clearing the TPM

If you’ve lost the password to your TPM, you will not be able to access its contents. In this case, the only way to regain access to the TPM is to clear the TPM’s contents. After clearing the TPM, you will need to re-initialize the vault and SED authentication keys.

To clear the TPM, do the following.

1. Reboot the DGX A100, then press [Del] or [F2] at the NVIDIA splash screen to enter the BIOS Setup.
2. Navigate to the Advanced tab on the top menu, then scroll to Trusted Computing and press [Enter].
   a. Scroll to Trusted Computing and press [Enter].
   b. Scroll to Pending Operation and press [Enter].
   c. Select TPM Clear at the Pending Operation popup, then press [Enter].
4. Save and exit the BIOS Setup.

6.10 Changing Disk Passwords, Adding Disks, or Replacing Disks

The same steps are needed for changing or rotating passwords, adding disks, or replacing disks.

1. Disable SED management.

```
$ sudo nv-disk-encrypt disable
```

2. Add or replace drives as needed and then rebuild the RAID array.

Refer to the NVIDIA DGX A100 Service Manual for instructions.
3. Enable SED management and assign passwords per the instructions in “Initializing the System for Drive Encryption”.

6.11 Recovering From Lost Keys

NVIDIA recommends backing up your keys and storing them in a secure location. If you’ve lost the key used to initialize and lock your drives, you will not be able to unlock the drive again. If this happens, the only way to recover is to perform a factory-reset, which will result in a loss of data.

- SED drives come with a PSID printed on the label; this value can only be obtained by physically examining the drive as exemplified in the following image.

Specify the PSID to reset the drive using the following `sedutil-cli` command:

```
$ sudo sedutil-cli --yesIreallywanttoERASEALLmydatausingthePSID <your-drive-PSID> /dev/nvme3n1
```
Chapter 7. Network Configuration

This chapter describes key network considerations and instructions for the DGX A100 System.

7.1 Configuring Network Proxies

If your network requires use of a proxy server, you will need to set up configuration files to ensure the DGX A100 System communicates through the proxy.

7.1.1 For the OS and Most Applications

Edit the file `/etc/environment` and add the following proxy addresses to the file, below the PATH line.

```
http_proxy="http://<username>:<password>@<host>:<port>/"
ftp_proxy="ftp://<username>:<password>@<host>:<port>/";
https_proxy="https://<username>:<password>@<host>:<port>/";
no_proxy="localhost,127.0.0.1,localaddress,.localdomain.com"
HTTP_PROXY="http://<username>:<password>@<host>:<port>/"
FTP_PROXY="ftp://<username>:<password>@<host>:<port>/";
HTTP_PROXY="https://<username>:<password>@<host>:<port>/";
NO_PROXY="localhost,127.0.0.1,localaddress,.localdomain.com"
```

Where username and password are optional.

Example:

```
http_proxy="http://myproxy.server.com:8080/"
ftp_proxy="ftp://myproxy.server.com:8080/";
https_proxy="https://myproxy.server.com:8080/";
```

7.1.2 For apt

Edit (or create) a proxy config file `/etc/apt/apt.conf.d/myproxy` and include the following lines:

```
Acquire::http::proxy "http://<username>:<password>@<host>:<port>/";
Acquire::ftp::proxy "ftp://<username>:<password>@<host>:<port>/";
Acquire::https::proxy "https://<username>:<password>@<host>:<port>/";
```

Where username and password are optional.

Example:

```
Acquire::http::proxy "http://myproxy.server.com:8080/"
Acquire::ftp::proxy "ftp://myproxy.server.com:8080/";
Acquire::https::proxy "https://myproxy.server.com:8080/";
```
Where username and password are optional.

Example:

```
Acquire::http::proxy "http://myproxy.server.com:8080/";
Acquire::ftp::proxy "ftp://myproxy.server.com:8080/>";
Acquire::https::proxy "https://myproxy.server.com:8080/";
```

### 7.1.3 For Docker

To ensure that Docker can access the NGC container registry through a proxy, Docker uses environment variables. For best practice recommendations on configuring proxy environment variables for Docker, see [https://docs.docker.com/engine/admin/systemd/#http-proxy](https://docs.docker.com/engine/admin/systemd/#http-proxy).

### 7.2 Configuring Docker IP Addresses

To ensure that the DGX A100 system can access the network interfaces for Docker containers, Docker should be configured to use a subnet distinct from other network resources used by the DGX A100 System.

By default, Docker uses the `172.17.0.0/16` subnet. Consult your network administrator to find out which IP addresses are used by your network. **If your network does not conflict with the default Docker IP address range, then no changes are needed and you can skip this section.**

However, if your network uses the addresses within this range for the DGX A100 system, you should change the default Docker network addresses.

You can change the default Docker network addresses by either modifying the `/etc/docker/daemon.json` file or modifying the `/etc/systemd/system/docker.service.d/docker-override.conf` file. These instructions provide an example of modifying the `/etc/systemd/system/docker.service.d/docker-override.conf` to override the default Docker network addresses.

1. **Open the docker-override.conf file for editing.**

   ```bash
   $ sudo vi /etc/systemd/system/docker.service.d/docker-override.conf
   
   [Service]
   ExecStart=/usr/bin/dockerd -H fd:// -s overlay2
   LimitMEMLOCK=infinity
   LimitSTACK=67108864
   
   2. **Make the changes indicated in bold below, setting the correct bridge IP address and IP address ranges for your network. Consult your IT administrator for the correct addresses.**

   ```bash
   [Service]
   ExecStart=/usr/bin/dockerd -H fd:// -s overlay2 --bip=192.168.127.1/24
              --fixed-cidr=192.168.127.128/25
   LimitMEMLOCK=infinity
   LimitSTACK=67108864
   ```
Save and close the /etc/systemd/system/docker.service.d/docker-override.conf file when done.

3. Reload the systemctl daemon.

```bash
$ sudo systemctl daemon-reload
```

4. Restart Docker.

```bash
$ sudo systemctl restart docker
```

### 7.3 Opening Ports

Make sure that the ports listed in the following table are open and available on your firewall to the DGX A100 System:

**Table 7.1**

<table>
<thead>
<tr>
<th>Port (Protocol)</th>
<th>Direction</th>
<th>Use</th>
</tr>
</thead>
<tbody>
<tr>
<td>22 [TCP]</td>
<td>Inbound</td>
<td>SSH</td>
</tr>
<tr>
<td>53 [UDP]</td>
<td>Outbound</td>
<td>DNS</td>
</tr>
<tr>
<td>80 [TCP]</td>
<td>Outbound</td>
<td>HTTP, package updates</td>
</tr>
<tr>
<td>443 [TCP]</td>
<td>Outbound</td>
<td>For internet [HTTP/HTTPS] connection to NVIDIA GPU Cloud</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If port 443 is proxied through a corporate firewall, then WebSocket protocol traffic must be supported</td>
</tr>
<tr>
<td>443 [TCP]</td>
<td>Inbound</td>
<td>For BMC web services, remote console services, and cd-media service.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>If port 443 is proxied through a corporate firewall, then WebSocket protocol traffic must be supported</td>
</tr>
</tbody>
</table>
7.4 Connectivity Requirements for NGC Containers

To run NVIDIA NGC containers from the NGC container registry, your network must be able to access the following URLs:

- http://security.ubuntu.com/ubuntu/
- http://international.download.nvidia.com/dgx/repos/
  (To be accessed using apt-get, not through a browser.)
- https://apt.dockerproject.org/repo/
- https://download.docker.com/linux/ubuntu/
- https://nvcr.io/

To verify connection to nvcr.io, run

```
$ wget https://nvcr.io/v2
```

You should see connecting verification followed by a 401 error.

```
Resolving nvcr.io (nvcr.io)... 52.8.131.152, 52.9.8.8
Connecting to nvcr.io (nvcr.io)|52.8.131.152|:443... connected.
HTTP request sent, awaiting response... 401 Unauthorized
```

7.5 Configuring Static IP Address for the BMC

This section explains how to set a static IP address for the BMC. You will need to do this if your network does not support DHCP.

Use one of the methods described in the following sections:

- “Configuring a BMC Static IP Address Using ipmitool”
- “Configuring a BMC Static IP Address Using the System BIOS”
7.5.1 Configuring a BMC Static IP Address Using ipmitool

This section describes how to set a static IP address for the BMC from the Ubuntu command line.

To view the current settings, enter the following command.

```bash
$ sudo ipmitool lan print 1
```

To set a static IP address for the BMC, do the following.

1. Set the IP address source to static.

```bash
$ sudo ipmitool lan set 1 ipsrc static
```

2. Set the appropriate address information.

   - To set the IP address ("Station IP address" in the BIOS settings), enter the following and replace the italicized text with your information.

     ```bash
     $ sudo ipmitool lan set 1 ipaddr <my-ip-address>
     ```

   - To set the subnet mask, enter the following and replace the italicized text with your information.

     ```bash
     $ sudo ipmitool lan set 1 netmask <my-netmask-address>
     ```

   - To set the default gateway IP ("Router IP address" in the BIOS settings), enter the following and replace the italicized text with your information.

     ```bash
     $ sudo ipmitool lan set 1 defgw ipaddr <my-default-gateway-ip-address>
     ```

Note: If you cannot access the DGX A100 System remotely, then connect a display (1440x900 or lower resolution) and keyboard directly to the DGX A100 system.
Chapter 7. Network Configuration

7.5.2 Configuring a BMC Static IP Address Using the System BIOS

This section describes how to set a static IP address for the BMC when you cannot access the DGX A100 System remotely. This process involves setting the BMC IP address during system boot.

1. Connect a keyboard and display (1440 x 900 maximum resolution) to the DGX A100 System, then turn on the DGX A100 System.

2. When you see the SBIOS version screen, press Del or F2 to enter the BIOS Setup Utility screen.

3. At the BIOS Setup Utility screen, navigate to the Server Mgmt tab on the top menu, then scroll to BMC network configuration and press Enter.

4. Scroll to Configuration Address Source and press Enter, then at the Configuration Address source pop-up, select Static and then press Enter.

5. Set the addresses for the Station IP address, Subnet mask, and Router IP address as needed by performing the following for each:
   a. Scroll to the specific item and press Enter.
   b. Enter the appropriate information at the pop-up, then press Enter.

6. When finished making all your changes, press F10 to save & exit.
7.6 Configuring Static IP Addresses for the Network Ports

During the initial boot setup process for the DGX A100 System, you had an opportunity to configure static IP addresses for a single network interface. If you did not set this up at that time, you can configure the static IP addresses from the Ubuntu command line using the following instructions.

1. Determine the port designation that you want to configure, based on the physical Ethernet port that you have connected to your network.

   See the section “Configuring Network Proxies” for the port designation of the connection you want to configure.

2. Edit the network configuration yaml file.

   $ sudo vi /etc/netplan/01-netcfg.yaml

   ```yaml
   network:
     version: 2
     renderer: networkd
     ethernets:

       <port-designation>:
         dhcp4: no
         dhcp6: no
         addresses: [10.10.10.2/24]
         gateway4: 10.10.10.1
         nameservers:
           search: [<mydomain>, <other-domain>]
           addresses: [10.10.10.1, 1.1.1.1]
   ```

   Consult your network administrator for the appropriate information for the items in bold, such as network, gateway, and nameserver addresses, and use the port designations that you determined in step 1.

3. When finished with your edits, press ESC to switch to command mode, then save the file to the disk and exit the editor.

4. Apply the changes.
Chapter 7. Network Configuration

$ sudo netplan apply

For additional information, see https://help.ubuntu.com/lts/serverguide/network-configuration.html.en.

7.7 Switching Between InfiniBand and Ethernet

The NVIDIA DGX A100 System is equipped with eight Mellanox ConnectX-6 single-port network cards on the I/O board, typically used for cluster communications. By default these are configured as InfiniBand ports, but you have the option to convert these to Ethernet ports.

For these changes to work properly, the configured port must connect to a networking switch that matches the port configuration. In other words, if the port configuration is set to InfiniBand, then the external switch should be an InfiniBand switch with the corresponding InfiniBand cables. Likewise, if the port configuration is set to Ethernet, then the switch should also be Ethernet.

The DGX A100 is also equipped with one (and optionally two) dual-port connections typically used for network storage and configured by default for Ethernet. These can be configure for InfiniBand as well.

Note: On the dual-port cards, if one of the ports is configured for Ethernet and the other port is configured for InfiniBand, the following limitations apply.

- FDR is not supported on the InfiniBand port (port 1 or 2).
- If port 1 is InfiniBand, then port 2 (Ethernet) does not support 40 GbE/10GbE.
- If port 1 is Ethernet, then port 2 (InfiniBand) does not support EDR.

7.7.1 Starting the Mellanox Software Tools and Determining the Current Port Configuration

Make sure that the Mellanox Software Tools services are started.

$ sudo mst start

To determine the current port configuration, enter the following:
The following example shows the output for one of the port devices, showing the device path and the default, current, and next boot configuration.

<table>
<thead>
<tr>
<th>Device #2:</th>
<th>ConnectX6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device:</td>
<td>/dev/mst/mt4123_pciconf8</td>
</tr>
<tr>
<td>Configurations:</td>
<td>Default</td>
</tr>
<tr>
<td>* LINK_TYPE_P1</td>
<td>IB(1)</td>
</tr>
</tbody>
</table>

- **IB(1)** indicates the port is configured for InfiniBand.
- **ETH(2)** indicates the port is configured for Ethernet.

Determine the Device path bus numbers for the slot number of the port you want to configure. See the diagram and table in “Configuring Network Proxies” for the mapping.

### 7.7.2 Switching the Port Configuration

Make sure that you have started the Mellanox Software Tools (MST) services as explain in the section “Starting the Mellanox Software Tools and Determining the Current Port Configuration”, and have identified the correct ports to change.

Issue `mlxconfig` for each port you want to configure.

**Syntax:**

```
$ sudo mlxconfig -y -d <device-path> set LINK_TYPE_P1=<config-number>
```

- `<device-path>` corresponds to the port you want to configure
- `<config-number>` is ‘1’ for InfiniBand and ‘2’ for Ethernet.

**Example setting slot 0 to Ethernet**

```
$ sudo mlxconfig -y -d /dev/mst/mt4123_pciconf2 set LINK_TYPE_P1=2
```

**Example setting slot 1 to InfiniBand**

```
$ sudo mlxconfig -y -d /dev/mst/mt4123_pciconf3 set LINK_TYPE_P1=1
```
Chapter 8. Configuring Storage

By default, the DGX A100 System includes four SSDs in a RAID 0 configuration. These SSDs are intended for application caching, so you must set up your own NFS storage for long term data storage. The following instructions describe how to mount the NFS onto the DGX A100 System, and how to cache the NFS using the DGX A100 SSDs for improved performance.

Disabling cachefilesd

The DGX A100 system uses cachefilesd to manage caching of the NFS. If you do not want cachefilesd enabled, you can disable it as follows.

```
$ sudo systemctl stop cachefilesd
$ sudo systemctl disable cachefilesd
```

Using cachefilesd

The following instructions describe how to mount the NFS onto the DGX A100 system, and how to cache the NFS using the DGX A100 SSDs for improved performance.

Make sure that you have an NFS server with one or more exports with data to be accessed by the DGX A100 System, and that there is network access between the DGX A100 System and the NFS server.

1. Configure an NFS mount for the DGX A100 System.
   a. Edit the filesystem tables configuration.

```
$ sudo vi /etc/fstab
```

b. Add a new line for the NFS mount, using the local mount point of /mnt.

```
<nfs_server>:<export_path> /mnt nfs
rw,noatime,rsize=32768,wsize=32768,nolock,tcp,intr,fsc,nofail 0 0
```

   > /mnt is used here as an example mount point.

   > Consult your Network Administrator for the correct values for <nfs_server> and <export_path>. 

The nfs arguments presented here are a list of recommended values based on typical use cases. However, “fsc” must always be included as that argument specifies use of FS-Cache.

c. Save the changes.

2. Verify the NFS server is reachable.

```
$ ping <nfs_server>
```

Use the server IP address or the server name provided by your network administrator.

3. Mount the NFS export.

```
$ sudo mount /mnt
```

/mnt is an example mount point.

4. Verify caching is enabled.

```
$ cat /proc/fs/nfsfs/volumes
```

Look for the text FSC=yes in the output.

The NFS will be mounted and cached on the DGX A100 System automatically upon subsequent reboot cycles.

8.1 Setting Filesystem Quotas

When running NGC containers you may need to limit the amount of disk space that is used on a filesystem to avoid filling up the partition.

8.2 Switching Between RAID 0 and RAID 5

As supplied from the factory, the RAID level of the DGX A100 RAID array is RAID 0. RAID 0 provides the maximum storage capacity, but does not provide any redundancy. If a single SSD in the array fails, all data stored on the array is lost. If you are willing to accept reduced capacity in return for some level of protection against failure of a single SSD, you can change the level of the RAID array to RAID 5. If you change the RAID level from RAID 0 to RAID 5, the total storage capacity of the RAID array is reduced.

Before changing the RAID level of the DGX A100 RAID array, back up all data on the array that you want to preserve. Changing the RAID level of the DGX A100 RAID array erases all data stored on the array.

The DGX A100 software includes the custom script configure_raid_array.py, which you can use to change the level of the RAID array without unmounting the RAID volume.

To change the RAID level to RAID 5, run the following command:

```
$ sudo configure_raid_array.py -m raid5
```

After you change the RAID level to RAID 5, the RAID array is rebuilt. A RAID array that is being rebuilt is online and ready to be used, but a check on the health of the DGX system reports the status of the RAID volume as unhealthy.

The time required to rebuild the RAID array depends on the workload on the system. On an idle system, the rebuild might be complete within 30 minutes.

To change the RAID level to RAID 0, run the following command:

```
$ sudo configure_raid_array.py -m raid0
```

To confirm that the RAID level was changed as required, run the `lsblk` command. The entry in the TYPE column for each SSD in the RAID array indicates the RAID level of the array.
8.3 Configuring Support for Custom Drive Partitioning

DGX A100 systems incorporate data drives configured as RAID 0 by default. You can alter the default configuration by adding or removing drives, or by switching between a RAID 0 configuration and a RAID 5 configuration. If you alter the default configuration, you must let NVSM know so that the utility does not flag the configuration as an error, and so that NVSM can continue to monitor the health of the drives.

To configure NVSM to support a custom drive partitioning perform the following.

1. Edit `/etc/nvsm/nvsm.config` and set the `"use_standard_config_storage"` parameter to `false`

   ```json
   "use_standard_config_storage":false
   ```

2. Restart NVSM.

   `$ systemctl restart nvsm`

Remember to set the parameter back to true if you restore the drive partition back to the default configuration.
Chapter 9. Updating and Restoring the Software

9.1 Updating the DGX A100 Software

You must register your DGX A100 system in order to receive email notification whenever a new software update is available.

These instructions explain how to update the DGX A100 software through an internet connection to the NVIDIA public repository. The process updates a DGX A100 system image to the latest released versions of the entire DGX A100 software stack, including the drivers, for the latest version within a specific release; for example, to update to the latest Release 4.99 update from an earlier Release 4.99 version.

For instructions on upgrading from one Release to another (for example, from Release 4 to Release 5), consult the DGX OS 5 User Guide.

9.1.1 Connectivity Requirements For Software Updates

Before attempting to perform the update, verify that the DGX A100 system network connection can access the public repositories and that the connection is not blocked by a firewall or proxy. Enter the following on the DGX A100 system.

```
$ wget -O f1-changelogs http://changelogs.ubuntu.com/meta-release-lts
$ wget -O f4-security http://security.ubuntu.com/ubuntu/dists/bionic/Release
$ wget -O f5-download http://download.docker.com/linux/ubuntu/dists/bionic/Release
$ wget -O f7-focal-repo https://repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/dists/focal/Release
```
All the wget commands should be successful and there should be seven files in the directory with non-zero content.

### 9.1.2 Update Instructions

| CAUTION: These instructions update all software for which updates are available from your configured software sources, including applications that you installed yourself. If you want to prevent an application from being updated, you can instruct the Ubuntu package manager to keep the current version. For more information, see Introduction to Holding Packages on the Ubuntu Community Help Wiki. |

Perform the updates using commands on the DGX A100 console.

1. **Run the package manager.**

   ```
   $ sudo apt update
   ```

2. **Check to see which software will get updated.**

   ```
   $ sudo apt full-upgrade -s
   ```

   To prevent an application from being updated, instruct the Ubuntu package manager to keep the current version. See Introduction to Holding Packages.

3. **Upgrade to the latest version.**

   ```
   $ sudo apt full-upgrade
   ```

   Answer any questions that appear.

   Most questions require a Yes or No response. If asked to select the grub configuration to use, select the current one on the system.

   Other questions will depend on what other packages were installed before the update and how those packages interact with the update. Typically, you can accept the default option when prompted.

4. **Reboot the system.**

### 9.2 Restoring the DGX A100 Software Image

If the DGX A100 software image becomes corrupted (or the OS NVMe drives are replaced), restore the DGX A100 software image to its original factory condition from a pristine copy of the image.

The process for restoring the DGX A100 software image is as follows:

1. **Obtain an ISO file that contains the image from NVIDIA Enterprise Support as explained in “Obtaining the DGX A100 Software ISO Image and Checksum File”**.
Chapter 9. Updating and Restoring the Software

2. Restore the DGX A100 software image from this file either remotely through the BMC or locally from a bootable USB flash drive.

   - If you are restoring the image remotely, follow the instructions in “Re-Imaging the System Remotely”.
   - If you are restoring the image locally, prepare a bootable USB flash drive and restore the image from the USB flash drive as explained in the following topics:
     > Creating a Bootable Installation Medium
     > Re-Imaging the System From a USB Flash Drive

Note: The DGX OS Server software is restored on one of the two NMVe M.2 drives. When the system is booted after restoring the image, software RAID begins the process rebuilding the RAID 1 array - creating a mirror of (or resynchronizing) the drive containing the software. System performance may be affected during the RAID 1 rebuild process, which can take an hour to complete.

9.2.1 Obtaining the DGX A100 Software ISO Image and Checksum File

To ensure that you restore the latest available version of the DGX A100 software image, obtain the current ISO image file from NVIDIA Enterprise Support. A checksum file is provided for the image to enable you to verify the bootable installation medium that you create from the image file.

1. Locate and click the announcement for the latest DGX OS 5 release for your system in the DGX Software Firmware Download Matrix. (Requires an NVIDIA Enterprise Support account)
2. Download the ISO image and its checksum file and save them to your local disk.
   Run a checksum or hash utility on the ISO image and compare the resulting value to the value in the checksum file to validate the ISO file.

9.2.2 Re-Imaging the System Remotely

These instructions describe how to reimage the system remotely through the BMC. For information about how to restore the system locally, see “Re-Imaging the System From a USB Flash Drive”.

Before reimagining the system remotely, ensure that the correct DGX A100 software image is saved to your local disk. For more information, see “Obtaining the DGX A100 Software ISO Image and Checksum File”.

1. Log in to the BMC.
2. Click Remote Control and then click Launch KVM.
3. Set up the ISO image as virtual media.
   a. From the top bar, click Browse File and then locate the re-image ISO file and click Open.
   b. Click Start Media.
4. Reboot, install the image, and complete the DGX A100 system setup.
   a. From the top menu, click Power and then select Reset Server.
   b. Click OK at the Power Control dialogs, then wait for the system to power down and then come back online.
   c. As the system boots, press [F11] when the NVIDIA logo appears to get to the boot menu.
   d. Browse to locate the Virtual CD that corresponds to the inserted ISO, then boot the system from it.
   e. When the system boots up, select one of the following options from the GRUB menu:
      > Install DGX OS <version>: Install DGX OS and reformat data RAID
      > Install DGX OS <version> Without Reformatting Data RAID
      > Advanced Installation Options: Select if you want to install with an encrypted root filesystem, then select one of the following options.
         Install DGX OS <version> With Encrypted Root
         Install DGX OS <version> With Encrypted Root and Without Reformatting Data RAID
      If you are an advanced user who is not using the RAID disks as cache and want to keep data on the RAID disks, then select one of the “Without Reformatting Data RAID” options. See the section “Retaining the RAID Partition While Installing the OS” for more information.
   f. Press Enter.

The DGX A100 system will reboot from ISO image and proceed to install the image. This can take approximately 15 minutes.

Note: The Mellanox InfiniBand driver installation may take up to 30 minutes, depending on how many cards undergo a firmware update.

After the installation is completed, the system ejects the virtual CD and then reboots into the OS.

Refer to “First-Boot Setup” for the steps to take when booting up the DGX A100 system for the first time after a fresh installation.
9.2.3 Creating a Bootable Installation Medium

After obtaining an ISO file that contains the software image from NVIDIA Enterprise Support, create a bootable installation medium, such as a USB flash drive or DVD-ROM, that contains the image.

Note: If you are restoring the software image remotely through the BMC, you do not need a bootable installation medium and you can omit this task.

- If you are creating a bootable USB flash drive, follow the instructions for the platform that you are using:
  - On a text-only Linux distribution, see “Creating a Bootable USB Flash Drive by Using the dd Command”
  - On Windows, see “Creating a Bootable USB Flash Drive by Using Akeio Rufus”
- If you are creating a bootable DVD-ROM, you can use any of the methods described in Burning the ISO on to a DVD on the Ubuntu Community Help Wiki.

9.2.3.1 Creating a Bootable USB Flash Drive by Using the dd Command

On a Linux system, you can use the dd command to create a bootable USB flash drive that contains the DGX A100 software image.

Note: To ensure that the resulting flash drive is bootable, use the dd command to perform a device bit copy of the image. If you use other commands to perform a simple file copy of the image, the resulting flash drive may not be bootable.

Ensure that the following prerequisites are met:

- The correct DGX A100 software image is saved to your local disk. For more information, see “Obtaining the DGX A100 Software ISO Image and Checksum File”.
- The USB flash drive capacity is at least 8 GB.

1. Plug the USB flash drive into one of the USB ports of your Linux system.
2. Obtain the device name of the USB flash drive by running the lsblk command.

   ```sh
   lsblk
   ```
   You can identify the USB flash drive from its size.
3. As root, convert and copy the image to the USB flash drive.
Chapter 9. Updating and Restoring the Software

$ sudo dd if=path-to-software-image bs=2048 of=usb-drive-device-name

CAUTION: The dd command erases all data on the device that you specify in the of option of the command. To avoid losing data, ensure that you specify the correct path to the USB flash drive.

9.2.3.2 Creating a Bootable USB Flash Drive by Using Akeo Rufus

On a Windows system, you can use the Akeo Reliable USB Formatting Utility (Rufus) to create a bootable USB flash drive that contains the DGX A100 software image.

Ensure that the following prerequisites are met:

- The correct DGX A100 software image is saved to your local disk. For more information, see “Obtaining the DGX A100 Software ISO Image and Checksum File”.
- The USB flash drive has a capacity of at least 8 GB.

1. Plug the USB flash drive into one of the USB ports of your Windows system.
2. Download and launch the Akeo Reliable USB Formatting Utility (Rufus)
3. **Under Drive Properties**, select the following options:
   a. **In Device Selection**, select your USB flash drive.
   b. **In Boot selection**, click **SELECT** and then locate and select the DGX OS ISO image.
   You can leave the other settings at the default.

4. **Click Start.**
   Because the image is a hybrid ISO file, you are prompted to select whether to write the image in ISO Image (file copy) mode or DD Image (disk image) mode.

5. **Select Write in DD Image mode and click OK.**

### 9.2.4 Re-Imaging the System From a USB Flash Drive

These instructions describe how to re-image the system from a USB flash drive. For information about how to restore the system remotely, see “Re-Imaging the System Remotely”.

Before re-imaging the system from a USB flash drive, ensure that you have a bootable USB flash drive that contains the current DGX A100 software image.

1. Plug the USB flash drive containing the OS image into the DGX A100 system.
2. Connect a monitor and keyboard directly to the DGX A100 system.
3. Boot the system and press F11 when the NVIDIA logo appears to get to the boot menu.
4. Select the USB volume name that corresponds to the inserted USB flash drive, and boot the system from it.
5. When the system boots up, select one of the following options from the GRUB menu:
   - **Install DGX OS <version>:** Install DGX OS and reformat data RAID
   - **Install DGX OS <version> Without Reformatting Data RAID**
   - **Advanced Installation Options:** Select if you want to install with an encrypted root filesystem, then select one of the following options.
> Install DGX OS <version> With Encrypted Root
> Install DGX OS <version> With Encrypted Root and Without Reformatting Data RAID

If you are an advanced user who is not using the RAID disks as cache and want to keep data on the RAID disks, then select one of the "Without Reformatting Data RAID" options. See the section “Retaining the RAID Partition While Installing the OS” for more information.

6. Press Enter.

The DGX A100 system will reboot and proceed to install the image. This can take more than 15 minutes.

Refer to “First-Boot Setup” for the steps to take when booting up the DGX A100 system for the first time after a fresh installation.

9.2.5 Installation Options

9.2.5.1 Retaining the RAID Partition While Installing the OS

The reimaging process creates a fresh installation of the DGX OS. During the OS installation or reimage process, you are presented with a boot menu when booting the installer image. The default selection is Install DGX Software. The installation process then repartitions all the SSDs, including the OS SSD as well as the RAID SSDs, and the RAID array is mounted as /raid. This overwrites any data or file systems that may exist on the OS disk as well as the RAID disks.

Since the RAID array on the DGX A100 system is intended to be used as a cache and not for long-term data storage, this should not be disruptive. However, if you are an advanced user and have set up the disks for a non-cache purpose and want to keep the data on those drives, then select the Install DGX Server without formatting RAID option at the boot menu during the boot installation. This option retains data on the RAID disks and performs the following:

- Installs the cache daemon but leaves it disabled by commenting out the \texttt{RUN=yes} line in \texttt{/etc/default/cachefilesd}.
- Creates a \texttt{/raid} directory, leaves it out of the file system table by commenting out the entry containing “\texttt{/raid}” in \texttt{/etc/fstab}.
- Does not format the RAID disks.

When the installation is completed, you can repeat any configurations steps that you had performed to use the RAID disks as other than cache disks.
You can always choose to use the RAID disks as cache disks at a later time by enabling `cachefilesd` and adding `/raid` to the file system table as follows:

1. Uncomment the `#RUN=yes` line in `/etc/default/cachefilesd`.
2. Uncomment the `/raid` line in `/etc/fstab`.
3. Run the following:
   - Mount `/raid`.

   ```bash
   sudo mount /raid
   ```
   - Start the cache daemon.

   ```bash
   systemctl start cachefilesd
   ```

These changes are preserved across system reboots.

### 9.2.5.2 Advanced Installation Options (Encrypted Root - DGX OS 5 or later)

Selecting this menu item provides the ability to encrypt the root filesystem of the DGX. It should normally only be selected if this is desired.

Selecting Encrypted Root instructs the installer to encrypt the root filesystem. The encryption is fully automated and users will be required to manually unlock the root partition by entering a passphrase at the console (either through a direct keyboard and mouse connection or through the BMC) every time the system boots. During the First Boot process (see "First-Boot Setup"), you are provided the opportunity to create your passphrase for the drive. The passphrase can be changed later if needed.

### 9.2.5.3 Boot Into Live Environment (DGX OS 5 or later)

The DGX OS installer image can also be used as a Live image - meaning it boots and runs a minimal DGX OS in system memory and does not overwrite anything on the disks in the system. While this Live mode does not load drivers, and is essentially a simple Ubuntu Server configuration, it can be used as a tool for debugging a system if the disks on the system are not accessible, or otherwise should not be touched.

When booting into the live environment, log in as root (a password is not needed).

In normal operation, this option should not be selected.

### 9.2.5.4 Check Disc for Defects (DGX OS 5 or later)

If you are experiencing oddities when installing DGX OS, and suspect the installation media has an issue, selecting this item will do an extensive test of the contents of the install media. It is time consuming, and the installation media generally is not the real source of the problem.

In normal operation, this option should not be selected.
The NVIDIA DGX A100 system comes with a baseboard management controller (BMC) for monitoring and controlling various hardware devices on the system. It monitors system sensors and other parameters.

10.1 Connecting to the BMC

1. Make sure you have connected the BMC port on the DGX A100 system to your LAN.
2. Open a browser within your LAN and go to:
   https://<bmc-ip-address>/

   The BMC is supported on the following browsers:
   - Internet Explorer 11 and later
   - Firefox 29.0 (64-bit) and later
   - Google Chrome 7.0.3396.87 (64-bit) and later
3. Log in.
Chapter 10. Using the BMC

The BMC dashboard opens.
10.2 Overview of BMC Controls

The left-side navigation menu bar on the BMC main page contains the primary controls.

Table 10.1 BMC Main Controls

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Quick Links ...</td>
<td>Provides quick access to several tasks.</td>
</tr>
<tr>
<td>Dashboard</td>
<td>Displays the overall information about the status of the device.</td>
</tr>
<tr>
<td>Sensor</td>
<td>Provides status and readings for system sensors, such as SSD, PSUs, voltages, CPU temperatures, DIMM temperatures, and fan speeds.</td>
</tr>
<tr>
<td>System Inventory</td>
<td>Displays inventory information of system modules: System, Processor, Memory Controller, BaseBoard, Power, Thermal, PCIE Device, PCIE Function, Storage.</td>
</tr>
<tr>
<td>FRU Information</td>
<td>Provides, chassis, board, and product information for each field-replaceable unit (FRU) device.</td>
</tr>
</tbody>
</table>
### Table 10.1 BMC Main Controls (Continued)

<table>
<thead>
<tr>
<th>Control</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GPU Information</td>
<td>Provides basic information on all the GPUs in the systems, including GUID, VBIOS version, InfoROM version, and number of retired pages for each GPU.</td>
</tr>
<tr>
<td>Logs and Reports</td>
<td>View, and if applicable, download and erase, the IPMI event log, and System, Audit, Video, and POST Code logs.</td>
</tr>
<tr>
<td>Settings</td>
<td>Configure the following settings: Captured BSOD, External User Services, KVM Mouse Setting, Log Settings, Media Redirection Settings, Network Settings, PAM Order Settings, Platform Event Filter, Services, SMTP Settings, SSL Settings, System Firewall, User Management, Video Recording</td>
</tr>
<tr>
<td>Remote Control</td>
<td>Opens the KVM Launch page for accessing the DGX A100 console remotely.</td>
</tr>
<tr>
<td>Power Control</td>
<td>Perform the following power actions: Power On, Power Off, Power Cycle, Hard Reset, ACP/Shutdown</td>
</tr>
<tr>
<td>Chassis ID LED Control</td>
<td>Lets you to change the chassis ID LED behavior: Off, Solid On, Blinking On [select from 5 to 255 second blinking intervals]</td>
</tr>
<tr>
<td>Maintenance</td>
<td>Perform the following maintenance tasks: Backup Configuration, Firmware Image Location, Firmware Update, Preserve Configuration, Restore Configuration, Restore Factory Defaults, System Administrator</td>
</tr>
<tr>
<td>Sign out</td>
<td>Sign out of the BMC web UI.</td>
</tr>
</tbody>
</table>
10.3 Common BMC Tasks

10.3.1 Changing BMC Login Credentials

Adding/Removing Users
1. Select Settings from the left-side navigation menu.
2. Select the User Management card.

3. Click the Help icon (?) for information about configuring users and creating a password.
4. Log out and then log back in with the new credentials.
10.3.2 Using the Remote Console

1. Click Remote Control from the left-side navigation menu.
2. Click Launch KVM to start the remote KVM and access the DGX A100 console.

10.3.3 Setting Up Active Directory or LDAP/E-Directory

1. From the side navigation menu, click Settings and then click External User Services.
2. Click either Active Directory Settings or LDAP/E-Directory Settings and then follow the instructions.

10.3.4 Configuring Platform Event Filters

From the side navigation menu, click Settings and then click Platform Event Filters.

The Event Filters page shows all configured event filters and available slots. You can modify or add new event filter entry on this page.

- To view available configured and unconfigured slots, click All in the upper-left corner of the page.
- To view available configured slots, click Configured in the upper-left corner of the page.
- To view available unconfigured slots, click UnConfigured in the upper-left corner of the page.
- To delete an event filter from the list, click the x icon.
10.3.5 Uploading or Generating SSL Certificates

Two methods are available for setting up a new certificate - generating a (self-signed) SSL, or uploading an SSL (for example, to use a Trusted CA-signed certificate).

From the side navigation menu, click Settings and then click External User Services.

Refer to the following sections for instructions on
- Viewing the SSL Certificate
- Generating an SSL Certificate
- Uploading an SSL Certificate

10.3.5.1 Viewing the SSL Certificate

From the SSL Setting page, select View SSL Certificate.

The View SSL Certificate page displays the basic information about the uploaded SSL certificate.
- Certificate Version, Serial Number, Algorithm, and Public Key
- Issuer information
- Valid Date range
- Issued to information
10.3.5.2 Generating the SSL Certificate

1. From the SSL Setting page, select Generate SSL Certificate.

2. Fill in the information as described in the following table.

Table 10.1

<table>
<thead>
<tr>
<th>Item</th>
<th>Description/Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Common Name [CN]</td>
<td>The common name for which the certificate is to be generated.</td>
</tr>
<tr>
<td></td>
<td>• § Maximum length of 64 alpha-numeric characters.</td>
</tr>
<tr>
<td></td>
<td>• § Special characters ‘#’ and ‘$’ are not allowed.</td>
</tr>
<tr>
<td>Organization [O]</td>
<td>The name of the organization for which the certificate is generated.</td>
</tr>
<tr>
<td></td>
<td>• Maximum length of 64 alpha-numeric characters.</td>
</tr>
<tr>
<td></td>
<td>• § Special characters ‘#’ and ‘$’ are not allowed.</td>
</tr>
<tr>
<td>Organization Unit [OU]</td>
<td>Overall organization section unit name for which the certificate is generated.</td>
</tr>
<tr>
<td></td>
<td>• Maximum length of 64 alpha-numeric characters.</td>
</tr>
<tr>
<td></td>
<td>• § Special characters ‘#’ and ‘$’ are not allowed.</td>
</tr>
<tr>
<td>City or Locality [L]</td>
<td>City or Locality of the organization (mandatory)</td>
</tr>
<tr>
<td></td>
<td>• Maximum length of 64 alpha-numeric characters.</td>
</tr>
<tr>
<td></td>
<td>• § Special characters ‘#’ and ‘$’ are not allowed.</td>
</tr>
<tr>
<td>State or Province [ST]</td>
<td>State or Province of the organization (mandatory)</td>
</tr>
<tr>
<td></td>
<td>• Maximum length of 64 alpha-numeric characters.</td>
</tr>
<tr>
<td></td>
<td>• § Special characters ‘#’ and ‘$’ are not allowed.</td>
</tr>
<tr>
<td>Country [C]</td>
<td>Country code of the organization.</td>
</tr>
<tr>
<td></td>
<td>• Only two characters are allowed.</td>
</tr>
<tr>
<td></td>
<td>• Special characters are not allowed.</td>
</tr>
<tr>
<td>Email Address</td>
<td>Email address of the organization (mandatory)</td>
</tr>
<tr>
<td>Valid for</td>
<td>Validity of the certificate.</td>
</tr>
<tr>
<td></td>
<td>Enter a range from 1 to 3650 [days]</td>
</tr>
<tr>
<td>Key Length</td>
<td>The key length bit value of the certificate [Ex. 2048 bits]</td>
</tr>
</tbody>
</table>

11. Click Save to generate the new certificate.
10.3.5.3 Uploading the SSL Certificate

Make sure the certificate and key meet the following requirements:

- SSL certificates and keys must both use the .pem file extension.
- Private keys must not be encrypted.
- SSL certificates and keys must each be less than 3584 bits in size.
- SSL certificates must be current (not expired).

1. From the SSL Setting page, select Upload SSL Certificate.
2. Click the New Certificate folder icon, then browse to locate the appropriate file and select it.
3. Click the New Private Key folder icon, then browse and locate the appropriate file and select it.
4. Click Save.
Chapter 11. Multi-Instance GPU

Multi-Instance GPU (MIG) is a new capability of the NVIDIA A100 GPU. MIG uses spatial partitioning to carve the physical resources of a single A100 GPU into as many as seven independent GPU instances. These instances run simultaneously, each with its own memory, cache, and compute streaming multiprocessors. MIG enables the A100 GPU to deliver guaranteed quality of service at up to 7X higher utilization compared to non-MIG enabled GPUs.

MIG enables:

- GPU memory isolation among parallel GPU workloads
- Physical allocation of resources used by parallel GPU workloads

Management of MIG instances is accomplished using the NVIDIA Management Library (NVML) APIs or its command-line utility (nvidia-smi). Enablement of MIG requires a GPU reset and hence some system services that manage GPUs should be terminated before enabling MIG.

To enable MIG on all eight GPUs in the system, issue the following.

1. Stop the NVSM and DCGM services.

$ sudo systemctl stop nvsm dcgm

2. Enable MIG on all eight GPUs.

$ sudo nvidia-smi -mig 1

If other services are running that prevent you from resetting the GPUs, then reboot the system and skip the next step.

3. Restart the DCGM and NVSM services.

$ sudo systemctl start dcgm nvsm

For instructions on how to use MIG, see the MIG User Guide. The MIG User Guide provides more detailed information about key MIG concepts and deployment considerations, and explains how to create MIG instances and how to run Docker containers using MIG.
Chapter 12. Security

12.1 User Security Measures

The NVIDIA DGX A100 system is a specialized server designed to be deployed in a data center. It must be configured to protect the hardware from unauthorized access and unapproved use. The DGX A100 system is designed with a dedicated BMC Management Port and multiple Ethernet network ports.

When installing the DGX A100 system in the data center, follow best practices as established by your organization to protect against unauthorized access.

12.1.1 Securing the BMC Port

NVIDIA recommends that the BMC port of the DGX A100 system be connected to a dedicated management network with firewall protection. If remote access to the BMC is required (such as for a system hosted at a co-location provider), it should be accessed through a secure method that provides isolation from the internet, such as through a VPN server.

12.2 System Security Measures

The NVIDIA DGX A100 system incorporates the following security measures.

12.2.1 Secure Flash of DGX A100 Firmware

Secure Flash is implemented for the DGX A100 to prevent unsigned and unverified firmware images from being flashed onto the system.

12.2.1.1 Encryption

- The firmware encryption algorithm is AES-CBC.
- The firmware encryption key strength is 128 bits or higher.
- Each firmware class uses a unique encryption key.
Firmware decryption is performed either by the same agent that performs signature check or a more trusted agent in the same COT.

### 12.2.1.2 Signing

- The firmware signature is validated upon each boot of the DGX A100.
- This is not implemented for the Power Supply and support controllers on the DGX A100.
- The firmware signature is validated on every update before the firmware image is updated in non-volatile storage.

### 12.2.2 NVSM Security

See Configuring NVSM Security.

### 12.3 Secure Data Deletion

This section explains how to securely delete data from the NVIDIA DGX A100 system SSDs to permanently destroy all the data that was stored there. This performs a more secure SSD data deletion than merely deleting files or reformatting the SSDs.

#### 12.3.1 Prerequisite

Prepare a bootable installation medium that contains the current DGX OS Server ISO image.

See:
- “Obtaining the DGX A100 Software ISO Image and Checksum File”
- “Creating a Bootable Installation Medium”

#### 12.3.2 Instructions

1. Boot the system from the ISO image, either remotely or from a bootable USB key.
2. At the GRUB menu, choose
   - (For DGX OS 4): ‘Rescue a broken system’, then configure the locale and network information.
   - (For DGX OS 5): ‘Boot Into Live Environment’, then configure the locale and network information.
3. When asked to choose a root file system, choose ‘Do not use a root file system’ and then
‘Execute a shell in the installer environment’

4. Log in.

5. Run the following command to identify the devices available in the system:

```bash
$ nvme list
```

If nvmecli is not installed, then install the CLI as follows and then run `nvme list`.

DGX OS 4:

```bash
$ dpkg -i /cdrom/extras/pool/main/n/nvme-cli/nvme-cli_1.5-1ubuntu1_amd64.deb
```

DGX OS 5:

```bash
$ dpkg -i /usr/lib/live/mount/rootfs/filesystem.squashfs/curtin/repo/nvme-cli_1.9-1ubuntu0.1_amd64.deb
```

6. Run `nvme format -s1` on all storage devices listed.

Syntax:

```bash
$ nvme format -s1 <device-path>
```

where

`<device-path>` is the specific storage node as listed in the previous step.

For example, `/dev/nvme0n1`. 
Appendix A. Installing Software on Air-gapped DGX A100 Systems

For security purposes, some installations require that systems be isolated from the internet or outside networks. Since most DGX A100 software updates are accomplished through an over-the-network process with NVIDIA servers, this section explains how updates can be made when using an over-the-network method is not an option. It includes a process for installing Docker containers as well.

A.1 Installing NVIDIA DGX A100 Software

One method for updating DGX A100 software on an air-gapped DGX A100 system is to download the ISO image, copy it to removable media and then re-image the DGX A100 System from the media. This method is available only for software versions that are available as ISO images for download.

Alternately, you can update the DGX A100 software by performing a network update from a local repository. This method is available only for software versions that are available for over-the-network updates.

A.2 Re-Imaging the System

CAUTION: This process destroys all data and software customizations that you have made on the DGX A100 System. Be sure to back up any data that you want to preserve and push any Docker images that you want to keep to a trusted registry.

1 Obtain the ISO image from the NVIDIA Enterprise Services.
   a. Log on to the NVIDIA Enterprise Support site and click the Announcements tab to locate the DGX OS Server image ISO file.
   b. Download the image ISO file.
2. Refer to the instructions in the “Restoring the DGX A100 Software Image” section for additional instructions.

A.3 Creating a Local Mirror of the NVIDIA and Canonical Repositories

The procedure below describes how to download all the necessary packages to create a mirror of the repositories that are needed to update NVIDIA DGX A100 systems. For more information on DGX OS versions and the release notes available, visit https://docs.nvidia.com/dgx/dgx-os-server-release-notes/index.html#dgx-os-release-number-scheme.

1. Identify the sources corresponding to the public NVIDIA and Canonical repositories that provide updates to the DGX software.

You can identify these sources from the /etc/apt/sources.list file and the contents of /etc/apt/sources.list.d/ directory, or by using System Settings, Software & Updates.

2. Create and maintain a private mirror of the repository sources that you identified in the previous step.

   • If you are running DGX OS 4.x, see Creating the Mirror in a DGX OS 4 System.
   • If you are running DGX OS 5, see Creating the Mirror in a DGX OS 5 System.

3. Update the sources that provide updates to the DGX system to use your private repository mirror instead of the public repositories.

   For detailed instructions, see , which provides examples for DGX OS Desktop 4 releases.

   To update these sources, modify the /etc/apt/sources.list file and the contents of /etc/apt/sources.list.d/ directory.

   • If you are running DGX OS 4.x, see Configuring the Target Air-Gapped DGX OS 4 System.
   • If you are running DGX OS 5.x, see Configuring the Target Air-Gapped DGX OS 5 System.

A.3.1 Creating the Mirror for the DGX OS 4 System

The instructions in this section are to be performed on a system with network access.

Prerequisites

> A system installed with Ubuntu OS is needed to create the mirror because there are several Ubuntu tools that need to be used.
You must be logged in to the system installed with Ubuntu OS as an administrator user because this procedure requires sudo privileges.

The system must contain enough storage space to replicate the repositories to a filesystem; the space requirement could be as high as 250GB.

An efficient way to move large amount of data; for example, shared storage in a DMZ, or portable USB drives that can be brought into the air-gapped area.

The data will need to be moved to the systems that need to be updated. Make sure the portable drive is formatted using ext4 or FAT32.

1. Make sure the storage device is attached to the system with network access and identify the mount point.

   **Example mount point:** `/media/usb/repository`

2. Once the space requirement has been met, install the `apt-mirror` package.

   ```
   $ sudo apt update
   $ sudo apt install apt-mirror
   ```

3. Change the ownership of the target directory to the `apt-mirror` user in the `apt-mirror` group.

   ```
   $ sudo chown apt-mirror:apt-mirror /media/usb/repository
   ```

   The target directory must be owned by the user `apt-mirror` or the replication will not work.

4. Configure the path of the destination directory in `/etc/apt/mirror.list` and use the included list of repositories below to retrieve the packages for both Ubuntu base OS as well as the NVIDIA DGX OS packages:

   ```
   # Standard Canonical package repositories:
   deb http://security.ubuntu.com/ubuntu bionic-security main multiverse universe
   deb http://archive.ubuntu.com/ubuntu/ bionic main multiverse universe
   deb http://archive.ubuntu.com/ubuntu/ bionic-updates main multiverse universe
   deb http://archive.ubuntu.com/ubuntu/ bionic-updates main multiverse universe
   ```
# DGX specific repositories:
deb http://international.download.nvidia.com/dgx/repos/bionic bionic main restricted universe multiverse
deb http://international.download.nvidia.com/dgx/repos/bionic bionic-updates main restricted universe multiverse
deb http://international.download.nvidia.com/dgx/repos/bionic bionic-r418+cuda10.1 main multiverse restricted universe
#
deb-i386 http://international.download.nvidia.com/dgx/repos/bionic bionic main restricted universe multiverse
deb-i386 http://international.download.nvidia.com/dgx/repos/bionic bionic-updates main restricted universe multiverse
# Only for DGX OS 4.1.0 and later
deb-i386 http://international.download.nvidia.com/dgx/repos/bionic bionic-r418+cuda10.1 main multiverse restricted universe

# Optional for using the Release 450 driver package
deb-i386 http://international.download.nvidia.com/dgx/repos/bionic bionic-r450+cudai1.0 main multiverse restricted universe
deb http://international.download.nvidia.com/dgx/repos/bionic bionic-r450+cuda11.0 main multiverse restricted universe

# Clean unused items
clean http://archive.ubuntu.com/ubuntu
clean http://security.ubuntu.com/ubuntu

5. Run `apt-mirror` and wait for it to finish downloading content. This will take a long time depending on the network connection speed.

```
$ sudo apt-mirror
```

6. Eject the removable storage with all packages.

```
$ sudo eject /media/usb/repository
```

A.3.2 Configuring the Target Air-Gapped DGX OS 4 System

The instructions in this section are to be performed on the target air-gapped DGX system.

Prerequisites

- The target DGX A100 system is installed, has gone through the first boot process, and is ready to be updated with the latest packages.
- The USB storage device on which the mirrors were created is attached to the target DGX A100 system.

There are other ways to transfer the data that are not covered in this document as they will depend on the data center policies for the air-gapped environment.

1. Mount the storage device on the air-gapped system to `/media/usb/repository` for consistency.
2. Configure `apt` to use the filesystem as the repository in the file `/etc/apt/sources.list` by modifying the following lines.
3. Configure apt to use the NVIDIA DGX OS packages in the file `/etc/apt/sources.list.d/dgx.list`.

4. If present, remove the file `/etc/apt/sources.list.d/docker.list` as it is no longer needed and it will eliminate error messages during the update process.

5. Configure apt to use the NVIDIA DGX OS packages in the file `/etc/apt/sources.list.d/dgx-bionic-r450-cuda11.0-repo.list`.

```
$ echo "deb file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic/bionic-r450-cuda11.0 main multiverse restricted universe"
```

6. Edit the file `/etc/apt/preferences.d/nvidia` to update the Pin parameter as follows.

```
Package: *
#Pin: origin international.download.nvidia.com
Pin: release o=DGX Server
Pin-Priority: 600
```

7. Update the apt repository and confirm there are no errors.

```
$ sudo apt update
```

```
Get:1 file:///media/usb/repository/mirror/security.ubuntu.com/ubuntu bionic-security InRelease [88.7 kB]

Get:9 file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic+bionic-r418+cuda10.1/restricted i386 Packages [516 B]
Get:10 file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic+bionic/multiverse amd64 Packages [44.5 kB]
Get:11 file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic+bionic/multiverse i386 Packages [8,575 B]
Get:12 file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic+bionic/restricted amd64 Packages [745 B]
Get:13 file:///media/usb/repository/mirror/international.download.nvidia.com/dgx/repos/bionic+bionic/restricted i386 Packages [8,379 B]
```

8. Upgrade the system using the newly configured local repositories.

```bash
sudo apt full-upgrade
```

9. Optional: If you want to use CUDA Toolkit 11.0, install it.

```bash
sudo apt install cuda-toolkit-11-0
```

### A.3.3 Creating the Mirror for the DGX OS 5 System

The instructions in this section are to be performed on a system with network access.

**Prerequisites**

- A system installed with Ubuntu OS is needed to create the mirror because there are several Ubuntu tools that need to be used.
- You must be logged in to the system installed with Ubuntu OS as an administrator user because this procedure requires sudo privileges.
- The system must contain enough storage space to replicate the repositories to a filesystem; the space requirement could be as high as 250GB.
- An efficient way to move large amount of data; for example, shared storage in a DMZ, or portable USB drives that can be brought into the air-gapped area.

The data will need to be moved to the systems that need to be updated. Make sure the portable drive is formatted using ext4 or FAT32.

1. Make sure the storage device is attached to the system with network access and identify the mount point.

   **Example mount point used in these instructions:** `/media/usb/repository`

2. Once the space requirement has been met, install the `apt-mirror` package.

```bash
sudo apt update

sudo apt install apt-mirror
```

3. Change the ownership of the target directory to the `apt-mirror` user in the `apt-mirror` group.

```bash
sudo chown apt-mirror:apt-mirror /media/usb/repository
```

The target directory must be owned by the user `apt-mirror` or the replication will not work.
4. Configure the path of the destination directory in /etc/apt/mirror.list and use the included list of repositories below to retrieve the packages for both Ubuntu base OS as well as the NVIDIA DGX OS packages:

```
# config
set base_path /media/usb/repository #/your/path/here
set mirror_path $base_path/mirror
set skel_path $base_path/skel
set var_path $base_path/var
set cleanscript $var_path/clean.sh
set defaultarch <running host architecture>
set postmirror_script $var_path/postmirror.sh
set run_postmirror 0
set nthreads 20
set _tilde 0
end config
```

# Standard Canonical package repositories:
```
deb http://security.ubuntu.com/ubuntu focal-security main multiverse universe restricted
deb http://archive.ubuntu.com/ubuntu/ focal main multiverse universe restricted
```

# CUDA specific repositories:
```
```

# DGX specific repositories:
```
deb http://repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/ focal common dgx
deb http://repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/ focal-updates common dgx
```

# Clean unused items
```
clean http://archive.ubuntu.com/ubuntu
clean http://security.ubuntu.com/ubuntu
```

5. Run `apt-mirror` and wait for it to finish downloading content.
   This will take a long time depending on the network connection speed.

```
$ sudo apt-mirror
```

6. Eject the removable storage with all packages.

```
$ sudo eject /media/usb/repository
```
A.3.4 Configuring the Target Air-Gapped DGX OS 5 System

The instructions in this section are to be performed on the target air-gapped DGX system.

Prerequisites

- The target DGX A100 system is installed, has gone through the first boot process, and is ready to be updated with the latest packages.
- The USB storage device on which the mirrors were created is attached to the target DGX A100 system.

There are other ways to transfer the data that are not covered in this document as they will depend on the data center policies for the air-gapped environment.

1. Mount the storage device on the air-gapped system to `/media/usb/repository` for consistency.
2. Configure `apt` to use the filesystem as the repository in the file `/etc/apt/sources.list` by modifying the following lines.

```
deb file:///media/usb/repository/mirror/security.ubuntu.com/ubuntu focal-security main multiverse universe restricted

deb file:///media/usb/repository/mirror/archive.ubuntu.com/ubuntu focal main multiverse universe restricted

deb file:///media/usb/repository/mirror/archive.ubuntu.com/ubuntu focal-updates main multiverse universe restricted
```

3. Configure `apt` to use the NVIDIA DGX OS packages in the file `/etc/apt/sources.list.d/dgx.list`.

```
deb file:///media/usb/repository/mirror/repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/ focal main dgx

deb file:///media/usb/repository/mirror/repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/ focal-updates main dgx
```

4. Configure `apt` to use the NVIDIA CUDA packages in the file `/etc/apt/sources.list.d/cuda-compute-repo.list` file.

```
deb file:///media/usb/repository/mirror/developer.download.nvidia.com/compute/cuda/repos/ubuntu2004/x86_64/ /
```

5. Update the `apt` repository and confirm there are no errors.

```
$ sudo apt update
```

Output from this command is similar to the following example.

```
Get:1 file:///media/usb/repository/mirror/security.ubuntu.com/ubuntu focal-security InRelease [107 kB]
Get:2 file:///media/usb/repository/mirror/archive.ubuntu.com/ubuntu focal InRelease [265 kB]
Get:3 file:///media/usb/repository/mirror/archive.ubuntu.com/ubuntu focal-updates InRelease [111 kB]
Get:4 file:///media/usb/repository/mirror/developer.download.nvidia.com/compute/cuda/repos/ubuntu2004/x86_64/ InRelease
Get:5 file:///media/usb/repository/mirror/repo.download.nvidia.com/baseos/ubuntu/focal/x86_64/ InRelease
```

NVIDIA CONFIDENTIAL
DGX A100 System

DU-09821-001_v04 | 11
6. Upgrade the system using the newly configured local repositories.

```bash
$ sudo apt full-upgrade
```

## A.4 Installing Docker Containers

This method applies to Docker containers hosted on the NVIDIA NGC Container Registry, and requires that you have an active NGC account.

1. On a system with internet access, log in to the NGC Container Registry by entering the following command and credentials.

```bash
$ docker login nvcr.io
```

   Username: $oauthtoken
   Password: apikey

   Type "$oauthtoken" exactly as shown for the Username. This is a special username that enables API key authentication. In place of apikey, paste in the API Key text that you obtained from the NGC website.

2. Enter the docker pull command, specifying the image registry, image repository, and tag:

```bash
$ docker pull nvcr.io/nvidia/repository:tag
```

3. Verify the image is on your system using docker images.

```bash
$ docker images
```

4. Save the Docker image as an archive.

```bash
$ docker save nvcr.io/nvidia/repository:tag > framework.tar
```

5. Transfer the image to the air-gapped system using removable media such as a USB flash drive.

6. Load the NVIDIA Docker image.

```bash
$ docker load -i framework.tar
```

7. Verify the image is on your system.

```bash
$ docker images
```
Appendix B. Safety

B.1 Safety Information

To reduce the risk of bodily injury, electrical shock, fire, and equipment damage, read this document and observe all warnings and precautions in this guide before installing or maintaining your server product.

In the event of a conflict between the information in this document and information provided with the product or on the website for a particular product, the product documentation takes precedence.

Your server should be integrated and serviced only by technically qualified persons.

You must adhere to the guidelines in this guide and the assembly instructions in your server manuals to ensure and maintain compliance with existing product certifications and approvals. Use only the described, regulated components specified in this guide. Use of other products or components will void the UL Listing and other regulatory approvals of the product, and may result in noncompliance with product regulations in the region(s) in which the product is sold.

B.2 Safety Warnings and Cautions

To avoid personal injury or property damage, before you begin installing the product, read, observe, and adhere to all of the following safety instructions and information. The following safety symbols may be used throughout the documentation and may be marked on the product and/or the product packaging.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAUTION</td>
<td>Indicates the presence of a hazard that may cause minor personal injury or property damage if the CAUTION is ignored.</td>
</tr>
</tbody>
</table>
### B.3 Intended Application Uses

This product was evaluated as Information Technology Equipment (ITE), which may be installed in offices, schools, computer rooms, and similar commercial type locations. The suitability of this product for other product categories and environments (such as medical, industrial, residential, alarm systems, and test equipment), other than an ITE application, may require further evaluation.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="WARNING" /></td>
<td>Indicates the presence of a hazard that may result in serious personal injury if the WARNING is ignored.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Indicates potential hazard if indicated information is ignored.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Indicates shock hazards that result in serious injury or death if safety instructions are not followed</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Indicates hot components or surfaces.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Indicates do not touch fan blades, may result in injury.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Shock hazard - Product might be equipped with multiple power cords. To remove all hazardous voltages, disconnect all power cords.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>High leakage current ground(earth) connection to the Power Supply is essential before connecting the supply.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>Recycle the battery.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>The rail racks are designed to carry only the weight of the server system. Do not use rail-mounted equipment as a workspace. Do not place additional load onto any rail-mounted equipment.</td>
</tr>
</tbody>
</table>
B.4 Site Selection

Choose a site that is:

- Clean, dry, and free of airborne particles (other than normal room dust).
- Well-ventilated and away from sources of heat including direct sunlight and radiators.
- Away from sources of vibration or physical shock.
- In regions that are susceptible to electrical storms, we recommend you plug your system into a surge suppressor and disconnect telecommunication lines to your modem during an electrical storm.
- Provided with a properly grounded wall outlet.
- Provided with sufficient space to access the power supply cord(s), because they serve as the product’s main power disconnect.

B.5 Equipment Handling Practices

Reduce the risk of personal injury or equipment damage:

- Conform to local occupational health and safety requirements when moving and lifting equipment.
- Use mechanical assistance or other suitable assistance when moving and lifting equipment.

B.6 Electrical Precautions

Power and Electrical Warnings

Caution: The power button, indicated by the stand-by power marking, DOES NOT completely turn off the system AC power; standby power is active whenever the system is plugged in. To remove power from system, you must unplug the AC power cord from the wall outlet. Make sure all AC power cords are unplugged before you open the chassis, or add or remove any non hot-plug components.

Do not attempt to modify or use an AC power cord if it is not the exact type required. A separate AC cord is required for each system power supply.

Some power supplies in servers use Neutral Pole Fusing. To avoid risk of shock use caution when working with power supplies that use Neutral Pole Fusing.

The power supply in this product contains no user-serviceable parts. Do not open the power supply. Hazardous voltage, current and energy levels are present inside the power supply. Return to manufacturer for servicing.
When replacing a hot-plug power supply, unplug the power cord to the power supply being replaced before removing it from the server.

To avoid risk of electric shock, turn off the server and disconnect the power cords, telecommunications systems, networks, and modems attached to the server before opening it.

**Power Cord Warnings**

Use certified AC power cords to connect to the server system installed in your rack.

Caution: To avoid electrical shock or fire, check the power cord(s) that will be used with the product as follows:

- Do not attempt to modify or use the AC power cord(s) if they are not the exact type required to fit into the grounded electrical outlets.
- The power cord(s) must meet the following criteria:
  - The power cord must have an electrical rating that is greater than that of the electrical current rating marked on the product.
  - The power cord must have safety ground pin or contact that is suitable for the electrical outlet.
  - The power supply cord(s) is/are the main disconnect device to AC power. The socket outlet(s) must be near the equipment and readily accessible for disconnection.
  - The power supply cord(s) must be plugged into socket-outlet(s) that is/are provided with a suitable earth ground.

**B.7 System Access Warnings**

Caution: To avoid personal injury or property damage, the following safety instructions apply whenever accessing the inside of the product:

- Turn off all peripheral devices connected to this product.
- Turn off the system by pressing the power button to off.
- Disconnect the AC power by unplugging all AC power cords from the system or wall outlet.
- Disconnect all cables and telecommunication lines that are connected to the system.
- Retain all screws or other fasteners when removing access cover(s). Upon completion of accessing inside the product, refasten access cover with original screws or fasteners.
- Do not access the inside of the power supply. There are no serviceable parts in the power supply.
- Return to manufacturer for servicing.
- Power down the server and disconnect all power cords before adding or replacing any non hot-plug component.
When replacing a hot-plug power supply, unplug the power cord to the power supply being replaced before removing the power supply from the server.

Caution: If the server has been running, any installed processor(s) and heat sink(s) may be hot.

Unless you are adding or removing a hot-plug component, allow the system to cool before opening the covers. To avoid the possibility of coming into contact with hot component(s) during a hot-plug installation, be careful when removing or installing the hot-plug component(s).

Caution: To avoid injury do not contact moving fan blades. Your system is supplied with a guard over the fan, do not operate the system without the fan guard in place.

B.8 Rack Mount Warnings

Note: The following installation guidelines are required by UL for maintaining safety compliance when installing your system into a rack.

The equipment rack must be anchored to an unmovable support to prevent it from tipping when a server or piece of equipment is extended from it. The equipment rack must be installed according to the rack manufacturer’s instructions.

Install equipment in the rack from the bottom up with the heaviest equipment at the bottom of the rack.

Extend only one piece of equipment from the rack at a time.

You are responsible for installing a main power disconnect for the entire rack unit. This main disconnect must be readily accessible, and it must be labeled as controlling power to the entire unit, not just to the server(s).

To avoid risk of potential electric shock, a proper safety ground must be implemented for the rack and each piece of equipment installed in it.

Elevated Operating Ambient- If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature $T_{ma}$ specified by the manufacturer.

Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

Mechanical Loading- Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.
Circuit Overloading- Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

Reliable Earthing- Reliable earthing of rack-mounted equipment should be maintained.

Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).

B.9 Electrostatic Discharge (ESD)

Caution: ESD can damage drives, boards, and other parts. We recommend that you perform all procedures at an ESD workstation. If one is not available, provide some ESD protection by wearing an antistatic wrist strap attached to chassis ground -- any unpainted metal surface -- on your server when handling parts.

Always handle boards carefully. They can be extremely sensitive to ESD. Hold boards only by their edges. After removing a board from its protective wrapper or from the server, place the board component side up on a grounded, static free surface. Use a conductive foam pad if available but not the board wrapper. Do not slide board over any surface.

B.10 Other Hazards

CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL:

Perchlorate Material – special handling may apply. See www.dtsc.ca.gov/perchlorate.

Perchlorate Material: Lithium battery (CR2032) contains perchlorate. Please follow instructions for disposal.

NICKEL

NVIDIA Bezel. The bezel’s decorative metal foam contains some nickel. The metal foam is not intended for direct and prolonged skin contact. Please use the handles to remove, attach or carry the bezel. While nickel exposure is unlikely to be a problem, you should be aware of the possibility in case you’re susceptible to nickel-related reactions.
Battery Replacement

Caution: There is the danger of explosion if the battery is incorrectly replaced. When replacing the battery, use only the battery recommended by the equipment manufacturer.

Dispose of batteries according to local ordinances and regulations. Do not attempt to recharge a battery.

Do not attempt to disassemble, puncture, or otherwise damage a battery.

更換電池警告:
警告
更換不正確之電池型式會有爆炸的風險
請依製造商指示書處理用過之電池.

Cooling and Airflow

Caution: Carefully route cables as directed to minimize airflow blockage and cooling problems. For proper cooling and airflow, operate the system only with the chassis covers installed. Operating the system without the covers in place can damage system parts. To install the covers:

► Check first to make sure you have not left loose tools or parts inside the system.
► Check that cables, add-in cards, and other components are properly installed.
► Attach the covers to the chassis according to the product instructions.

The equipment is intended for installation only in a Server Room/ Computer Room where both these conditions apply:

► Access can only be gained by SERVICE PERSONS or by USERS who have been instructed about the reasons for the restrictions applied to the location and about any precautions that shall be taken; and

► Access is through the use of a TOOL or lock and key, or other means of security, and is controlled by the authority responsible for the location.
Appendix C. Compliance

The NVIDIA DGX A100 Server is compliant with the regulations listed in this section.

C.1 United States

Federal Communications Commission (FCC)

FCC Marking (Class A)

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including any interference that may cause undesired operation of the device.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

California Department of Toxic Substances Control: Perchlorate Material - special handling may apply. See www.dtsc.ca.gov/perchlorate.

C.2 United States / Canada

TÜV Rheinland of North America is accredited as a Nationally Recognized Testing Laboratory (NRTL), by OSHA (The Occupational Safety and Health Administration) in the United States, and as a Product Certification Body by SCC (Standards Council of Canada) in Canada. Refer to https://www.tuv.com/usa/en/ctuvus-certification.html

cTUVus Mark
C.3 Canada

Innovation, Science and Economic Development Canada (ISED)
CAN ICES-3(A)/NMB-3(A)
The Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulation.
Cet appareil numérique de la class A respecte toutes les exigences du Reglement sur le materiel brouilleur du Canada.

C.4 CE

European Conformity; Conformité Européenne (CE)

This is a Class A product. In a domestic environment this product may cause radio frequency interference in which case the user may be required to take adequate measures.
This device bears the CE mark in accordance with Directive 2014/53/EU.
This device complies with the following Directives:
› Low Voltage Directive for electrical safety.
› RoHS Directive for hazardous substances.
› Energy-related Products Directive (ErP).
The full text of EU declaration of conformity is available at the following internet address: [www.nvidia.com/support](http://www.nvidia.com/support)

A copy of the Declaration of Conformity to the essential requirements may be obtained directly from NVIDIA GmbH (Bavaria Towers – Blue Tower, Einsteinstrasse 172, D-81677 Munich, Germany).

**C.5 Australia and New Zealand**

Australian Communications and Media Authority

This product meets the applicable EMC requirements for Class A, I.T.E equipment.

**C.6 Brazil**

INMETRO

**C.7 Japan**

Voluntary Control Council for Interference (VCCI)
This is a Class A product.

In a domestic environment this product may cause radio interference, in which case the user may be required to take corrective actions. VCCI-A

A Japanese regulatory requirement, defined by specification JIS C 0950, 2008, mandates that manufacturers provide Material Content Declarations for certain categories of electronic products offered for sale after July 1, 2006.

To view the JIS C 0950 material declaration for this product, visit www.nvidia.com

</table>
The table according to SJ/T 11364-2014

- O: Indicates that this hazardous substance contained in all of the homogeneous materials for this part is below the limit requirement in GB/T 26572-2011.
- X: Indicates that this hazardous substance contained in at least one of the homogeneous materials used for this part is above the limit requirement in GB/T 26572-2011.

All parts named in this table with an “X” are in compliance with the European Union’s RoHS Legislation.

Note: The referenced Environmental Protection Use Period Marking was determined according to normal operating use conditions of the product such as temperature and humidity.

備考 1：O：系指該限制物質未超出百分比含量基準值。  
備考 2：-：系指該限制物質為排外項目。  
備考 3：-：系指該限制物質該項目對應於豁免。  
此表中所有名稱中含 “-” 的部件均符合歐盟 RoHS 立法。  
All parts named in this table with an “-” are in compliance with the European Union's RoHS Legislation.  
注：環境使用期限的參考標準取決於產品實際工作溫度和濕度等條件。  
Note: The referenced Environmental Protection Use Period Marking was determined according to normal operating use conditions of the product such as temperature and humidity.

India RoHS compliance statement:

This product, as well as its related consumables and spares, complies with the reduction in hazardous substances provisions of the “India E-waste (Management and Handling) Rule 2016”. It does not contain lead, mercury, hexavalent chromium, polybrominated biphenyls or polybrominated diphenyl ethers in concentrations exceeding 0.1 weight % and 0.01 weight % for cadmium, except for where allowed pursuant to the exemptions set in Schedule 2 of the Rule.

C.14 South Africa

South African Bureau of Standards (SABS)

This device complies with the following SABS Standards:
National Regulator of Compulsory Specification (NRCS)

This device complies with following standard under VC 8055:
SANS IEC 60950-1
Notice

THE INFORMATION IN THIS GUIDE AND ALL OTHER INFORMATION CONTAINED IN NVIDIA DOCUMENTATION REFERENCED IN THIS GUIDE IS PROVIDED “AS IS.” NVIDIA MAKES NO WARRANTIES, EXPRESSED, IMPLIED, STATUTORY, OR OTHERWISE WITH RESPECT TO THE INFORMATION FOR THE PRODUCT, AND EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES OF NONINFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE. Notwithstanding any damages that customer might incur for any reason whatsoever, NVIDIA’s aggregate and cumulative liability towards customer for the product described in this guide shall be limited in accordance with the NVIDIA terms and conditions of sale for the product.

THE NVIDIA PRODUCT DESCRIBED IN THIS GUIDE IS NOT FAULT TOLERANT AND IS NOT DESIGNED, MANUFACTURED OR INTENDED FOR USE IN CONNECTION WITH THE DESIGN, CONSTRUCTION, MAINTENANCE, AND/OR OPERATION OF ANY SYSTEM WHERE THE USE OR A FAILURE OF SUCH SYSTEM COULD RESULT IN A SITUATION THAT THREATENS THE SAFETY OF HUMAN LIFE OR SEVERE PHYSICAL HARM OR PROPERTY DAMAGE (INCLUDING, FOR EXAMPLE, USE IN CONNECTION WITH ANY NUCLEAR, AVIONICS, LIFE SUPPORT OR OTHER LIFE CRITICAL APPLICATION). NVIDIA EXPRESSLY DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR SUCH HIGH RISK USES. NVIDIA SHALL NOT BE LIABLE TO CUSTOMER OR ANY THIRD PARTY, IN WHOLE OR IN PART, FOR ANY CLAIMS OR DAMAGES ARISING FROM SUCH HIGH RISK USES.

NVIDIA makes no representation or warranty that the product described in this guide will be suitable for any specified use without further testing or modification. Testing of all parameters of each product is not necessarily performed by NVIDIA. It is customer’s sole responsibility to ensure the product is suitable and fit for the application planned by customer and to do the necessary testing for the application in order to avoid a default of the application or the product. Weaknesses in customer’s product designs may affect the quality and reliability of the NVIDIA product and may result in additional or different conditions and/or requirements beyond those contained in this guide. NVIDIA does not accept any liability related to any default, damage, costs or problem which may be based on or attributable to: (i) the use of the NVIDIA product in any manner that is contrary to this guide, or (ii) customer product designs.

Other than the right for customer to use the information in this guide with the product, no other license, either expressed or implied, is hereby granted by NVIDIA under this guide. Reproduction of information in this guide is permissible only if reproduction is approved by NVIDIA in writing, is reproduced without alteration, and is accompanied by all associated conditions, limitations, and notices.
