

Class AsyncPingTxOp

Table of contents

Inheritance Relationships

Class Documentation

- Defined in [File async_ping_tx.hpp](#)

Inheritance Relationships

Base Type

- `public holoscan::Operator` ([Class Operator](#))

Class Documentation

class AsyncPingTxOp : public holoscan::[Operator](#)

Simple asynchronous transmitter operator.

==Named Outputs==

- out** : int
 - An index value that increments by one on each call to `compute`. The starting value is 1.

==Parameters==

- delay**: Ping delay in ms. Optional (default: `10L`)
- count**: Ping count. Optional (default: `0UL`)
- async_condition**: [AsynchronousCondition](#) adding async support to the operator. Optional (default: `nullptr`)

Public Functions

HOLOSCAN_OPERATOR_FORWARD_ARGS (AsyncPingTxOp) AsyncPingTxOp()=default

`virtual void setup(OperatorSpec &spec) override`

Define the operator specification.

Parameters

spec – The reference to the operator specification.

`virtual void initialize() override`

Initialize the operator.

This function is called when the fragment is initialized by [Executor::initialize_fragment\(\)](#).

`virtual void start() override`

Implement the startup logic of the operator.

This method is called multiple times over the lifecycle of the operator according to the order defined in the lifecycle, and used for heavy initialization tasks such as allocating memory resources.

`virtual void compute(InputContext&, OutputContext &op_output, ExecutionContext&) override`

Implement the compute method.

This method is called by the runtime multiple times. The runtime calls this method until the operator is stopped.

Parameters

- **op_input** – The input context of the operator.
- **op_output** – The output context of the operator.
- **context** – The execution context of the operator.

`virtual void stop() override`

Implement the shutdown logic of the operator.

This method is called multiple times over the lifecycle of the operator according to the order defined in the lifecycle, and used for heavy deinitialization tasks such as deallocation of all resources previously assigned in start.

`void async_ping()`
