Enum ParameterFlag

Table of contents

- Defined in File parameter.hpp

Enum Documentation

enum class holoscan::ParameterFlag

Enum class to define the type of a parameter.

The parameter flag can be used to control the behavior of the parameter.

Values:

enumerator kNone

The parameter is mandatory and static. It cannot be changed at runtime.

enumerator kOptional

The parameter is optional and might not be available at runtime. Use `Parameter::try_get()` to get the value.

enumerator kDynamic

The parameter is dynamic and might change at runtime.
