

Function holoscan::inference::processor_validity_check

Table of contents

Function Documentation

- Defined in [File holoinfer_utils.hpp](#)

Function Documentation

InferStatus holoscan::inference::processor_validity_check(const [MultiMappings](#) &processed_map, const std::vector<std::string> &in_tensor_names, const std::vector<std::string> &out_tensor_names)

Checks for correctness of processing parameters from configuration.

Parameters

- **processed_map** – [Map](#) with input tensor name as key, mapped to vector of output tensor names
- **in_tensor_names** – Input tensor names
- **out_tensor_names** – Output tensor names
