Function holoscan::set_log_level

Table of contents

- Defined in File logger.hpp

Function Documentation

void holoscan::set_log_level(LogLevel level)

Set global logging level.

If the environment variable `HOLOSCAN_LOG_LEVEL` is set, the log level will be overridden by the value of the environment variable.

`HOLOSCAN_LOG_LEVEL` can be set to one of the following values:

- TRACE

- DEBUG

- INFO

- WARN

- ERROR

- CRITICAL

- OFF

```
export HOLOSCAN_LOG_LEVEL=TRACE
```

Parameters

level – The new log level.
