

**Jobs**

## Note

All information provided in a tabular format in UFM web UI can be exported into a CSV file.

The Jobs window displays all of UFM running Jobs. A Job is a running task defined by the user and applied on one or more of the devices (provisioning, software upgrade, firmware upgrade, reboot, etc.).

UFM users can monitor the progress of a running job, as well as the time it was created, its last update description and its status. The status value can be "Running" (during operation) "Completed with Errors", in case an error has occurred, and "Completed."

ID ↓ 1	Description	Created ↓ 2	Last Update ↓ 3	Status	Summary	Progress
34	running user defined ibdiagnet...	2022-04-28 17:22:13	2022-04-28 17:22:16	Completed	<a href="#">View Summary</a>
