

Docker Using SR-IOV

In this mode, Docker engine is used to run containers along with SR-IOV networking plugin. To isolate the virtual devices, `docker_rdma_sriov` tool should be used. This mode is applicable to both InfiniBand and Ethernet link layers.

To obtain the plugin, visit: hub.docker.com/r/rdma/sriov-plugin

To install the `docker_rdma_sriov` tool, use the container tools installer available via hub.docker.com/r/rdma/container_tools_installer

For instructions on how to use Docker with SR-IOV, refer to [Docker RDMA SRIOV Networking with ConnectX4/ConnectX5/ConnectX6](#) Community post.
