Wake-on-LAN (WoL)

Wake-on-LAN (WoL) is a technology that allows a network professional to remotely power on a computer or to wake it up from sleep mode.

- To enable WoL:

  ```
  ethtool -s <interface> wol g
  ```

- To get WoL:

  ```
  ethtool <interface> | grep Wake-on Wake-on: g
  ```

  Where:
  "g" is the magic packet activity.
