Release Notes Update History

Version	Date	Description
22.41.100	May 05, 2024	Initial release of this Release Notes version, This version introduces <u>Changes and New Features</u> and <u>Bug</u> <u>Fixes</u> .

Overview

Firmware which is added at the time of manufacturing, is used to run user programs on the device and can be thought of as the software that allows hardware to run. Embedded firmware is used to control the functions of various hardware devices and systems, much like a computer's operating system (OS) controls the function of software applications. Firmware may be written into read-only memory (ROM), erasable programmable readonly memory (EPROM) or flash memory.
