#### Introduction

The NVIDIA MMS4A00 is a 1600Gb/s 2xDR4, single mode optical transceiver supporting the XDR 800Gb/s InfiniBand protocol. The line rate is 200Gb/s using Pulse Amplitude Modulation at 4-channels denoted as 200G-PAM4 enabling two data bits to transfer per clock pulse.

The electrical configuration is 8-channels of 200G-PAM4. Optical configuration is based on two Datacenter Reach, 4-channel (2xDR4), 800Gb/s optical connectors.

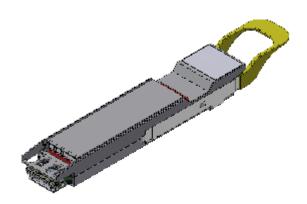

Optical connectors are Multiple Push-On 12-fiber, Angled Polished Connector or MPO-12/APC. Two MPO-12/APC optical connectors are used per transceiver.

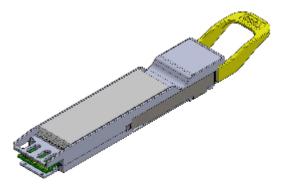

The 2x800G transceiver engine enables the InfiniBand Quantum-X800 QM3400, 72-cage switch to support 144-ports of 800Gb/s.

Based on 9-um, single mode fibers, the main application is linking two switches together up to 500-meters, or to two 800G links to two switches or network adapters for storage and compute servers. The 500-meter length assumes two optical patch panels or four optical connectors in the link.

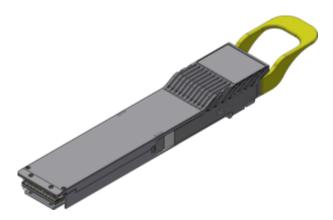

NVIDIA's transceivers quarantee optimal operation in NVIDIA end-to-end InfiniBand systems, and rigorous production testing ensures the lowest bit error rates, low-latency, and best out-of-the-box installation experience, performance, and durability.

Riding Heat Sink (RHS) Flat Top Transceiver (this version is planned for future setups)

## Note

Images are for illustration purposes only. Product manufacturing sites, labels, colors, and dimensions may vary.

#### **Key Features**

- 1600Gb/s single mode transceiver
- 8-channels of 200G-PAM4 electrical modulation
- Two ports of 4-channel 200G-PAM4 optical modulation
- Two MPO-12/APC optical connectors
- 1310nm laser

- Maximum reach: 500-meters
- 33.5W max power
- Single 3V power supply
- Class 1 laser safety
- Hot pluggable, RoHS compliant
- Supports CMIS 4.0
- Case temperature range of 20°C to +70°C
- Secure Firmware boot and update features

#### **Applications**

• Used in Quantum-3 air-cooled and liquid-cooled switch

# **OSFP Module Pad Layout**

The Active Optical Cable (AOC) pin assignment is SFF-8679 compliant.

# **Control Signals (OSFP)**

This device supports CMIS 4.0 management interface, with an OSFP form factor and interfaces. This implies that the control signals shown in the pad layout are implemented with the following functions:

Name	Function	Description
LPWn/PRSn	Input/output	Multi-level signal for low power control from host to module and module presence indication from module to host. This signal requires the circuit as described in the OSFP Specification.

Name	Function	Description
INT/RSTn	Input,/output	Multi-level signal for interrupt request from module to host and reset control from host to module. This signal requires the circuit as described in the OSFP Specification.
SCL	BiDir	2-wire serial clock signal. Requires pull-up resistor to 3.3V on host.
SDA	Bidir	2-wire serial data signal. Requires pull-up resistor to 3.3V on host.

## **Diagnostics and Other Features**

The transceiver has a microcontroller with functions for monitoring supply voltage, temperature, laser bias current, optical transmit and receive levels with associated warning and alarm thresholds that can be read by the switch software and viewed remotely.

The transceiver supports the following key features from the OSFP MSA specification:

Physical layer link optimization:

- Adaptive Tx input equalization
- Programmable Rx output amplitude
- Programmable Rx output pre-cursor
- Programmable Rx output post-cursor

Digital Diagnostic Monitoring (DDM):

- Rx receive optical power monitor for each lane
- Tx transmit optical power monitor for each lane
- Tx bias current monitor for each lane
- Supply voltage monitor
- Transceiver case temperature monitor
- Warning and Alarm thresholds for each DDM function (not user programmable)

#### Page 13h and 14h Module Diagnostics

- Host side and line side loopback
- PRBS generator and checker on host and line interfaces

#### Interrupt indications:

- Tx & Rx LOS indication
- Tx & Rx LOL indication
- Tx fault indication

#### Other CMIS functions

• FW upgrade supported via CDB commands.

# **Specifications**

# **Absolute Maximum Specifications**

Absolute maximum ratings are those beyond which damage to the device may occur.

Prolonged operation between the operational specifications and absolute maximum ratings is not intended and may cause permanent device degradation.

Parameter	Symbol	Min	Max	Units
Storage Temperature	T <sub>S</sub>	-40	85	°C
Operating Case Temperature	T <sub>OP</sub>	20	64	°C
Supply Voltage	Vcc	-0.5	3.6	V
Relative Humidity (non-condensing)	RH - Option 1	5	85	%
Control Input Voltage	VI	-0.3	Vcc+0.5	V

#### (i) Note

- Pluggable power down is allowed only 500usec after reset assert.
- Module temperature per DDMI readout of up to 75°C is allowed.

# **Recommended Operating Conditions and Power Supply** Requirements

Parameter	Symbol	Min	Тур	Max	Units
Power Supply Voltage	VCC	3.135	3.3	3.465	V

Parameter	Symbol	Min	Тур	Max	Units
Instantaneous peak current - High- Power Mode transmitters on	ICC_IP_HP	_	-	13400	mA
Sustained peak current a High-Power Mode transmitters on	ICC_SP_HP	_	-	11165	mA

Signaling Rate per Lane	SRL	-	106.25	-	GBd
Two Wire Serial Interface Clock Rate	-	100	-	1000	kHz
Power Supply Noise Tolerance (10Hz - 10MHz)	-	-	-	25	mV
Rx Differential Data Output Load	-	-	100	-	Ohm
Operating Distance	-	-	-	500	m

<sup>\*</sup> From High-Power Mode Transmitters ON due to Host Power Down

# **Electrical Specifications**

Parameter	Symbol	Min	Тур	Max	Units
Receiver (Module Output)					
Peak-peak AC common-mode voltage	VCMLF VCMFB	-	-	33 80	mV
Differential output Voltage (Long mode)		-	-	845	mV
Differential output Voltage (Short mode)		-	-	600	mV
Eye height, differential		15	-	-	mV

<sup>\*\*</sup> From High-Power Mode Transmitters ON due to Hot Unplug

Parameter	Symbol	Min	Тур	Max	Units	
Differential Termination Mismatch		_	-	10	%	
Transition Time (min, 20% to 80%)		8.5	-	-	ps	
DC common mode Voltage		-350	-	2850	mV	
Transmitter (Module Input)						
Differential pk-pk input Voltage tolerance		750	-	-	mV	
Differential termination mismatch		_	-	10	%	
Single-ended voltage tolerance range		-0.4	-	3.3	V	
DC common mode Voltage		-350	-	2850	mV	

#### Notes:

Amplitude customization beyond these specs is dependent on validation in customer system.

# **Electrical Specification for Low Speed Signal**

Parameter	Symbol	Min	Max	Units
Module output SCL and SDA	VOL	0	0.4	V
	VOH	VCC-0.5	VCC+0.3	V
Module Input SCL and SDA	VIL	-0.3	VCC*0.3	V
	VIH	VCC*0.7	VCC+0.5	V

# **Optical Specifications**

Parameter	Symbol	Min	Тур	Max	Unit	Notes
Transmitter						
Wavelength	λС	1304.5	1311	1317.5	nm	
Side Mode Suppression Ratio	SMSR	30	-	-	dB	
Average Launch Power, each lane	AOPL	2.5	3.5	4.0	dBm	1, 6

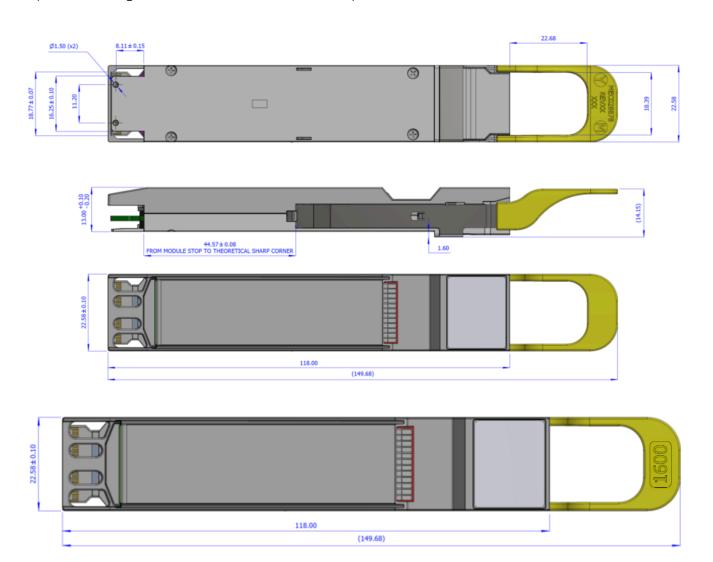

Parameter	Symbol	Min	Тур	Max	Unit	Notes
Outer Optical Modulation Amplitude (OMAouter), each lane	TOMA	1.0	3.0	5.0	dBm	2, 6
Launch Power in terms of OMAouter minus TDECQ, each lane	TOMA- TDECQ	-	_	-	dBm	
Transmitter and Dispersion Eye Closure for PAM4 (TDECQ), each lane	TDECQ	-	-	-	dB	
Average Launch Power of OFF Transmitter, each lane	TOFF	-	-	-15	dBm	
Extinction Ratio, each lane	ER	3.5	-	-	dB	6
RIN21.40MA	RIN	-	-	-139	dB/Hz	
Optical Return Loss Tolerance	ORL	_	-	21.4	dB	
Transmitter Reflectance	TR	-	-	-26	dB	3
Receiver						
Wavelength	λС	1304.5	1311	1317.5	nm	
Damage Threshold, average optical power, each lane	AOPD	5	-	-	dBm	
Average Receive Power, each lane	AOPR	-1.0	_	4.0	dBm	6
Receive Power (OMAouter), each lane	OMA-R	-	-	5.0	dBm	
Receiver Reflectance	RR	_	_	-26	dB	
Receiver Sensitivity (OMAouter), each lane	SOMA	-	-	-	dBm	4
Stressed Receiver Sensitivity (OMAouter), each lane	SRS	-	-	-	dBm	5
Conditions of stressed receiver sensitivity test						
Stressed eye closure for PAM4 (SECQ)			3.4		dB	
OMAouter of each aggressor lane			4.2		dBm	

#### Notes:

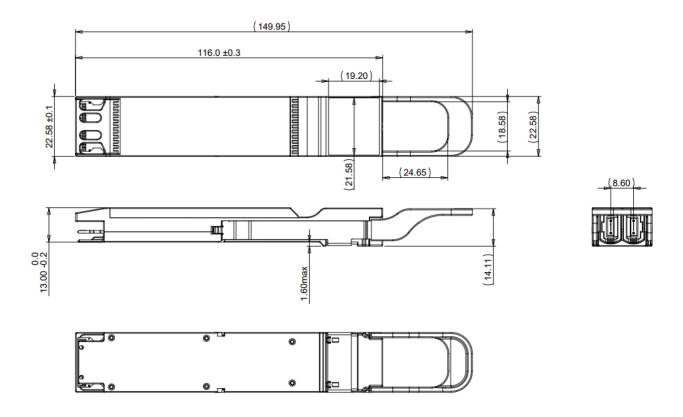

- 1. Average launch power, each lane (min) is informative and not the principal indicator of signal strength.
- 2. Even if TDECQ < 1.4dB, OMAouter (min) must exceed this value.
- 3. Transmitter reflectance is defined looking into the transmitter.
- 4. Receiver sensitivity (OMAouter), each lane (max) is informative and is defined for a transmitter with SECQ of 0.9 dB.
- 5. Measured with conformance test signal at TP3 for the BER = 2.4x10-4
- 6. Measured at BER 1x10-6 and Error free post FEC

#### **Transceiver Back-Shell Label Serial Number Legend**

Symbol	Meaning	Notes		
MT	Manufacturer name	2 digits (alphanumeric)		
YY	Year of manufacturing	2 last digits of the year (numeric)		
WW	Week of manufacturing	2 digits (numeric)		
XX	Manufacturer Site (FT)	Two characters		
SSSSS	Serial number	5 digits (decimal numeric) for serial number, starting from 00001.		

#### **Regulatory Compliance**

The transceiver is a Class 1 laser product. It is certified per the following standards:

Feature	Agency	Standard
Laser Eye Safety	FDA/CDRH	CDRH 21 CFR 1040 and Laser Notice 50
Electrical Safety	СВ	IEC 62368
Electrical Safety	UL/CSA	UL 62368 and CAN/CSAN 62368

## **Connector and Cabling Details**

# MPO-12/APC Optical Connector

The Twin-port transceiver has a unique NVIDIA patented design enabling two, multiple-push-on/angled-polished-connector 12-fiber (MPO-12/APC) optical connectors per single OSFP form-factor by turning the optical connectors vertically in the twin-port transceiver end. This enables it to host two transceivers inside, each with its own MPO-12/APC optical connector operating independently that can link to another Twin-port transceiver or to a single-port transceiver.

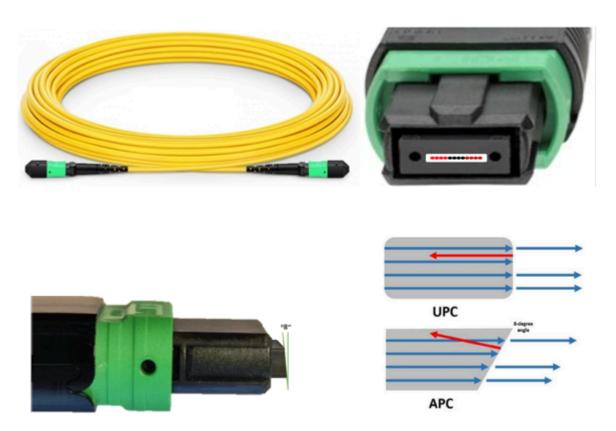

The MPO-12 has a 12-fiber ribbon but only 8-fibers are used – four transmit and four receive fibers for the 8-channels 200G-PAM4.

- The APC design minimizes back reflections and signal interference by diverting back reflected light from the fiber face to be absorbed into the fiber cladding.
- A positioning key on top of the connector together with the alignment pins define the fiber position numbering scheme to align pin 1 in the optical connector to pin 1 in the transceiver also called "polarity"
- Transceivers have alignment pins for precise positioning of the cable connector against the optical beams. The fiber cable has alignment holes matching the transceiver's pins.
- Important to note that transceivers have pins. Optical connectors have holes used with transceivers have holes. Optical connectors with pins are not compatible with transceivers and used in trunk cabling to connect two fiber cables together.

The MPO-12/APC optical connector is used in both the 200G-PAM4 based single mode and multimode fiber cables.

Single mode optics is denoted by a yellow-colored pull tab and yellow-colored optical fiber. Green plastic shell on the MPO-12/APC connector denotes Angled Polish Connector and is not compatible with Ultra-flat Polished Connectors (UPC) used with slower line rate transceivers.

#### MPO-12/APC Showing 4-Transmit and 4-Receive Fibers and Angled Polish Connector End face

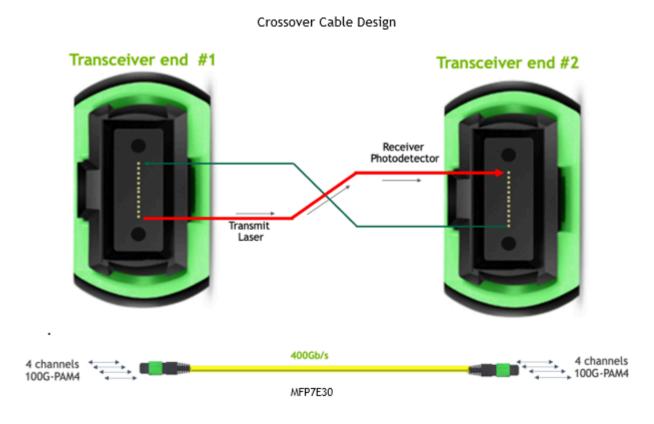

#### **NVIDIA Supplied Crossover Type-B Fiber Cables**

Linking two transceivers directly together requires aligning the transceiver laser sources with the correct photo detectors in the receive transceiver. Transmit and receive fibers are switched inside the cable enabling two transceivers to be directly connected to each other. This is called a Type-B crossover fiber.

Each of the two 4-channel XDR ports in the Twin-port transceiver has its own 4-channel optical cable that can link to two single-port 800Gb/s transceiver. Two fiber cables are needed for each Twin-port transceiver. Fiber cables are crossover cable Type-B that aligns the transmit laser with the opposite transceiver's receiver photodetector allowing to directly connect two transceivers together to maintain minimum optical losses, lowest

back reflections, longest reach and increased reliability without the use of optical patch panels.

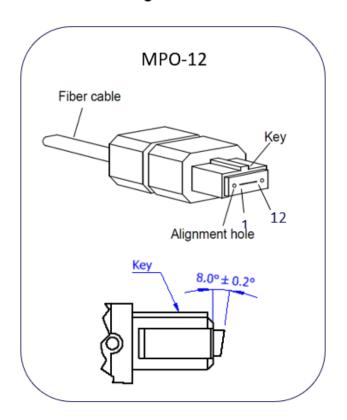

NVIDIA supplies crossover, single mode fiber cables up to 100-meters. For length from 100-to-500-meters, a crossover fiber segment must be implemented in the link to align transmit lasers with receiver photodetectors. This can be implemented by building the fiber cable as a crossover cable, or adding a NVIDIA crossover cable in the link, or via an optical patch panel with a crossover segment.

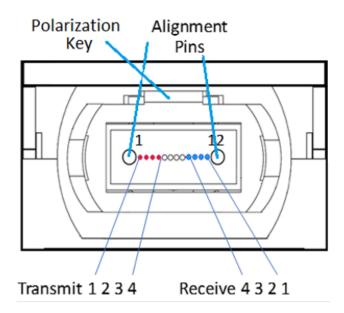

Note: Refer to the Recommended Fiber Cables table for more information.

Transceivers have alignment pins for precise positioning of the cable connector against the optical beams. The fiber cable has alignment holes matching the transceiver's pins.

MPO Connector with Alignment Holes and Positioning Key

Reference: IEC specification IEC 61754-7

#### **Handling and Cleaning**

The transceiver can be damaged by exposure to current surges and over voltage events. Take care to restrict exposure to the conditions defined in Absolute Maximum Ratings. Observe normal handling precautions for electrostatic discharge-sensitive devices.

The transceiver is shipped with dust caps on both the electrical and the optical port. The cap on the optical port should always be in place when there is no fiber cable connected. The optical connector has a recessed connector surface which is exposed whenever it has no cable nor cap.

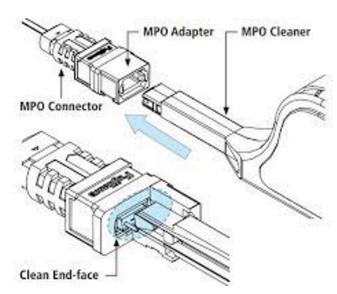

Important note 1: Keep both the fiber and transceiver dust caps.

Important note 2: <u>Clean both transceiver receptacle and cable connector</u> prior to insertion of the fiber cable, to prevent contamination from it.

The dust cap ensures that the optics remain clean during transportation. Standard cleaning tools and methods should be used during installation and service. Liquids must not be applied.

Important note 3: 80% of transceiver link problems are related to dirty optical connectors.

# **Cable Management Guidelines**

For more information and general interconnect management and installation, see <u>NVIDIA</u> <u>Cable Management Guidelines and FAQ Application Note</u>.
