Chapter 1. CUDA 11.1 Release Notes

1.1. CUDA Toolkit Major Component Versions

 CUDA Components

Starting with CUDA 11, the various components in the toolkit are versioned independently. For CUDA 11.1, the table below indicates the versions:

<table>
<thead>
<tr>
<th>Component Name</th>
<th>Version Information</th>
<th>Supported Architectures</th>
</tr>
</thead>
<tbody>
<tr>
<td>CUDA Runtime (cudart)</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>cuobjdump</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUPTI</td>
<td>11.1.69</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA Demo Suite</td>
<td>11.1.74</td>
<td>x86_64</td>
</tr>
<tr>
<td>CUDA GDB</td>
<td>11.1.69</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA Memcheck</td>
<td>11.1.69</td>
<td>x86_64, POWER</td>
</tr>
<tr>
<td>CUDA NVCC</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA nvdisasm</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA NVML Headers</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA nvprof</td>
<td>11.1.69</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA nvprune</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA NVRTC</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA NVTX</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA NVVP</td>
<td>11.1.74</td>
<td>x86_64, POWER</td>
</tr>
<tr>
<td>CUDA Samples</td>
<td>11.1.74</td>
<td>x86_64, POWER, Arm64</td>
</tr>
<tr>
<td>CUDA Compute Sanitizer API</td>
<td>11.1.49</td>
<td>x86_64, POWER, Arm64</td>
</tr>
</tbody>
</table>
CUDA Driver

Running a CUDA application requires the system with at least one CUDA capable GPU and a driver that is compatible with the CUDA Toolkit. See Table 2. For more information various GPU products that are CUDA capable, visit https://developer.nvidia.com/cuda-gpus.

Each release of the CUDA Toolkit requires a minimum version of the CUDA driver. The CUDA driver is backward compatible, meaning that applications compiled against a particular version of the CUDA will continue to work on subsequent (later) driver releases.

Note: Starting with CUDA 11.0, the toolkit components are individually versioned, and the toolkit itself is versioned as shown in the table below.

Table 2. CUDA Toolkit and Compatible Driver Versions

<table>
<thead>
<tr>
<th>CUDA Toolkit</th>
<th>Linux x86_64 Driver Version</th>
<th>Windows x86_64 Driver Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>CUDA 11.1</td>
<td>&gt;=455.23</td>
<td>&gt;=456.38</td>
</tr>
<tr>
<td>CUDA 11.0.3 Update 1</td>
<td>&gt;= 450.51.06</td>
<td>&gt;= 451.82</td>
</tr>
<tr>
<td>CUDA 11.0.2 GA</td>
<td>&gt;= 450.51.05</td>
<td>&gt;= 451.48</td>
</tr>
<tr>
<td>CUDA 11.0.1 RC</td>
<td>&gt;= 450.36.06</td>
<td>&gt;= 451.22</td>
</tr>
<tr>
<td>CUDA 10.2.89</td>
<td>&gt;= 440.33</td>
<td>&gt;= 441.22</td>
</tr>
<tr>
<td>CUDA 10.1 [10.1.105 general release, and updates]</td>
<td>&gt;= 418.39</td>
<td>&gt;= 418.96</td>
</tr>
<tr>
<td>CUDA 10.0.130</td>
<td>&gt;= 410.48</td>
<td>&gt;= 411.31</td>
</tr>
</tbody>
</table>
1.2. General CUDA

- Added support for NVIDIA Ampere GPU architecture based GA10x GPUs (compute capability 8.6), including the GeForce RTX-30 series.
- Enhanced CUDA compatibility across minor releases of CUDA will enable CUDA applications to be compatible with all versions of a particular CUDA major release.
- CUDA 11.1 adds a new PTX Compiler static library that allows compilation of PTX programs using set of APIs provided by the library. See https://docs.nvidia.com/cuda/ptx-compiler-api/index.html for details.
- Added the 7.1 version of the Parallel Thread Execution instruction set architecture (ISA). For more details on new (sm_86 target, mma.sp) and deprecated instructions, see https://docs.nvidia.com/cuda/parallel-thread-execution/index.html#ptx-isa-version-7-1 in the PTX documentation.
- Added support for Fedora 32 and Debian 10.3 Buster on x86_64 platforms.
- Unified programming model for:
CUDA 11.1 Release Notes

- async-copy
- async-pipeline
- async-barrier (cuda::barrier)
- Added hardware accelerated sparse texture support.
- Added support for read-only mapping for cudaHostRegister.
- Multi-threaded launch to different CUDA streams is supported.
- CUDA Graphs enhancements:
  - improved graphExec update
  - external dependencies
  - extended memcpy APIs
  - presubmit
- Introduced new system level interface using /dev based capabilities for cgroups style isolation with MIG.
- Improved MPS error handling when using multi-GPUs.
- A fatal GPU exception generated by a Volta+ MPS client will be contained within the devices affected by it and other clients using those devices. Clients running on the other devices managed by the same MPS server can continue running as normal.
- Users can now configure and query the per-context time slice duration for a GPU via nvidia-smi. Configuring the time slice will require administrator privileges and the allowed settings are default, short, medium and long. The time slice will only be applicable to CUDA applications that are executed after the configuration is applied.
- Improved detection and reporting of unsupported configurations.

1.3.   CUDA Tools

1.3.1.  CUDA Compilers

- PTX Compiler is provided as a redistributable library.
- The following compilers are supported as host compilers in nvcc:
  - GCC 10.0
  - Clang 10.0

1.3.2.  CUDA Developer Tools

- For new features, improvements, and bug fixes in CUPTI, see the changelog.
- For new features, improvements, and bug fixes in Nsight Compute, see the changelog.
- Application replay for metric collection.
1.4. CUDA Libraries

1.4.1. cuFFT Library

- cuFFT is now L2-cache aware and uses L2 cache for GPUs with more than 4.5MB of L2 cache. Performance may improve in certain single-GPU 3D C2C FFT cases.
- After successfully creating a plan, cuFFT now enforces a lock on the cufftHandle. Subsequent calls to any planning function with the same cufftHandle will fail.
- Added support for very large sizes (3k cube) to multi-GPU cuFFT on DGX-2.
- Improved performance on multi-gpu cuFFT for certain sizes (1k cube).

1.4.2. cuSOLVER Library

- Added new 64-bit APIs:
  - cusolverDnXpotrf_bufferSize
  - cusolverDnXpotrf
  - cusolverDnXpotrs
  - cusolverDnXgeqrf_bufferSize
  - cusolverDnXgeqrf
  - cusolverDnXgetrf_bufferSize
  - cusolverDnXgetrf
  - cusolverDnXgetrs
  - cusolverDnXsyevd_bufferSize
  - cusolverDnXsyevd
  - cusolverDnXsyevdx_bufferSize
  - cusolverDnXsyevdx
  - cusolverDnXgesvd_bufferSize
  - cusolverDnXgesvd
- Added a new SVD algorithm based on polar decomposition, called GESVDP which uses the new 64-bit API, including cusolverDnXgesvdp_bufferSize and cusolverDnXgesvdp.

1.4.3. CUDA Math Library

- Added host support for half and nv_bfloat16 converts to/from integer types.
- Added __hcmadd() device only API for fast half2 and nv_bfloat162 based complex multiply-accumulate.
1.5. Deprecated Features

The following features are deprecated in the current release of the CUDA software. The features still work in the current release, but their documentation may have been removed, and they will become officially unsupported in a future release. We recommend that developers employ alternative solutions to these features in their software.

General CUDA

- Support for Ubuntu in IBM’s ppc64le platforms is deprecated in this release and will be dropped in a future CUDA release.

CUDA Tools

- Support for VS2015 is deprecated. Older Visual Studio versions including VS2012 and VS2013 are also deprecated and support may be dropped in a future release of CUDA.

CUDA Libraries

- The following cuSOLVER 64-bit APIs are deprecated:
  - cusolverDnPotrf_bufferSize
  - cusolverDnPotrf
  - cusolverDnPotrs
  - cusolverDnGeqrf_bufferSize
  - cusolverDnGeqrf
  - cusolverDnGetrf_bufferSize
  - cusolverDnGetrf
  - cusolverDnGetrs
  - cusolverDnSyevd_bufferSize
  - cusolverDnSyevd
  - cusolverDnSyevdx_bufferSize
  - cusolverDnSyevdx
  - cusolverDnGesvd_bufferSize
  - cusolverDnGesvd

1.6. Resolved Issues

1.6.1. General CUDA

- Fixed an issue that caused cuD3D11GetDevices() to return a misleading error code.
Fixed an issue that caused `cuda_ipc_open` to fail with CUDA_ERROR_INVALID_HANDLE.

Fixed an issue that caused the nvidia-ml library to be installed in a different location from the one specified in pkg-config.

Fixed an issue that caused some streaming apps to trigger CUDA safe detection.

Fixed an issue that caused unexpectedly large host memory usage when loading cubin.

Fixed an issue with the paths for `.pc` files in the CUDA SLES15 repo.

Fixed an issue that caused warnings to be considered fatal when installing nvidia-drivers modules with kickstart.

Resolved a memory issue when using `cudaGraphInstantiate`.

Read-only OS_DESCRIPTOR allocations are now supported.

Loading an application against the `libcuda.so` stub library now returns a helpful error message.

The `cudaOccupancy` API is now available even when `__CUDA_ACC__` is not defined.

### 1.6.2. CUDA Tools

- When tracing graphs, grid/block dimensions showed in nvvp and nsight-sys were not always correct. This has been resolved.
- Fixed an issue that prevented profiling with nvprof without setting `LD_LIBRARY_PATH` to the `lib64` folder.
- The Visual Profiler “Varying Register Count” graph’s x-axis has changed from 65536 to 255 and the device limit is now 255.
- Added `nvswitch` init error checking improvements for DMA, MSI, and SOE.
- Improved detection and reporting of unsupported configurations.

### 1.6.3. cuBLAS Library

- A performance regression in the `cublasCgetrfBatched` and `cublasCgetriBatched` routines has been fixed.
- The IMMA kernels do not support padding in matrix C and may corrupt the data when matrix C with padding is supplied to `cublasLtMatmul`. A suggested work around is to supply matrix C with leading dimension equal to 32 times the number of rows when targeting the IMMA kernels: `computeType = CUDA_R_32I` and `CUBLASLT_ORDER_COL4_4R2_8C` for matrices A, C, D, and `CUBLASLT_ORDER_COL4_4R2_8C` (on NVIDIA Ampere GPU architecture or Turing architecture) or `CUBLASLT_ORDER_COL32_2R_4R4` (on NVIDIA Ampere GPU architecture) for matrix B. `Matmul` descriptor must specify `CUBLAS_OP_T` on matrix B and `CUBLAS_OP_N` (default) on matrix A and C. The data corruption behavior was fixed so that `CUBLAS_STATUS_NOT_SUPPORTED` is returned instead.
- Fixed an issue that caused an Address out of bounds error when calling `cublasSgemm()`.
- A performance regression in the `cublasCgetrfBatched` and `cublasCgetriBatched` routines has been fixed.
1.6.4. cuFFT Library

- Resolved an issue that caused cuFFT to crash when reusing a handle after clearing a callback.
- Fixed an error which produced incorrect results / NaN values when running a real-to-complex FFT in half precision.

1.7. Known Issues

1.7.1. cuFFT Library

- cuFFT will always overwrite the input for out-of-place C2R transform.
- For cuFFT’s 1D multi-GPU transforms, cufftXtSetGPUs whichGPUs parameter needs to enumerate the first N GPUs, rather than arbitrary GPUs.
